Alaska Marijuana Control Board

Cover Sheet for Marijuana Establishment Applications

What is this form?

This cover sheet **must** be completed and submitted any time a document, payment, or other marijuana establishment application item is emailed, mailed, or hand-delivered to AMCO's main office.

Items that are submitted without this page will be returned in the manner in which they were received.

Section 1 – Establishment Information

Enter information for the business seeking to be licensed, as identified on the license application.

Licensee:	EMERALD CITY ORGANICS, LLC	**License Number:**	12633		
License Type:	Standard Marijuana Cultivation Facility				
Doing Business As:	EMERALD CITY ORGANICS, LLC				
Physical Address:	4250 Field of Dreams St.				
City:	Wasilla	**State:**	AK	**Zip Code:**	99654
Designated Licensee:	Jay Murray				
Email Address:	emeraldcityak@gmail.com				

Section 2 – Attached Items

List all documents, payments, and other items that are being submitted along with this page.

Attached Items:	Supplemental Cultivation Plan with Corrections and Additional Pages

OFFICE USE ONLY					
Received Date:		Payment Submitted Y/N:		Transaction #:

Alaska Marijuana Control Board

Operating Plan Supplemental
Form MJ-04: Marijuana Cultivation Facility

What is this form?

This operating plan supplemental form is required for all applicants seeking a marijuana cultivation facility license and must accompany the **Marijuana Establishment Operating Plan (Form MJ-01)**, per 3 AAC 306.020(b)(11). Applicants should review **Chapter 306: Article 4** of the **Alaska Administrative Code.** This form will be used to document how an applicant intends to meet the requirements of those regulations. If your business has a formal operating plan, you may include a copy of that operating plan with your application, but all fields of this form must still be completed per 3 AAC 306.020 and 3 AAC 306.420(2).

What additional information is required for cultivation facilities?

Applicants must identify how the proposed establishment will comply with applicable regulations regarding the following:

- Prohibitions
- Cultivation plan
- Odor control
- Testing procedure and protocols
- Security

This form must be submitted to AMCO's main office before any marijuana cultivation facility license application will be considered complete.

Section 1 – Establishment Information

Enter information for the business seeking to be licensed, as identified on the license application.

Licensee:	Emerald City Organics, LLC	**License Number:**	12633		
License Type:	Standard Marijuana Cultivation Facility

Operating Plan Supplemental
Form MJ-04: Marijuana Cultivation Facility

Section 2 – Prohibitions

Applicants should review 3 AAC 306.405 – 3 AAC 306.410 and be able to answer "Agree" to all items below.

The marijuana cultivation facility will not:	Agree	Disagree
Sell, distribute, or transfer any marijuana or marijuana product to a consumer, with or without compensation	☑	☐
Allow any person, including a licensee, employee, or agent, to consume marijuana or marijuana product on its licenses premises or within 20 feet of the exterior of any building or outdoor cultivation facility	☑	☐
Treat or otherwise adulterate marijuna with any organic or nonorganic chemical or compound to alter the color, appearance, weight, or odor of the marijuana	☑	☐

Section 3 – Cultivation Plan

Review the requirements under 3 AAC 306.420, and identify how the proposed premises will meet the listed requirements.

Describe the size of the space(s) the marijuana cultivation facility intends to be under cultivation, including dimensions and overall square footage. Provide your calculations below:

The cultivation facility will be subdivided into three (3) sections: a vegetation/genetic room dedicated to germination, propagation, and cloning as well as vegetative growth for all marijuana plants, four (4) flowering rooms that will hold the late stage/flowering phase of the plant, and finally drying, trimming, curing, and packaging the final harvested product. The marijuana is then placed into a quarantine/storage area while it awaits testing approval then ready for transport to licensed marijuana retailers.

