MJ-05 Section 4 Product # 29

Product Name:	Cannabis Chews
Type:	Edible
Product Description Details must include the color, shape, and texture.	Approximately ½" x ½" in size, round, soft and chewy texture.
Ingredients This box is not applicable to marijuana concentrates	• ¾-1 cup Cannabis Tincture • 1 cup fruit juice, chilled • ¼ cup +2 tablespoons orange blossom honey • 4 packages (3 ounces/85g each) flavored gelatin • 10 envelopes (2¼ ounces/63.5g total) unflavored gelatin • 1 tablespoon flavor extract • 1 tablespoon Tart & Sour
Standard Production Procedure and Detailed Manufacturing Process:	- The chews will be produced using the Cannabis Tincture once all testing reports have been received. Then a batch will be made following these steps: a. In a large, nonstick sauté pan on low heat, reduce tincture until almost all the alcohol has evaporated, creating *Essential Oil.* It should look like molasses. b. Add flavor extract, 2 tablespoons of honey and Tart & Sour, and swirl the pan in a circular motion until it again resembles molasses; then remove it from heat. c. Stir the remaining honey and the chilled fruit juice together and add into the pan. d. In a large bowl, whisk all the gelatins and sweetener together; then whisk the gelatin mix into the pan, and combine them completely. e. After allowing it to sit for 15-20 minutes, begin to cook the mixture over medium-low heat. f. Once the mixture begins to melt, stir constantly for 7-10 minutes, or until the gelatin and sweetener have completely dissolved. g. Using a large measuring cup with a pour spout, transfer the mixture into molds, and refrigerate them for 45-60 minutes. h. After chews have cooled completely, package. - A sample from this batch will be sent to a marijuana testing facility with a travel manifesto. This batch will be packaged, labeled with METRC label, and stored in the locked, secure storage room. - Once the sample is cleared through the testing facility, labels will be made and placed on the stored, segregated chews batch and then moved to the retail space.

MJ-05 Section 4 Product #30

Product Name:	Canna-Drops
Type:	Edible
Product Description Details must include the color, shape, and texture.	Approximately ½" x ½" in size, oval, hard texture.
Ingredients This box is not applicable to marijuana concentrates	• ½-1 cup Cannabis Tincture, • 2¼ cups granulated sugar • 1½ cup Hi Sweet Powder (powdered corn syrup) • ½ cup warm water • 2 tablespoons LorAnn Oil (super strength flavor) • 1 tablespoon Tart & Sour 5-10 • drops food coloring
Standard Production Procedure and Detailed Manufacturing Process:	- The drops will be produced using the Cannabis Tincture once all testing reports have been received. Then a batch will be made following these steps: a. In a 1-quart non-stick saucepan set to low heat, reduce Cannabis Tincture to Essential Oil by simmering until almost all the alcohol has evaporated (about 15-20 minutes), producing a syrupy consistency and appearance, like molasses. i. Add the flavor extract. Continuously swirl the pan in a gentle, circular motion until it returns to the molasses-like state. j. Add the Tart & Sour liquid. Remove the pan from heat, and set it aside. k. In a large saucepan over medium heat, mix the sugar, corn syrup, and water, stirring until the sugar is completely dissolved. l. Bring the mixture to a boil without stirring. Insert the candy thermometer, carefully preventing it from touching the bottom of the pan. Continue to boil without stirring until the temperature reaches 260°F/125°C. Then add food coloring; do not stir. m. Continue to boil the candy until just before thermometer reads 300°F/150°C; then remove it from heat. n. Let the mixture cool down to 260-270°F/125-130°C; then add the flavoring, and quickly whisk the mixture to ensure proper distribution within each piece. The mixture will bubble up, so be careful, and stir briskly but thoroughly. o. Quickly pour the liquid candy into prepared molds, and let it sit at room temperature for 5 minutes; then refrigerate it for 15-20 minutes. p. Once cooled completely, packaged. - A sample from this batch will be sent to a marijuana testing facility with a travel manifesto. This batch will be packaged, labeled with METRC label, and stored in the locked, secure storage room. - Once the sample is cleared through the testing facility, labels will be made and placed on the stored, segregated drops batch and then moved to the retail space.

