Alaska Marijuana Control Board

Operating Plan Supplemental

Form MJ-05: Marijuana Product Manufacturing Facility

What is this form?

This operating plan supplemental form is required for all applicants seeking a marijuana product manufacturing facility license and must accompany the **Marijuana Establishment Operating Plan (Form MJ-01)**, per 3 AAC 306.020(b)(11). Applicants should review **Chapter 306: Article 5** of the **Alaska Administrative Code.** This form will be used to document how an applicant intends to meet the requirements of those regulations. If your business has a formal operating plan, you may include a copy of that operating plan with your application, but all fields of this form must still be completed per 3 AAC 306.020 and 3 AAC 306.520(3).

What additional information is required for product manufacturing facilities?

Applicants must identify how the proposed establishment will comply with applicable regulations regarding the following:

- Prohibitions
- Equipment, compounds, and processes to be used
- Proposed marijuana concentrates and marijuana products
- Proposed product packaging and sample labels
- Waste disposal plan
- Testing

This form must be submitted to AMCO's main office before any marijuana product manufacturing facility license application will be considered complete.

Section 1 – Establishment Information

Enter information for the business seeking to be licensed, as identified on the license application.

Licensee:	ForgetMeNot Enterprises, Inc.	**License Number:**	13222		
License Type:	Marijuana Product Manufacturing Facility				
Doing Business As:	Southeast Essentials				
Premises Address:	8505 Old Dairy Rd, Suite 3				
City:	Juneau	**State:**	ALASKA	**ZIP:**	99801

Alaska Marijuana Control Board

Operating Plan Supplemental

Form MJ-05: Marijuana Product Manufacturing Facility

Section 2 – Prohibitions

Applicants should review 3 AAC 306.510 and be able to answer "Agree" to all items below.

The marijuana product manufacturing facility will not:	Agree	Disagree
Sell, deliver, distribute, or transfer any marijuana, marijuana concentrate, or a marijuana product directly to a consumer, with or without compensation	✓	
Allow any person, including a licensee, employee, or agent, to consume marijuana, marijuana concentrate, or a marijuana product on its licenses premises	✓	

The marijuana product manufacturing facility will not manufacture or sell any product that:	Agree	Disagree
Is an adulterated food or drink	✓	
Closely resembles a familiar food or drink item including candy	✓	
Is packaged to look like candy, or in bright colors or with cartoon characters or other pictures or images that would appeal to children	✓	

Section 3 – Equipment, Compounds, and Processes to be Used

Review the requirements under 3 AAC 306.555, and identify how the proposed premises will meet the listed requirements.

Describe the equipment and solvents, gases, chemicals, and other compounds the marijuana product manufacturing facility will use to create marijuana concentrates:

The extraction method and system Southeast Essential Manufacturing will be using is:

1. Bubble Bag Extraction - water, bags, ice, water and hand agitation.
2. CO2 Extraction - The Supercritical CO2 extraction process creates phase changes in carbon dioxide utilizing temperature and pressure. CO2 gas is used and is known as a "tunable solvent" making it extremely versatile for creating a multitude of end products by controlling temperature and pressure.
3. Rosin Press - hydrologically powered machines with heated plates to further refine and compress concentrate

Alaska Marijuana Control Board

Operating Plan Supplemental

Form MJ-05: Marijuana Product Manufacturing Facility

Describe the processes to be used to create marijuana concentrates:

Southeast Essential Manufacturing will create an assortment of marijuana products through the use of water, food, and solvent based extractions. The manufacturing facility will use only professional grade equipment systems with proper ventilation and control of all possible ignition sources. The professional grade equipment will be used in compliance with the manufacturer's stated pressure ratings and have certification from a licensed engineer that the system is commercially manufactured, is safe for its intended use, and is built to code and in compliance with local fire, safety, and building code requirements.