Mother Room/ Cloning/ Vegetative Growth Dry Room/Trim room
284 square feet under cultivation: 12'x23'6" 120 square feet: 10'x12'

Flowering Rooms Quarantine/Storage
Four (4) rooms 234 square feet each: 13'x18' 127 square feet: 12.7'x10'

Alaska Marijuana Control Board

Operating Plan Supplemental

Form MJ-04: Marijuana Cultivation Facility

Describe the marijuana cultivation facility's growing medium(s) to be used:

Emerald City Organics will use a combination of growing mediums in order to provide rapid and healthy growing techniques to ensure consistent product. The two mediums that will be utilized will be hydroponic (soilless) as well as soil. Hydroponic cultivation refers to plant propagation within a soilless environment that deliver nutrients through liquid fertilizers making them available directly to the root systems that are submerged in water. Other plants will be propagated in soil whereas soil refers to earth in combination with other nutrients produce vegetation and crop production. Emerald City Organics utilizes these two mediums for different stages of plant development, soil being the medium for mothers/genetics and hydroponic medium for the flowing/late stage development.
The vegetation room will consist of both soil and hydroponic mediums depending on the type needed for stage of growth and strain of plant. The flowering rooms with rely on hydroponic mediums for all plants entering late stage/flowering growth periods. The Cultivation Specialist with monitor these mediums regularly in order to avoid contamination of pests, molds, mildews and any other issues that can be harmful to the cultivation process.
Once the soil has been utilized for the life of the plant the soil will be disposed of by isolating the remaining soil and consolidated to be transferred to a waste facility or providing it to local businesses. When the late stage/ flowering process is completed the hydroponic water will be reused or consolidated and provided to local businesses.
(Continued on Additional Pages)

Describe the marijuana cultivation facility's fertilizers, chemicals, gases, and delivery systems, including carbon dioxide management, to be used:

Emerald City Organics employees will following proper safety protocols including but not limited to; wearing gloves, protective eye wear, clean clothing, and other items as necessary to handle fertilizers. Fertilizers will be used throughout the growing process from vegetation through the flowering/late stage growth periods. Fertilizers will not be used during the final weeks of the flowering period in order to flush the plant of all remaining fertilizers prior to harvest. All fertilizers will be handled and mixed according to manufacturer's labeling specifications or at the Cultivation Specialists specifications.

Fertilizers to be introduced into soil mediums will be mixed in container before administering by hand directly into the growing medium. Hydroponic fertilizers will be administered by entire reservoir nutrient changes or additional nutrients supplemented to the system in order to maintain desired levels determined by the Cultivation Specialist. Regular feeding schedules will be followed as set by the Cultivation Specialist to maintain consistent grow cycles. Records will be kept of feeding schedules and all nutrients provided to each plant to ensure proper labels are produced with all ingredients requirements as required by 3 AAC 306.475.
(Continued on Additional Pages)

Describe the marijuana cultivation facility's irrigation and waste water systems to be used:

Emerald City Organics will be using irrigation systems specific for the stage of plant development and medium used in each system. Each irrigation system will utilize the needed fertilizers required for the plant growth phase determined by the Cultivation Specialist. Vegetation/Mother/Genetic rooms will administer irrigation techniques that include manual feeding of nutrients and monitored daily by the Cultivation Specialist and cultivation employees. Flower rooms will require nutrient balancing and controlled by daily measurements of nutrient concentrations in order to maintain the desired feeding regiment. The flowering rooms will then be completely flushed of all nutrients and replaced with the following feed schedules fertilizer concentrations as determined by the Cultivation Specialist. All employees involved in monitoring levels and administering fertilizers will adhere to a safety protocol included wearing gloves, safety glasses, and clean clothes when working on irrigation systems.

Describe the marijuana cultivation facility's growing medium(s) to be used:

Growing mediums as outlined in regulations 3 AA 306.420(B) are listed below and will be used as part of the cultivation process:

Hydroponic:
- Natural clay
- Coconut husk natural fiber
- Vermiculite
- Perlite
- Pith
- Rockwool mineral cubes
- Reverse Osmosis (RO) system

Soil:
- Coconut husk natural fiber
- Vermiculite
- Perlite
- Fibrous peat moss
- Pumise
- Fish Bone meal
- Soybean meal
- Alfalfa meal
- Fulvic acid
- Earthworm castings
- Bat guano
- Glacier dust
- Kelp meal
- Ostershells
- Bone meal
- Shrimp meal
- Seabird guano
- Blood meal
- Seaweed extract

