Alaska Marijuana Control Board

Operating Plan Supplemental

Form MJ-05: Marijuana Product Manufacturing Facility

What is this form?

This operating plan supplemental form is required for all applicants seeking a marijuana product manufacturing facility license and must accompany **Form MJ-01: Marijuana Establishment Operating Plan**, per 3 AAC 306.020(b)(11). Applicants should review **Chapter 306: Article 5** of the **Alaska Administrative Code.** This form will be used to document how an applicant intends to meet the requirements of the statutes and regulations.

If your business has a formal operating plan, you may include a copy of that operating plan with your application, but all fields of this form must still be completed per 3 AAC 306.020 and 3 AAC 306.520(3).

What additional information is required for cultivation facilities?

Applicants must identify how the proposed establishment will comply with applicable regulations regarding the following:

- Equipment, compounds, and processes to be used
- Waste disposal
- Testing procedure and protocols
- Proposed marijuana concentrates and marijuana products
- Proposed product packaging and sample labels
- Prohibitions

This form must be completed and submitted to AMCO's main office before any new or transfer application for a marijuana product manufacturing facility or marijuana concentrate manufacturing facility license will be considered complete.

Section 1 – Establishment Information

Enter information for the business seeking to be licensed, as identified on the license application.

Licensee:	E & M Holdings, LLC	**MJ License #:**	16991		
License Type:	Marijuana Product Manufacturing Facility				
Doing Business As:	Stoney Moose Kitchens				
Premises Address:	9737 Mud Bay Rd., Suite 104				
City:	Ketchikan	**State:**	Alaska	**ZIP:**	99901

Received by AMCO 1.28.19

Section 2 – Overview of Operations

2.1. Provide an overview of your proposed facility's operations. Include information regarding the intake, flow, and transfer of marijuana, marijuana concentrate, and marijuana product at and from your premises:

Stoney Moose Kitchens (SMK) will receive cannabis (flower, trim, extract) from registered and compliant marijuana cultivators and manufacturers within the state of Alaska. Product shall be received at the premises, 9737 Mud Bay Rd suite 104, and will be immediately weighed and inventoried/logged into METRC (marijuana inventory tracking system). Any received cannabis product will be stored until use in a secure storage locker in the restricted access area.
Raw cannabis products shall undergo an extraction process, and the resulting extract made into marijuana products (see MJ05-3.1). Each step of the manufacturing process that produces a product form that differs from the original form used (IE raw cannabis into infused coconut oil) will be labeled with the METRC information of the original product that created it, and logged both into the marijuana inventory tracking system and in-house records. Final products created for sale shall be recorded into marijuana inventory tracking system (METRC), weighed/units, and securely stored until packaged and transferred to a marijuana retail facility.
Throughout this process, the original METRC information from the licensed cultivator shall follow the products produced through the facility and marijuana inventory tracking system until assigned a new METRC ID number for the new product created.

Section 3 – Equipment and Compounds to be Used

Review the requirements under 3 AAC 306.555.

3.1. Describe the equipment and solvents, gases, chemicals, and other compounds the marijuana product manufacturing facility will use to create marijuana concentrates:

SMK will use several methods decarboxilation and extraction to alchemize marijuana materials into usable baking/cooking ingredients. The method of processing shall be:
(1) Decarboxilating (heating) plant material to aprox. 210 degrees to transform the THCA to THC
(2) This material will then be transferred to a usable matrix (such as coconut oil, butter or vegetable glycerin) and held at aprox. 160 degrees for several hours to allow THC from decarboxilated ingredients to extract into the usable matrix.
(3) Finally, that extracted substance will be labeled with a date, batch number, METRC information (i.e. which marijuana was used, how much was used, etc) and stored for use in a recipe for final distribution.
SMK will also use an alcohol extraction of decarboxilated plant materials. Alcohol extraction will take place by submerging the materials into 200 proof food-grade ethyl alcohol and soaking for a period of time to allow THC to extract into the alcohol matrix; this will create an infused-alcohol tincture, which will then be labeled with a date, batch number, METRC information. Infused alcohol will be stored securely and used to create marijuana products.

Received by AMCO 1.28.19

Section 4 – Waste Disposal

Review the requirements under 3 AAC 306.740.

You must be able to certify the statement below. Read the following and then sign your initials in the box to the right: Initials

4.1. The marijuana product manufacturing facility shall give the board at least three days written notice required under 3 AAC 306.740(c) before making marijuana waste unusable and disposing of it.

