Alaska Marijuana Control Board

Operating Plan Supplemental

Form MJ-05: Marijuana Product Manufacturing Facility

What is this form?

This operating plan supplemental form is required for all applicants seeking a marijuana product manufacturing facility license and must accompany **Form MJ-01: Marijuana Establishment Operating Plan**, per 3 AAC 306.020(b)(11). Applicants should review **Chapter 306: Article 5** of the **Alaska Administrative Code.** This form will be used to document how an applicant intends to meet the requirements of the statutes and regulations.

If your business has a formal operating plan, you may include a copy of that operating plan with your application, but all fields of this form must still be completed per 3 AAC 306.020 and 3 AAC 306.520(3).

What additional information is required for cultivation facilities?

Applicants must identify how the proposed establishment will comply with applicable regulations regarding the following:

- Equipment, compounds, and processes to be used
- Waste disposal
- Testing procedure and protocols
- Proposed marijuana concentrates and marijuana products
- Proposed product packaging and sample labels
- Prohibitions

This form must be completed and submitted to AMCO's main office before any new or transfer application for a marijuana product manufacturing facility or marijuana concentrate manufacturing facility license will be considered complete.

Section 1 – Establishment Information

Enter information for the business seeking to be licensed, as identified on the license application.

Licensee:	RCFC, LLC	**MJ License #:**		12511	
License Type:	Marijuana Product Manufacturing Facility				
Doing Business As:	Rosie Creek Farm				
Premises Address:	2659 Livingston Loop				
City:	Fairbanks	**State:**	Alaska	**ZIP:**	99709

AMCO Received 12/11/2018

Section 2 – Overview of Operations

2.1. Provide an overview of your proposed facility's operations. Include information regarding the intake, flow, and transfer of marijuana, marijuana concentrate, and marijuana product at and from your premises:

All shipments of marijuana and marijuana product that arrives at the facility will be first inspected by a member of the Rosie Creek Farm management team or by a licensee before being accepted and entered as inventory. The shipment contents will be reconciled with the transport manifest, shipment labels and packaging labels to ensure consistency. All product will be weighed by Rosie Creek Farm and reconciled with the weight listed on the manifest and labels. Any shipments with discrepancies will be rejected. Shipments that pass initial inspection will be accepted into the facility, immediately entered into METRC and added to the inventory log. All marijuana and marijuana products will be tracked in METRC from intake into the facility, to it's use in a manufactured product or disposal to it's transfer to another licensed facility. At the end of each business day, Rosie Creek Farm's management team will reconcile each transfer to or from another licensed facility with METRC and the inventory on hand to ensure consistency and to resolve discrepancies immediately.
A random sample of each product manufactured at the facility will be sent to a licensed testing lab before being transferred to another licensed facility and the remainder of the production lot will be segregated from all other product until the testing results are received. Once passing testing results are received from the testing lab, marijuana products will be packaged and labeled in compliance with 3 AAC 306.565 and 306.570. The packaged products will then be transported by an agent of Rosie Creek Farm who holds a valid marijuana handler permit or by a third party transport company with valid marijuana handler permits. All transfers will be entered into METRC and a trip manifest will be sent with each shipment as well as stored on site as a business record.

Section 3 – Equipment and Compounds to be Used

Review the requirements under 3 AAC 306.555.

3.1. Describe the equipment and solvents, gases, chemicals, and other compounds the marijuana product manufacturing facility will use to create marijuana concentrates:

Equipment used to create concentrates:

- stainless steel or nylon mesh screens
- hydraulic press
- ice machine
- chest freezers
- electric freeze dryer
- electric pot still
- stainless steel grater
- crockpot
- oven

Solvents used to create concentrates:
- ice water
- water
- ethanol

All Products: All marijuana concentrates will be produced using primarily mechanical means, the exception being the use of water as a solvent for producing ice water hash. Purity of product and the safety of the consumer and manufacturer will be paramount to our operation.

AMCO Received 12/11/2018

Section 4 – Waste Disposal

Review the requirements under 3 AAC 306.740.

You must be able to certify the statement below. Read the following and then sign your initials in the box to the right: Initials

4.1. The marijuana product manufacturing facility shall give the board at least three days written notice required under 3 AAC 306.740(c) before making marijuana waste unusable and disposing of it.