Continued Page 3:
Describe the marijuana cultivation facility's fertilizers, chemicals, gases, and delivery systems, including carbon dioxide management, to be used:
All employees that handle fertilizers will have access to Emerald City Organic's safety protocols as well as follow all health and safety requirements as stated in 3 ACC 306. 440 and 3 ACC 306. 735 as applicable to the handling of fertilizers and chemicals. Safety protocols for fertilizers, chemicals, and all other agents required will be kept on record and accessible for all employees during business hours as well as be reviewed during orientation. In the case of a fertilizer or chemical spill any employee will follow the protocols below:
• Inform a manager immediately so they can assess safety or hazard concerns and follow up with necessary entities (e. AOSHA, AMCO, AWWU, etc)
• Utilize and washing or eye washing station to clean the affected area thoroughly.
• Seek emergency medical assistance if necessary.
• Participate in debriefing in order to help the company to review their SOP's for fertilizer and chemical delivery and etc.
Fertilizers:
Current Cultures: Cultured Solutions Nutrient Program
• Ammonium Calcium Nitrate
• Potassium Nitrate
• Copper EDTA
• Iron EDTA
• Manganese EDTA
• Sodium Molybdate
• Sodium Borate
• Zinc EDTA
• Hypochlorous Acid
• Potassium Phosphate
• Magnesium Sulfate
• Ammonium Phosphate
• Potassium Nitrate
• Potassium Sulfate
• Ammonium Nitrate
• Iron DTPA
• Monopotassium Phosphate
Clonex Cloning Hormone Gel
• Indole butyric acid
• 2-Hydroxyethylcelluose

(Additional Space as Needed):

Continued Page 3:
Describe the marijuana cultivation facility's fertilizers, chemicals, gases, and delivery systems, including carbon dioxide management, to be used:

The chemicals used for pests, insect and fungus maintenance will be Neem Oil in flowering rooms that will be thoroughly cleaned after each plant cycle and harvest has been completed. Hydrogen Peroxide will be used in the hydroponic mediums to clean and help prevent fungus development during flowering plant cycles as well as after harvest to sanitize prior to the following flower cycle. Isopropyl alcohol will be used to clean and maintain scissors and trim equipment. Simple Green will be used as a general purpose cleaner.

Gases and Delivery Systems:
CO2:
CO2 will be supplemented into the flower/late stage rooms in order to produce and CO2 rich environment that supports enhanced growth and nutrient uptake. Compressed CO2 that produce CO2 through UL listed CO2 sensors and regulators will be utilized. These canisters will be in specified areas and monitored daily by the Cultivation Specialist and any cultivation employee. Each CO2 canister will produce a regulated amount of CO2 and will be recorded. The use of CO2 bags may be added if the primary CO2 canisters become broken or additional amounts are needed.

Each room will contain a CO2 monitoring devise that indicate when the levels of CO2 have reached an dangerous level in order to provide a warning to employees. If an employee experiences a leak or an indication of unsafe CO2 levels they will follow the protocols below:
• Immediately shut off CO2 canister
• Immediately contact a manager who is trained in located CO2 leaks and responding to CO2 emergencies.
• Manager will contact CO2 supplier if needed for additional support
• All employees will follow the evacuation plan out of the facility if concentration is not confined to a single room.

(Additional Space as Needed):

Continued Page 3:Describe the marijuana cultivation facility's irrigation and waste water systems to be used:
Manual Feeding:
Potted plants with soil medium will be hand fertilized based upon the schedule determined by the Cultivation Specialist. All fertilizers will be mixed in large containers and directly applied to each pot using a technique known as flood/drain tables. Each pot will be contained in large tubs that will be filled with fertilizer/water solutions and allow each plant to absorb its individual requirements. These tables will be monitored daily and solution will be added when applicable by the Cultivation Specialist and all cultivation employees.

Excess fertilizer solutions will be stored up to three (3) days until it is reused or disposed of into the wastewater reservoirs. Storage will abide by all wastewater specifications and regulatory requirements.