Bubble bag extraction is the process to be used to produce bubble hash. Marijuana plant material is first mixed with ice and water and then filtered through bubble bags (mesh bags of various sizes). The wet hash is then removed from the bags and allowed to dry overnight.

Supercritical carbon dioxide is a fluid state of CO2 (somewhere between a gas and a liquid) which is used as a solvent for extraction. The CO2 is pumped into an extraction vessel and as the marijuana plant material comes into contact with it, the oil is released into the CO2. Both the gas and oil come down into the a separation/collection vessel where the marijuana oil is released as a liquid and the CO2 gas is condensed back into a liquid and recirculated through a CO2 pump.

A hydraulic Rosin press is used to create rosin concentrate. Marijuana plant material or bubble hash is placed into nylon mesh bags or screens and then between parchment paper and into a pressurized heating device. The marijuana is pressed between two heated plates causing concentrate oil (rosin) to be squeezed onto the parchment paper.

All employees and agents operating, handling, inspecting, and cleaning the systems will be fully trained on how to use and maintain the system, and will have direct access to all applicable instructional and safety documents at all times. Each licensee, employee, or agent who is required or permitted to be physically present at the facility will have both a marijuana handler permit card and a food worker card on file on property prior to beginning work and at all times while on the premises. See following pages for process and description of creating products.

Section 4 – Proposed Marijuana Concentrates and Marijuana Products

Review the requirements under 3 AAC 306.520 - 3 AAC 306.525 and 3 AAC 306.560, and identify how the proposed establishment will meet the listed requirements. **Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.**

Product Name:	Glacier Dew Drops
Type:	Edible

Product Description: Details must include the color, shape, and texture.	Glacier Dew Drops will be 1/2" diameter, as well as a 1/2" in height. They will come in the color of a greenish blue hue, and the texture will be hard.

Ingredients: This box is not applicable to marijuana concentrates	Marijuana (oil or concentrate), sugar, corn syrup, water, food coloring, flavor extract (mint), citric acid powder

Standard Production Procedure and Detailed Manufacturing Process:	In a sauce pan combine sugar, marijuana, corn syrup, and water. Stir well, bring to a boil until it reaches 310 degrees. Remove from heat, stir in food coloring, flavoring, and citric acid. Pour molten candy into prepared cookie sheet. Turn candy out onto a cutting board, using a large knife, score candy slab into rows 1/2" apart.

Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Section 5 – Proposed Product Packaging and Sample Labels

Review the requirements under 3 AAC 306.520 and 3 AAC 306.565 – 3 AAC 306.570, and identify how the proposed establishment will meet the listed requirements. **Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.**

Product Name:	Glacier Dew Drops
Type:	Edible

Packaging Description: Details must include the color(s), size, packaging materials used, total amount of THC, individual serving sizes (if multiple), and other specifics showing compliance with 3 AAC 306.565. Attached photos, drawings, or graphic representations are preferred.	The Dew Drops will be wrapped in parchment paper to ensure a non-stick surface and to hold each unit in place. The drops and parchment paper will be placed into a food safe, child-resistant, zippered bag. The bags are made of an aluminum/plastic blend and are an opaque white color. The closure is a push-release, two-handed locking zipper. Approximate size of bags: 6" x 2 7/16" x 8" 1 serving = 1 capsule (5mg THC) 5 servings per package = 25 mg THC total per package	

Sample Labels:
Provide sample labels showing how the labeling information required in 3 AAC 306.570 will be set out.

Review the requirements under 3 AAC 306.520 - 3 AAC 306.525 and 3 AAC 306.560, and identify how the proposed establishment will meet the listed requirements. **Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.**

Product Name:	Chocolate Chip Cookie Bites
Type:	Edible

Product Description: Details must include the color, shape, and texture.	Cookie Bites will be a soft, chewy texture with a light brown color and round.

Ingredients: This box is not applicable to marijuana concentrates	Marijuana (oil), butter, sugar, brown sugar, eggs, vanilla extract, flour, baking soda, water, salt, semisweet chocolate chips.