Product Name:	Cannabis Bars
Type:	Edible
Product Description Details must include the color, shape, and texture.	2"x 2" square, dark brown and light brown, creamy in texture.
Ingredients This box is not applicable to marijuana concentrates	• ½ cup Canna - Oil • ⅓ cup Peanut butter • 1 Egg • 1 cup Brown sugar • 1tsp Vanilla extract • 1 cup All purpose flour • 1 cup Semi sweet choc chips
Standard Production Procedure and Detailed Manufacturing Process:	- The sauce will be produced using the Cannabis Oil once all testing reports have been received. Then a batch will be made following these steps: a. Pre-heat the oven to 350 degrees. Oil the baking pan and keep aside. b. In a mixing bowl, add the marijuana-infused oil, an egg, peanut butter, brown sugar, a little vanilla extract and blend the whole thing with a hand mixer until it is nice and smooth like candy. c. Add the flour and blend it into the above mixture until it is fully incorporated into it. d. Add chocolate chips and distribute it so that it is evenly spread out. e. Pour this dough into the pre- greased pan and pat it so that it is evenly spread. f. Put this into the oven and set the timer for 20-25 minutes. Check whether it's done by using the fork. If it comes out clean, take the bowl out from the oven and place it on a wire rack to cool. g. After 30 minutes, add serving line and cut the mixture into bars 2"x 2" and package. - A sample from this batch will be sent to a marijuana testing facility with a travel manifesto. This batch will be packaged, labeled with METRC label, and stored in the locked, secure storage room. - Once the sample is cleared through the testing facility, labels will be made and placed on the stored, segregated sauce batch and then moved to the retail space.

MJ-05 Section 4 Product # 36

Product Name:	Frozen Budz Ice Cream
Type:	Edible
Product Description Details must include the color, shape, and texture.	½ cup serving, dark brown, soft and creamy texture.
Ingredients This box is not applicable to marijuana concentrates	• I ounce of cannabis • 8 cups of heavy whipping cream • 4 cups of half and half • 4 cups of whole milk • 1 tablespoon of vanilla extract • 12 egg yolks, beaten slightly • 6 cups of sugar • 1 teaspoon of salt • ½ cup of unsweetened cocoa powder • ¾ cup of lecithin granules • 10 oz of chopped bittersweet chocolate • 1 and ½ cup water • Ice • Rock salt
Standard Production Procedure and Detailed Manufacturing Process:	- The ice cream will be produced using cannabis once all testing reports have been received. Then a batch will be made following these steps: a. Grind the cannabis buds in a coffee grinder. Evenly spread the powder on a cookie sheet and place in an oven for 8 minutes at 275°F. This process is known as decarboxylation. b. Remove from oven and place in a bowl with 1 and ½ cup of water. Allow it to soak for 30 minutes. This will remove the unwanted plant taste from getting into the ice-cream. c. In a large heavy bottomed stock pot add 8 cups of heavy cream and 2 cups of half and heat on medium. Once the mixture thickens lower the heat and let it simmer, stirring occasionally. d. In the meantime take the soaking cannabis and strain out the water using a coffee filter. Add the strained water and the buds to the simmering cream and stir. e. After an hour remove from heat and strain the cream mixture through cheesecloth or a mesh strainer. f. Cool in the refrigerator for about 2 hours. g. In a separate pot combine milk, sugar, salt, unsweetened cocoa powder and lecithin granules. Stir and place the pot over medium heat. Stir constantly. Bring the mixture to a simmer. h. Place the egg yolks in another bowl. Pour two cups of this heated milk mixture into the egg yolks to temper them. Ensure that the eggs do not cook. Pour this egg mixture back into the original milk mixture. Continue to heat the mixture until it thickens but do not boil. i. Remove from the heat and stir in the chopped chocolate till chocolate melts.

MJ-05 Section 4 continued Product # 36

	j. Pour the chocolate mixture into a chilled bowl and refrigerate for about 2 hours until cold, stirring occasionally. k. When the chocolate mixture has completely cooled, stir in the cream mixture and vanilla essence. l. Pour the entire mix into an ice cream maker and follow the manufacturer's instructions. m. Once ice cream at the correct consistency, package into ½ cup ice cream cups, place in freezer. - A sample from this batch will be sent to a marijuana testing facility with a travel manifesto. This batch will be packaged, labeled with METRC label, and stored in the locked, secure storage room. - Once the sample is cleared through the testing facility, labels will be made and placed on the stored, segregated sauce batch and then moved to the retail space.