Hydroponic-Deep Water Culture:
Deep Water Culture Hydroponics maintains desired nutrient concentration by circulating solution through the entire system 24 hours a day. The system connects all pots together and is fed by the main reservoir tank that monitors solution levels provided to each plant. This closed loop systems allows for nutrient solution to be circulated continuously in order to provide the plant with adequate fertilizer and oxygen delivery to root systems. Each unit will be checked daily for solution concentration and system capacity to avoid leakage, clogs, and efficiency of system flow. If solution concentration is outside the desired range or unit capacity is below optimal operating parameters the Cultivation Specialist will take the needed steps to establish equilibrium. Nutrient solution will be replaced every two (2) weeks and replaced with the following weeks nutrient schedule as determined by the Cultivation Specialist.

Emerald City Organics will store, manage and dispose of liquid, solid and wastewater as well as other waste determined by the Marijuana Control Board in compliance with federal, state and local laws and regulations as outlined in 3 AAC 306.740(a). We will provide adequate training and have employees adhere to a detailed disposal process with the use of personal protective equipment and reasonable precautions will be taken while storing, managing and disposing of the waste listed above in accordance with 3 AAC 306.740.

Water Waste:
Wastewater from the hydroponic systems will be emptied into storage tanks. A licensed wastewater disposal company will regularly pump the wastewater out of the storage tanks in compliance with 3 AAC 306.740(a).

Alaska Marijuana Control Board

Operating Plan Supplemental

Form MJ-04: Marijuana Cultivation Facility

Describe the marijuana cultivation facility's waste disposal arrangements:

Emerald City Organics will store, manage and dispose of solid and liquid waste, including wastewater and other waste determined by the Marijuana Board in compliance with applicable federal, state, and local laws and regulations as describe in 3 AAC 306.740(a). Emerald City Organics will ensure the safety and health requirements are followed as well as the use of protective safety equipment and adequate operating precautions followed during disposal of all waste materials as described in 3 AAC 306. 740. Waste is defined as marijuana plant waste, including roots, stalks, leaves and stems that have not be treated with solvent, solid marijuana sample plant waste in possession of marijuana testing facilities and other waste determined by the Marijuana Control Board.

All employees will adhere to standard operating procedures trained for the handling and disposal of waste materials as well as wear protective safety equipment like gloves, eyeglasses, clean clothes and any additional safety requirements. Employees are required to follow health and safety standards as outlined in 3 ACC 306.735 including maintaining clean work environment, maintaining personal hygiene, avoiding contaminated areas, and ensuring waste disposal equipment is adequately maintained. (Continued on Additional Pages)

Section 4 – Odor Control

Review the requirements under 3 AAC 306.430, and identify how the proposed premises will meet the listed requirement.

Describe the odor control method(s) to be used and how the marijuana cultivation facility will ensure that any marijuana at the facility does not emit an odor that is detectable by the public from outside the facility:

Emerald City Organics will utilize an odor control system to neutralize any aromas produced inside the cultivation facility detectable to the public as required by 3 ACC 306.420(a)(2)(F). And 3 ACC 306.430(c)(2). Odor control systems will consist of air filtration systems attached to ventilation throughout the facility as well as seal containers both inside the facility and during transportation of marijuana product to/from the facility. Odor proof packaging will be used for added odor control when marijuana products are being transported off of the facility.

Odor control systems will be checked regularly in order to maintain that the filters/containers/canisters are functioning properly and will be replace if necessary. A record will be kept on the maintenance of these filters and will be replaced by management or by certified maintenance technician if required. The Cultivation Specialist will determine the odor maintenance is checked and replaced per policy and conclude the odor control systems are adequate for the facilities needs. Odor control systems are listed below.

Continued Page 4:
Describe the marijuana cultivation facility's waste disposal arrangements:

Plant Waste:
The cultivation facility will require plant waste containers within the vegetation/genetic, flowering, and dry/trim rooms in order to maintain clean work environments on a daily basis. Each container will be clearly labeled "Plant Waste".

During the transfer to larger bins the plant waste will be weighed using an industrial scale as outlined below and in compliance with 3 ACC 306.745 and logged into the electronic inventory tracking system which will provide the required three (3) days notice to the Marijuana Board in preparation to render it unusable and disposing of it (3 ACC 306.745(b)(1)).

After the required three (3) days waiting period the Board has for approval of disposal, waste material will be added to compostable or non-compostable material. Marijuana plant waste will be weighed on the industrial scale, ground down using a commercial grinder and mixed with an equal amount of compostable or non-compostable material listed below.