4.2. Describe how you will store, manage, and dispose of any solid or liquid marijuana waste, including expired or outdated marijuana or marijuana product, in compliance with any applicable laws. Include details about the material(s) you will mix with ground marijuana waste and the processes that you will use to make the marijuana waste unusable for any purpose for which it was grown or produced:

Rosie Creek Farm anticipates the following marijuana plant and product waste at the manufacturing facility; (1) contaminated or infected marijuana or marijuana products (2) marijuana or marijuana products deemed by the licensee or a manager as unfit for sale or consumption for any reason (3) marijuana product that fails testing (4) marijuana plant waste created during the extraction process (5) marijuana or marijuana product that becomes expired (6) other marijuana or marijuana product waste as determined by the MCB or director. Once marijuana or marijuana product is deemed as waste, it will be separated from all other marijuana and marijuana products and securely stored in locked bins on the licensed premises and an email notification will be sent to AMCO Enforcement at least 3 days prior to rendering the waste unusable as well as recording the waste in METRC. All solid marijuana plant waste (plant matter waste from the extraction process such as plant matter that is pressed/squeezed to extract oil) and marijuana product waste will be ground in a grinder and then mixed with other solid compostable or noncompostable waste until the mixture is no more than 50% marijuana waste. Liquid marijuana waste such as concentrates, will be mixed with at least equal parts of non-marijuana waste and then stored away from all other marijuana and marijuana products in locked containers on the premises. The waste will be collected and composted (if compostable) once a week or as needed and what cannot be composted will be picked up by the borough waste facility truck and delivered to the waste station. A log will be maintained recording the final destination of all marijuana and marijuana product waste. The logged information will be available to AMCO at any time upon request, and securely stored.

AMCO Received 12/11/2018

Section 5 – Testing Procedure and Protocols

Review the requirements under 3 AAC 306.520 and 3 AAC 306.550.

You must be able to certify the statement below. Read the following and then sign your initials in the box to the right:	Initials
5.1. I will ensure that any individual responsible for collecting random samples for required laboratory testing under 3 AAC 306.455 will prepare the necessary accompanying signed statement, provide the signed statement to the marijuana testing facility, and maintain a copy as a business record under 3 AAC 306.755.	MS

Answer "Yes" or "No" to the following question:	Yes	No
5.2. Will the marijuana product manufacturing facility be performing in-house testing (as defined under 3 AAC 306.990(b)(20)?	☐	☑

If "Yes" to 6.2, you must be able to certify the statement below. Read the following and then sign your initials in the box:	Initials
5.3. The area where in-house testing will occur is clearly identified on the Form MJ-02: Premises Diagram that is submitted with this application.	MS

5.4. Describe the testing procedures and protocols the marijuana product manufacturing facility will follow:

A designated Rosie Creek Farm employee will be responsible for collecting a random sample from each production lot to be sent to a licensed testing facility. The designated employee will sign a statement certifying that the sample was randomly selected. A copy of the signed statement will accompany the sample to the testing facility and another copy will be filed on-site as a business record. The sample will be transported to the testing facility by a Rosie Creek Farm agent who holds a valid marijuana handler permit or by a third party transport company who has valid marijuana handler permits. The remainder of the production lot will be segregated from all other marijuana and marijuana products in secure containers until the testing results are received. During the quarantine period, all product will be securely stored on-site and the Mike and the general manager will ensure the products are kept cool and dry to prevent contamination or loss of efficacy.
A copy of the testing facility results will be stored in the office on-site as an official business record and will be made available to AMCO upon request.

Section 6 – Proposed Marijuana Concentrates and Marijuana Products

Review the requirements under 3 AAC 306.520, 3 AAC 306.525, and 3 AAC 306.560.
Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.

Product Name:	Dry Sift Hash		
Product Type:	Marijuana Concentrate		
Perishable: Yes/No	Yes	**Shelf Life:** If perishable.	8 months

Product Description: Details must include the color, shape, and texture.	In its powdery form, dry sift hash will appear as a green-gold to gold-brown dust. When pressed and aged, the hash will appear a rich chocolate brown on the outside and lighter brown, yellow brown, or greenish brown inside. Variations in color, shape and texture will occur based on season, variety, age and grade.
Ingredients: This box is not applicable to marijuana concentrates.	N/A
Standard Production Procedure and Detailed Manufacturing Process:	The production of dry sift hash is based on agitating dry plant material above or within fine mesh screens to separate and collect the trichomes of the plant. Initially, dried cannabis will be crumbled by hand. The crumbled cannabis will then be placed it into a nylon mesh cylinder suspended in a food grade plastic container which will be rotated with a small electric motor. The resulting hash will then be collected for use or further refinement by placing hash on top of flat nylon screens of increasingly smaller mesh sizes and manually moving the hash back and forth across the top of the screen. With each pass across the screens more plant material will be removed and the hash will become purer. Trichomes will then be hand collected and either stored in a loose, powdery state or pressed into cakes by hand or with a hydraulic press.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.	