Product Name:	Frozen Budz Fudge
Type:	Edible
Product Description Details must include the color, shape, and texture.	1"x 1" square, dark brown, creamy texture.
Ingredients This box is not applicable to marijuana concentrates	• ¼ cup cannabis butter • 2 cups of granulated sugar • ½ a cup of cocoa • 1 cup of whole milk • Vanilla extract
Standard Production Procedure and Detailed Manufacturing Process:	- The fudge will be produced using Canna-Butter once all testing reports have been received. Then a batch will be made following these steps: a. Grease the baking tray and set it aside. b. Set the candy thermometer in the pot. Add the sugar, cocoa and milk to the pot and using the whisk stir them together in the pot. c. Turn the heat up to a medium flame and bring the mixture to a boil; constantly stirring it. Once the mixture boils, stop stirring it and reduce the flame. d. Simmer mixture until thermometer reaches 238 degrees Fahrenheit. e. Turn off the heat and let the mixture cool to well below 150 degrees Fahrenheit. f. Next, add the cannabis butter and 1 teaspoon of vanilla extract. Using the wooden spoon mix everything together well. g. Beat the mixture till it loses that glossy look and becomes thick and has a matt finish look. h. Now pour the mixture into the greased baking tray and put it in the fridge to cool for 30 to 40 minutes. i. Once the fudge has cooled properly and set, take it out of the fridge and tip it on to a cutting board. Cut it up into 1"x1" squares and package.
	- A sample from this batch will be sent to a marijuana testing facility with a travel manifesto. MJ-05 Section 4 Product # 38

Product Name:	Mary Jane's Macaroons
Type:	Edible
Product Description Details must include the color, shape, and texture.	1"x 1" round, dark brown, light fluffy texture.
Ingredients This box is not applicable to marijuana concentrates	• 1 and 1/3 cups of flaked coconut • 1/3rd cup of sugar • 2 tablespoons flour • Pinch of salt • Egg whites of 2 eggs • Vanilla extract • 2 tablespoons of cannabis butter • Baking chocolate or chocolate chips
Standard Production Procedure and Detailed Manufacturing Process:	- The macaroons will be produced using Canna-Butter once all testing reports have been received. Then a batch will be made following these steps: a. Preheat oven to 325 degrees and grease a large baking tray. b. Next combine together in a bowl the coconut, sugar, flour and salt. Mix well and break off any large lumps of coconut or flour. Once well mixed, set aside and move on to the egg whites. c. Crack the eggs and separate the egg whites from the yolk into a bowl. Add half a teaspoon of vanilla extract to the egg whites. Whip the egg whites with an electric hand mixer. d. Now add the whisked egg whites and vanilla extract mixture to the dry coconut and flour mix and combine the dry and wet ingredients together by tossing them with wooden spoons. e. Once the mixture is ready put one tablespoon scoops of the mixture on the greased biscuit tray. f. Put the tray into the preheated oven for 15 to 18 minutes till the macaroons are golden brown. g. Next get to the marijuana chocolate. Prepare a double boiler and add the cannabis butter to the bowl and let it melt. Once the butter has melted, start adding the chocolate to the cannabis butter in the bowl. As it melts, incorporate it gently with the butter using a spatula to get a glossy mixture. h. Take macaroons out of the oven and let them cool for a few minutes before transferring them to a cooling wire rack. Meanwhile the chocolate sauce should be ready. Keep the flame on simmer so the sauce remains liquid. i. Once the macarons have cooled down they are ready to be dipped in the marijuana chocolate sauce. Hold them from the bottom and dip the tops gently into the sauce. j. Once cooled completely, package and refrigerate. - A sample from this batch will be sent to a marijuana testing facility with a travel manifesto. This batch will be packaged, labeled with METRC label, and stored in the locked, secure storage room. - Once the sample is cleared through the testing facility, labels will be made and placed on the stored, segregated sauce batch and then moved to the retail space.