Compostable:
-Food waste
-Vegetable waste
-Yard waste
Unusable solid waste will be collected by a waste management facility and disposed of in an incinerator or any other means to dispose of properly. A record will be kept for business requirements outlined in 3 ACC 306.470(c)(2). Testing samples will be disposed of in the same fashion when they are return to the facility after testing in accordance to plant waste disposal.

In a case that the plant waste material has been flagged for emergency disposal from pest, mold/mildew, accidents or any similar situation the solid waste will be quarantined from any other solid plant waste or material. The Marijuana Board will be contacted immediately and remains quarantined until the Board approves disposal as defined in 3 ACC 306.740(c)(1). Procedures on waste disposal will follow the emergency disposal situation and sanitary precautions will be taken if applicable.

Emerald City Organic's will give at least three (3) days notice to the Board before disposal of any solid waste material by logging the affected products in the inventory tracking system, METRC.

Describe the odor control method(s) to be used and how the marijuana cultivation facility will ensure that any marijuana at the facility does not emit an odor that is detectable by the public from outside the facility:

HVAC and Carbon Odor Scrubbers:

Employee Odor Control Policy and Procedures:

All employees will be trained on odor control and the importance of these techniques to help determine odor system failures and odor transmittance from the facility to the outside public. Employees will follow the protocols described below:

• Notify management if odor systems fail.
• Marijuana packaged and transported in odor-controlled bags/containers and sealed before leaving the facilities premises.
• Waste containers remain seal when not in use.
• Monthly checks on all odor control systems to acknowledge the state of the system and when replacement and repairs are required.
• Monthly check of outer perimeter of facility to monitor the odor systems ability to neutralize odor from detection to the outside public.

Employees will also be responsible for odor control on their person by changing into clean work clothes at the facility. These clothes will be stored on the premise and will be changed into at the beginning of each workday and out of at the end of each workday. All work clothes will be secured inside odor proof bags to be transported and washed off of the premise and returned for further use on a regular basis to minimize on odor impact off of the premise as required by 3 ACC 306.435.

Section 5 – Testing Procedure and Protocols

Review the requirements under 3 AAC 306.455 and 3 AAC 306.465, and identify how the proposed premises will meet the listed requirements.

Applicants should be able to answer "Agree" to the item below.

I understand and agree that:	Agree	Disagree
The board will or the director shall from time to time require the marijuana cultivation facility to provide samples of the growing medium, soil amendments, fertilizers, crop production aids, pesticides, or water for random compliance checks	☑	☐

Describe the testing procedure and protocols the marijuana cultivation facility will follow:

Emerald City Organics will follow the testing procedure and protocols required by the outlined regulations 3 ACC 306.455 and 3 ACC 306.456.

The Cultivation Specialist will be the designated employee unless otherwise specified to gather the sample required for testing procedures as defined by 3 ACC 306.455(a)(2). This employee will trained on obtaining, weighing, and packaging the samples prior sale to transport to the authorized testing facility as well as acquire random sample by the request of the Marijuana Control Board Director and/or staff outline in 3 ACC 306.456.

The authorized employee will obtain a sample and weigh each sample to determine if the sample is less that the maximum gram amount required. All weighing equipment used in the Cultivation Facility will be certified in compliance with AS 45.75.080 the Alaska Weights and Measures Act. The QCU will be responsible for maintaining the weighing devises.

The authorized employee will conduct the weighing procedure and prepare a signed statement for each individual sample to show that each sample was randomly obtained from each batch and then provide this statement to the licensed testing facility as well as a copy to be added to the official business record.

Testing will occur in a licensed testing facility as outlined in 3 ACC 306.475(e)(1-4):
- Cannabinoid Profile
- Microbial Testing
- Residual Solvent Testing
- Contaminates such as; molds, mildew, filth, insecticides, pesticides, fungicides, and any other harmful chemicals.