AMCO Received 12/11/2018

Section 7 – Proposed Product Packaging and Sample Labels

Review the requirements under 3 AAC 306.520, 3 AAC 306.565, and 3 AAC 306.570.
Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.

Product Name:	Dry Sift Hash
Product Type:	Marijuana Concentrate

Packaging Description:
Details must include the color(s), size, packaging materials used, total amount of THC, individual serving sizes (if multiple), and other specifics showing compliance with 3 AAC 306.565. Please include photos, drawings, or graphic representations.

0.5g 1g, 3.5g and 7 gram portions will be packaged in either a combinatio of clear, self-sealing adhesive strip cellophane sleeves, parchment paper, and cardboard or small silicone or glass containers and then into resealable, opaque and child-resistant mylar bags for retail sales. Up to 5 pounds of hash may be packaged in glass jars with screw top lids for wholesale to other licensed product manufacturers. Depending on grade, hash will range between 20% and 90% THC by weight. The actual THC content will be listed on the label per the testing results.

Sample Labels:
Provide sample labels showing how the labeling requirements set forth in 3 AAC 306.570 will be met.

Produced by: Rosie Creek Farm

Product Name:	Ice Water Hash		
Product Type:	Marijuana Concentrate- intended for inhalation		
Perishable: Yes/No	Yes	**Shelf Life:** If perishable.	8 months

Product Description: Details must include the color, shape, and texture.	Ice water hash will appear pale-golden to reddish-brown to greenish-grey. Texture will vary from a soft fine powder, to solid yet pliable chunks. Most hash will be fully opaque, however, the highest-grade hash may at times suggest a degree of translucence. Ice water hash will be sold in a powdered form, pressed into "cakes," or left in the "clumpy" state it appears in when first dried. Variations in color, shape and texture will occur based on season, variety, age and grade.
Ingredients: This box is not applicable to marijuana concentrates.	N/A
Standard Production Procedure and Detailed Manufacturing Process:	Dried or frozen cannabis will be submerged in barrels filled with ice and water and lined with synthetic mesh bags. After a period of manual agitation, left-over cannabis will be removed and wasted according to the facility waste plan. The mesh bags will then be removed individually from the solution, filtering the hash from the water. Hash will then be collected from the bags and dried in an electric freeze dryer. Once dry, hash will be left as-is, manually powdered using a stainless-steel grater, or pressed into "cakes" either by hand or with a hydraulic press.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Product Name:	Rosin		
Product Type:	Marijuana Concentrate (Dab oil) - intended for inhalation		
Perishable: Yes/No	Yes	**Shelf Life:** If perishable.	8 months

Product Description: Details must include the color, shape, and texture.	Rosin will be honey colored and semi-transparent. The texture is either smooth to the touch or slightly sticky. Rosin consistency will vary somewhat depending on the batch but generally resembles mostly, but not fully, dried spruce sap. Rosin will appear in flat, uneven globs.
Ingredients: This box is not applicable to marijuana concentrates.	N/A
Standard Production Procedure and Detailed Manufacturing Process:	Rosin will be produced via heat and pressure using a hydraulic press with heated metal pressing plates. Dried or frozen cannabis plant material or hash will be placed into synthetic, heat resistant, fabric mesh bags. The bags will then be placed between a folded sheet of parchment paper and then onto the press. The combination of heat and pressure will move cannabis oils (rosin) out of the nylon bags and onto the parchment paper where it will be collected. Rosin may be manually pressed flat after collection.

Section 6 – Proposed Marijuana Concentrates and Marijuana Products

Review the requirements under 3 AAC 306.520, 3 AAC 306.525, and 3 AAC 306.560.
Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.

Product Name:	Cannabis Essential Oil		
Product Type:	Marijuana Concentrate		
Perishable: Yes/No	Yes	**Shelf Life:** If perishable.	12 months

Product Description: Details must include the color, shape, and texture.	Cannabis Essential Oils appear as a mostly clear liquid. Coloration can be a slight gold or greenish tint to the liquid.
Ingredients: This box is not applicable to marijuana concentrates.	N/A
Standard Production Procedure and Detailed Manufacturing Process:	Fresh or dried plant material is placed into a stainless-steel or copper chamber above another chamber containing water. As the water is heated to boiling using an electric heating apparatus, steam passes up through the plant material and acts as a solvent for the plant's volatile oils. The steam then exits the chamber into a length of metal pipe where it cools, condenses and is collected. Essential oils then separate from the water before they are removed and stored in glass containers.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.	