MJ-05 section 4 Product #39

Product Name:	Bong Bread
Type:	Edible
Product Description Details must include the color, shape, and texture.	3"x 3" round rolls, light brown, light, fluffy texture.
Ingredients This box is not applicable to marijuana concentrates	• 3g of marijuana flowers that have been de-stemmed and deseeded • 3 cups of all purpose flour • flaxseed meal, for dusting • 1 and 1/4th teaspoon salt • 1/4th teaspoon active dry yeast • 1 and 3/4th cup of non scalding warm water
Standard Production Procedure and Detailed Manufacturing Process:	- The bread will be produced using cannabis once all testing reports have been received. Then a batch will be made following these steps: a. First, grind the marijuana flowers into a coarse mealy consistency. Preheat the oven to 220 degrees and decarb marijuana. b. The next step is to prepare the flour mix. Mix the flours, salt, yeast and marijuana in a bowl using a whisk. c. Then add the warm water (110 degrees) to the flour and mix it well. It will form a shaggy sort of dough. This is the time when the yeast will develop in the dough. d. Next knead dough and section into 3"x 3" dough balls. Cover dough and allow to rise for approximately 12 hours. e. Preheat the oven to 450 degrees. Put the metal pan in the oven to heat as well. f. Take the pan out carefully using oven mitts and put the dough into the pan with the seam side facing up. Cover with the lid and put it in the oven to bake for 30 minutes. g. After 30 minutes remove the lid off the pan and let the bread bake for about 5 to 10 minutes more. h. Carefully tip the bread onto a cooling wire rack and let it cool for 2 hours and then package. - A sample from this batch will be sent to a marijuana testing facility with a travel manifesto. This batch will be packaged, labeled with METRC label, and stored in the locked, secure storage room. - Once the sample is cleared through the testing facility, labels will be made and placed on the stored, segregated sauce batch and then moved to the retail space.

MJ-05 Section 4 Product #40

Product Name:	Ganja Granola Bars
Type:	Edible
Product Description Details must include the color, shape, and texture.	3'x1"x1 rectangle, dark green, crunchy, chewy texture.
Ingredients This box is not applicable to marijuana concentrates	• ½ cup of Canna-Oil • 3 cups of oatmeal • 1 cup of chopped nuts • Mix dried berries • 1 teaspoon baking soda • ½ cup of brown flaxseed meal • 1 and ½ teaspoons of cinnamon powder • ½ cup of honey • A pinch of salt
Standard Production Procedure and Detailed Manufacturing Process:	- The bars will be produced using Canna-Oil once all testing reports have been received. Then a batch will be made following these steps: a. Preheating your oven to 300 degrees Fahrenheit and lining a baking tray with parchment paper. b. Next mix all the dry ingredients together except the salt, that is, the oatmeal, chopped nuts, mixed berries, baking soda, flaxseed meal and cinnamon powder. c. Add melted Canna-Oil and honey, salt and flavourings to it and mix it well. d. Put the combined mixture into the tray lined with parchment paper. Spread the entire mixture evenly in the tray without pressing down on it. e. Bake for about 20 to 30 minutes and let it cook till it is golden brown. f. Take it out and once it cools a bit, shape the granola mix into bars 3"x1"x1" and add the serving size line. g. Once the bars are done leave them to cool properly and package. - A sample from this batch will be sent to a marijuana testing facility with a travel manifesto. This batch will be packaged, labeled with METRC label, and stored in the locked, secure storage room. - Once the sample is cleared through the testing facility, labels will be made and placed on the stored, segregated sauce batch and then moved to the retail space.

MJ-05 Section 4 Product #41

Product Name:	Chronic Creamer
Type:	Edible
Product Description Details must include the color, shape, and texture.	4 oz liquid, light green, smooth texture.
Ingredients This box is not applicable to marijuana concentrates	• 5 Cup Whole Milk • 5 Cup Heavy Cream • 1 Cup + 4 TBS Maple Syrup • 5 TBS Vanilla Extract • 5 grams Kief
Standard Production Procedure and Detailed Manufacturing Process:	- The creamer will be produced using kief once all testing reports have been received. Then a batch will be made following these steps: a. In a large pot, whisk together milk and heavy cream over low heat until simmering. b. Add kief and simmer on low heat for 25-45 minutes. Make sure to whisk milk, cream, and kief mixture very often while simmering to keep from burning. c. Add maple syrup and vanilla at end of simmer. Mix well; remove from heat. No need to strain as kief goes unnoticed in final product. d. Place contents in 4 oz bottles and store in fridge. - A sample from this batch will be sent to a marijuana testing facility with a travel manifesto. This batch will be packaged, labeled with METRC label, and stored in the locked, secure storage room. - Once the sample is cleared through the testing facility, labels will be made and placed on the stored, segregated sauce batch and then moved to the retail space.