Testing requirements are determined by the licensed testing facility and require seven (7) grams per five (5) pound batches unless otherwise noted by the licensed testing facility specifies or requires for random sampling. Samples will be obtained from individual strain flowers and then randomly selected from each batch. Each sample will be tracked using their own category within the inventory tracking system as being in testing status until testing results and/or sample are returned to the facility. Each sample will be placed into airtight secured bags prior to transport to the licensed testing facility. (Continued on Additional Pages)

Form MJ-04: Marijuana Cultivation Facility

(Additional Space as Needed):

Continued Page 5:
Describe the testing procedure and protocols the marijuana cultivation facility will follow:

All marijuana products will be delivered in a secured container by a third party, secured transport or authorized Emerald City Organics employee that will meet all regulations described in 3 ACC 306.750 including:

- Preparing, packaging, and securing product for transportation
- Recording of transportation of marijuana in the inventory tracking system
- Preparing the transport manifest
- Record the type, amount and weight being transported, the name of transporter, departure/expected arrival times, make and model as well as license plat number of the transporting vehicle. Keep all record pertaining to product transported and received.

Before transporting a testing sample the Cultivation facility will record the following:

- The names and license numbers of the Cultivation Facility and the testing facility
- The type, weight, amount of the marijuana or marijuana product being transported.
- The name and permit number of the transport agent
- The time of expected departure and delivery
- The anticipated route of transportation,
- The make, model, and license plate number of transporting vehicle.

A completed transportation manifest will accompany the marijuana and marijuana product during the entire duration of transport and given to the testing facility once the product is delivered. Emerald City Organics will also keep a copy of the transport manifest for record keeping and as required by the Regulations Post-Results procedures:

Testing Lab Procedures:
Marijuana will be tested for: cannabinoid content (THC, THCV, CBD, CBDN, CBG, etc.), terpinoids, microbial contaminants, mycotoxins, heavy metals and pesticide chemical residue, residual solvent levels, and an active ingredient analysis. This test will conclude if any pests, molds, fungus or any other harsh contaminates were found on the samples. The testing facility will report the results of the finding directly into the METRC system within twenty-four (24) hours after the test has been completed. The testing facility will provide the Cultivation facility with a final report as well as the Marijuana Board Director within seventy-two (72) hours when the results of the testing samples exceed allowable levels.

Describe the testing procedure and protocols the marijuana cultivation facility will follow:

Testing Results Acceptable for Sale:
If the marijuana samples are within acceptable levels for sale, the testing facility will contact the Cultivation Facility in a written statement that the samples indicate that the marijuana product is approved for sale. Then an authorized employee will ensure that the testing results are recorded within the METRC system, and then the corresponding quarantined marijuana can be moved into storage and ready for transport to sale.

Testing Results Not Acceptable for Sale

If the testing facility find a sample that does not fall within acceptable levels for microbial, mycotoxins, heavy metals, pesticide chemical residue, or residual solvent levels the Cultivation Facility will dispose of the entire batch corresponding to the failed sample result and record the disposal in the METRC system. All disposal will adhere to the disposal policy describe previously. The Cultivation facility will ensure that for each failing sample test, an electronic copy of the testing results is forwarded to the Marijuana Board.

The METRC system will allow the Cultivation Facility to remove any product from its inventory. Should the Cultivation Facility receive notice from a licensed facility that any of its products should be removed from its inventory, the QCU will locate all indicated marijuana and marijuana products, immediately removing and placing into quarantine in order for the product to be disposed of in accordance with the Disposal Policy.

Disclosure of Testing Results:
Any testing that is legally required in labeling of marijuana products will be included on all labels on marijuana products sold by the Cultivation Facility. As well as the test results and name of testing the licensed testing facility will be available upon request.

Alaska Marijuana Control Board

Operating Plan Supplemental

Form MJ-04: Marijuana Cultivation Facility

Describe the method(s) used to ensure that any marijuana at the marijuana cultivation facility cannot be observed by the public from outside the facility:

Emerald City Organics plans to operate within the confines of the facility. Any rooms containing product that also have windows will have black-out blinds that prevent any persons from viewing the inside of the facility.

I certify that as a marijuana cultivation facility, I will submit monthly reports to the Department of Revenue and pay the excise tax required under AS 43.61.010 and 43.61.020 on all marijuana sold or provided as a sample to a marijuana establishment, as required under 3 AAC 306.480.

I declare under penalty of perjury that I have examined this form, including all accompanying schedules and statements, and to the best of my knowledge and belief find it to be true, correct, and complete.