AMCO Received 12/11/2018

Section 7 – Proposed Product Packaging and Sample Labels

Review the requirements under 3 AAC 306.520, 3 AAC 306.565, and 3 AAC 306.570.
Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.

Product Name:	Cannabis Essential Oil
Product Type:	Marijuana Concentrate

Packaging Description: Details must include the color(s), size, packaging materials used, total amount of THC, individual serving sizes (if multiple), and other specifics showing compliance with 3 AAC 306.565. Please include photos, drawings, or graphic representations.	Cannabis essential oils will be packaged in clear or opaque glass vials in 0.5 ml to 5 ml quantities for retail sales and in large glass containers up to 1 pound for wholesale. Cannabis essential oils will contain only trace amounts of THC - generally less than 1% and will be printed on labels per the testing results. *To be placed into fully opaque and child-resistant exit packaging in compliance with 3 AAC 306.345(a)(3) by the retailer.

Sample Labels:
Provide sample labels showing how the labeling requirements set forth in 3 AAC 306.570 will be met.

Product Name:	Cannabis Hydrosol		
Product Type:	Marijuana Concentrate		
Perishable: Yes/No	Yes	**Shelf Life:** If perishable.	12 months

Product Description: Details must include the color, shape, and texture.	Cannabis hydrosol appears as water (clear liquid, sometimes with a golden to yellow tint), of which it is primarily composed, and is quite aromatic.
Ingredients: This box is not applicable to marijuana concentrates.	N/A
Standard Production Procedure and Detailed Manufacturing Process:	Fresh or dried plant material is placed into a stainless-steel or copper chamber above another chamber containing water. As the water is heated to boiling using an electric heating apparatus, steam passes up through the plant material and acts as a solvent for the plant's volatile oils. The steam then exits the chamber into a length of metal pipe where it cools, condenses and is collected. Essential oils separate from the water and are removed. The remaining water, now infused with aromatics, is collected and stored in glass containers.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Section 6 – Proposed Marijuana Concentrates and Marijuana Products

Review the requirements under 3 AAC 306.520, 3 AAC 306.525, and 3 AAC 306.560.
Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.

Product Name:	Rosin Tincture (Decarboxylated)		
Product Type:	Marijuana Product - intended for ingestion		
Perishable: Yes/No	Yes	**Shelf Life:** If perishable.	12 months

Product Description: Details must include the color, shape, and texture.	Rosin tincture will appear yellowish to amber. It will be aromatic and fully liquid.
Ingredients: This box is not applicable to marijuana concentrates.	Rosin tincture will include food-grade ethanol infused with cannabis rosin.
Standard Production Procedure and Detailed Manufacturing Process:	First, rosin will be decarboxylated by heating to around 220 degrees F for 30-60 minutes in a scientific grade oven to covert THCA to THC. Next, rosin will be infused in food-grade ethanol for a period of time in a glass, ceramic or stainless-steel container. Rosin will then be strained from the ethanol, yielding infused ethanol, or tincture.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Section 7 – Proposed Product Packaging and Sample Labels

Review the requirements under 3 AAC 306.520, 3 AAC 306.565, and 3 AAC 306.570.
Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.

Product Name:	Rosin Tincture (Decarboxylated)
Product Type:	Marijuana Product - intended for ingestion

Packaging Description: Details must include the color(s), size, packaging materials used, total amount of THC, individual serving sizes (if multiple), and other specifics showing compliance with 3 AAC 306.565. Please include photos, drawings, or graphic representations.	Rosin Tincture will be packaged in 15ml opaque, glass dropper bottles. Serving size will be clearly indicated on the bottle for consumers. Approximately 1.5 dropper fulls (1.5ml or approximately 45 drops) will equal one serving and 5mg THC. Each bottle will contain approximately10 servings not to exceed 50mg THC per bottle. *Bottles to be placed into fully opaque and child-resistant exit packaging in compliance with 3 AAC 306.345(a)(3) by the retailer*

Sample Labels:
Provide sample labels showing how the labeling requirements set forth in 3 AAC 306.570 will be met.