Standard Production Procedure and Detailed Manufacturing Process:	Cream together the marijuana, butter, white sugar, and brown sugar until smooth. Beat in the eggs one at a time, then stir in the vanilla. Dissolve baking soda in hot water. Add to batter along with salt. Stir in flour, and chocolate chips. Drop by large spoonfuls onto un-greased pans. Bake for about 10 minutes in the preheated oven, or until edges are nicely browned.

Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Type:	Edible

Product Description: Details must include the color, shape, and texture.	Co2 Capsules will consist of ten (10) gel caps per package with each capsule containing five (5) mg of THC. The capsules are clear color with an oval shape. Once the product is inside the capsules, the color will change to a golden brown.

Ingredients: This box is not applicable to marijuana concentrates	Marijuana, coconut oil, gelatin capsules

Standard Production Procedure and Detailed Manufacturing Process:	Mix marijuana with oil into a crockpot and let simmer for four hours. Stir the mix every 30 minutes for the first half of the cook time. Cool off mixture, and strain through a cheese cloth and into a new bowl. Fill capsules using a syringe filled with the infused marijuana oil mixture. Once all capsules are full, use a capsule filling machine to close each capsule.

Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Section 5 – Proposed Product Packaging and Sample Labels

Review the requirements under 3 AAC 306.520 and 3 AAC 306.565 – 3 AAC 306.570, and identify how the proposed establishment will meet the listed requirements. **Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.**

Product Name:	Co2 Capsules
Type:	Edible

Packaging Description: Details must include the color(s), size, packaging materials used, total amount of THC, individual serving sizes (if multiple), and other specifics showing compliance with 3 AAC 306.565. Attached photos, drawings, or graphic representations are preferred.	Each package will contain 10 capsules that each contain 5mg of THC. The products will be placed into mylar packaging bags that will clearly have the logo and all necessary labels on the front side. A logo will be shown on each mylar packaging bag, and will have all necessary labels on the front side as well. The packaging size will be 6" X 9.5" X 2.33". All products will be placed in a mandatory exit bag before leaving the facility by consumers. 1 serving = 1 capsule (5mg THC)

Sample Labels:
Provide sample labels showing how the labeling information required in 3 AAC 306.570 will be set out.

Section 6 – Waste Disposal Plan

Review the requirements under 3 AAC 306.520, and identify how the proposed premises will meet the listed requirements.

Describe the marijuana product manufacturing facility's plan for disposal of any expired or outdated marijuana or marijuana product that is not sold or transferred to another licensed marijuana establishment:

Marijuana product waste will be stored away from all other products in a locked container inside the facility and will be rendered unusable prior to leaving the facility for disposal. Management will maintain a log on the status of all marijuana product waste, tracking the type of waste, the date of the disposal, the date it was rendered unusable, and the date it was transported to the waste station and by whom made the transport (any transport will be done by a manufacturing employee with a valid marijuana handler card). All marijuana labeled for disposal will be stored in a secured container, separated from all other products and materials, until it can be rendered usable. The waste will be collected and disposed of once a week or as needed. Prior to destruction of marijuana, AMCO enforcement will be notified three days beforehand via email. The logged information will be available to AMCO at any time upon request, and securely stored.

Section 7 – Testing

The area where in-house testing will occur must be identified on the premises diagram, per 3 AAC 306.520(2).	Yes	No
Will the marijuana product manufacturing facility perform in-house testing (as defined in 3 AAC 306.990(b)(20))?	☐	☑

Applicants should review 3 AAC 306.550 and be able to answer "Agree" to the item below.

The marijuana cultivation facility applicant has:	Agree	Disagree
Read and understands and agrees to the required laboratory testing set forth in 3 AAC 306.550	☑	☐

I declare under penalty of perjury that I have examined this form, including all accompanying schedules and statements, and to the best of my knowledge and belief find it to be true, correct, and complete.