Product Name:	Cannabis Valerian Tincture		
Product Type:	Marijuana Product - intended for ingestion		
Perishable: Yes/No	Yes	**Shelf Life:** If perishable.	12 months

Product Description: Details must include the color, shape, and texture.	Cannabis tincture will appear yellowish to dark green in color. It will be aromatic and fully liquid.
Ingredients: This box is not applicable to marijuana concentrates.	Cannabis tincture will include food-grade ethanol infused with cannabis leaf and flower and valerian root.
Standard Production Procedure and Detailed Manufacturing Process:	Cannabis flower and leaf and valerian root will be infused seperately in food-grade ethanol for a period of time in a glass, ceramic or stainless-steel container. Cannabis and valerian will then be strained from the ethanol, yielding infused ethanol, or tincture. The two tinctures will then be combined together.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Section 6 – Proposed Marijuana Concentrates and Marijuana Products

Review the requirements under 3 AAC 306.520, 3 AAC 306.525, and 3 AAC 306.560.
Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.

Product Name:	Cannabis Healing Salve (Decarboxylated)		
Product Type:	Marijuana Product - intended for topical application		
Perishable: Yes/No	Yes	**Shelf Life:** If perishable.	12 months

Product Description: Details must include the color, shape, and texture.	Cannabis healing salve will appear yellowish to dark green in color and be aromatic. It will be smooth and oily to the touch and vary between hard and soft depending on the temperature at which it is stored. Salve is intended for topical use and not for ingestion.
Ingredients: This box is not applicable to marijuana concentrates.	Cannabis healing salve will contain decarboxylated cannabis infused vegetable oils, beeswax, honey, spruce sap, and other vegetable oils infused with comfrey, calendula, arnica, and poplar buds.
Standard Production Procedure and Detailed Manufacturing Process:	Infused vegetable oils will be slightly heated in a slow cooker and mixed with beeswax, sap, and honey before being poured into tins and allowed to cool.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Section 7 – Proposed Product Packaging and Sample Labels

Review the requirements under 3 AAC 306.520, 3 AAC 306.565, and 3 AAC 306.570.
Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.

Product Name:	Cannabis Mullein Artemisia Hash Pre-rolls
Product Type:	Marijuana Product - intended for inhalation

Packaging Description: Details must include the color(s), size, packaging materials used, total amount of THC, individual serving sizes (if multiple), and other specifics showing compliance with 3 AAC 306.565. Please include photos, drawings, or graphic representations.	The pre-rolls will be approximately 2 1⁄2 to 5 inches long and contain approximately 10-40% THC by weight. The actual THC content will be listed on the label per the testing results. Pre-rolls will be sold loose to retailers or packaged in either cardboard, plastic tubes, or metal tins and then into opaque, child-resistant and resealable mylar bags. Paper liners and cellophane wrapping may also be used in packaging. Pre-rolls will be packaged either singly or in groups.

Sample Labels:
Provide sample labels showing how the labeling requirements set forth in 3 AAC 306.570 will be met.

Section 6 – Proposed Marijuana Concentrates and Marijuana Products

Review the requirements under 3 AAC 306.520, 3 AAC 306.525, and 3 AAC 306.560.
Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.

Product Name:	Cannabis Mullein Hash Pre-rolls		
Product Type:	Marijuana Product - intended for inhalation		
Perishable: Yes/No	No	**Shelf Life:** If perishable.	N/A

Product Description: Details must include the color, shape, and texture.	Pre-rolls will be cone shaped and off-white in color. Smooth hemp paper will be used for the cones.
Ingredients: This box is not applicable to marijuana concentrates.	Pre-rolls will contain ground cannabis flowers and leaves, dry sift hash and ground mullein leaves.
Standard Production Procedure and Detailed Manufacturing Process:	Measured quantities of cannabis, hash and mullein will be used to mechanically fill pre-rolled hemp paper cones in a cone filling machine. The machine will use vibration to fill the cones with the mixture. Cones will then be removed from the machine, their ends manually twisted shut and packaged.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Section 8 – Prohibitions

Review the requirements under 3 AAC 306.510.

8.1. I certify that the marijuana product manufacturing facility will not: Initials

a. **sell, deliver, distribute, or transfer any marijuana, marijuana concentrate, or marijuana product directly to a consumer, with or without compensation;** [ME]

b. **allow any person, including a licensee, employee, or agent, to consume marijuana, marijuana concentrate, or marijuana product on the licensed premises; or** [MS]

c. **manufacture or sell any product that is an adulterated food or drink, closely resembles a familiar food or drink item including candy, or is packaged to look like candy, or in bright colors or with cartoon characters or other pictures or images that would appeal to children.** [MS]

I declare under penalty of unsworn falsification that this form, including all accompanying schedules and statements, is true, correct, and complete.