4.2. Describe how you will store, manage, and dispose of any solid or liquid marijuana waste, including expired or outdated marijuana or marijuana product, in compliance with any applicable laws. Include details about the material(s) you will mix with ground marijuana waste and the processes that you will use to make the marijuana waste unusable for any purpose for which it was grown or produced:

It is our goal to minimize waste at SMK; however, the following materials shall be considered waste: unusable marijuana plant materials, extracted cannabis materials, residue created from extraction process, processed product that fails third party testing, processed product that has expired, processed product that fails to meet in-house quality standards, and processed product which has been recalled/returned to the facility. All forms of waste product shall be recorded in waste log and destroyed as following:

A waste log will be kept recording the following information: date product was declared waste, METRC information pertaining to waste (batch ID, quantity), date AMCO is notified that product is declared unusable and scheduled to be made into waste (at LEAST 3 days prior to destruction), and the date of actual waste destruction, and date recorded into METRC as waste.
All waste will be destroyed in-house in plain view of security cameras. Unusable products/waste shall be destroyed by mixing them in with compostable materials (kitchen garbage/food waste), yard waste (leaves, salt water), or office garbage (shredded paper, cardboard, etc) with at least 51% garbage to cannabis waste ratio. Product will then be recorded as waste in the marijuana inventory tracking system (3AAC 306.740).

After being destroyed, waste shall be held in locked dumpster within sight of exterior security camera until removed by sanitation service. Alternatively, in event of sanitation service interruption, processed/destroyed waste shall be transported by SMK staff to a municipality operated solid waste disposal facility (city dump).

Received by AMCO 1.28.19

Section 5 – Testing Procedure and Protocols

Review the requirements under 3 AAC 306.520 and 3 AAC 306.550.

You must be able to certify the statement below. Read the following and then sign your initials in the box to the right: Initials

5.1. I will ensure that any individual responsible for collecting random samples for required laboratory testing under 3 AAC 306.455 will prepare the necessary accompanying signed statement, provide the signed statement to the marijuana testing facility, and maintain a copy as a business record under 3 AAC 306.755. ☑

Answer "Yes" or "No" to the following question: Yes No

5.2. Will the marijuana product manufacturing facility be performing in-house testing (as defined under 3 AAC 306.990(b)(20)? ☐ ☑

If "Yes" to 6.2, you must be able to certify the statement below. Read the following and then sign your initials in the box: Initials

5.3. The area where in-house testing will occur is clearly identified on the Form MJ-02: Premises Diagram that is submitted with this application. ☐

5.4. Describe the testing procedures and protocols the marijuana product manufacturing facility will follow:

Marijuana products which are created shall be entered into the state marijuana inventory tracking system and issued METRC batch numbers. Product batches will be clearly labeled (product name, batch number, METRC ID, date created), quarantined, and stored securely in the restricted access area. A sample from the product batch will be labeled, manifested, and transported to a marijuana testing facility (as per MJ01-8.1) by a licensed and qualified transporter. Product batch will remain in isolation until test results return from marijuana testing facility. Any products that fail testing parameters for any reason shall be destroyed and logged into marijuana tracking system as such (MJ05-4.1). Otherwise, product batches will be packaged and cleared for sale to licensed marijuana retail stores (MJ-01: 8.1).
All test results will be stored with in-house batch records and provided with sale of any marijuana product to licensed marijuana retail store.

Received by AMCO 2.1.19

Section 8 – Prohibitions

Review the requirements under 3 AAC 306.510.

8.1. I certify that the marijuana product manufacturing facility will not: Initials

a. **sell, deliver, distribute, or transfer any marijuana, marijuana concentrate, or marijuana product directly to a consumer, with or without compensation;**

b. **allow any person, including a licensee, employee, or agent, to consume marijuana, marijuana concentrate, or marijuana product on the licensed premises; or**

c. **manufacture or sell any product that is an adulterated food or drink, closely resembles a familiar food or drink item including candy, or is packaged to look like candy, or in bright colors or with cartoon characters or other pictures or images that would appeal to children.**

I declare under penalty of unsworn falsification that this form, including all accompanying schedules and statements, is true, correct, and complete.

Section 6 – Proposed Marijuana Concentrates and Marijuana Products

Review the requirements under 3 AAC 306.520, 3 AAC 306.525, and 3 AAC 306.560.
Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.

Product Name:	Live Rosin		
Product Type:	concentrate		
Perishable: Yes/No	N	**Shelf Life:** If perishable.	N
Product Description: Details must include the color, shape, and texture.	Live reson pressed from flower and trim. Is sticky, golden color. Smooth texture.		
Ingredients: This box is not applicable to marijuana concentrates.	raw cannabis flower		
Standard Production Procedure and Detailed Manufacturing Process:	Raw marijuana flower is placed in parchment paper and pressed under heat in a rosin press (Rosinbomb Rocket Electric Rosin Tech Press). Resulting product will be quarantined and labeled for testing; upon results product will be packaged.		
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Product Name:	Stoney's THC Infused Coconut Oil		
Product Type:	edible		
Perishable: Yes/No	Yes	**Shelf Life:** If perishable.	1 year
Product Description: Details must include the color, shape, and texture.	This product will be created for cooking use only for Stoney Moose Kitchens and will NOT be sold to the general public as is by itself. Product will be solid at temperature under 70 degrees F, and liquid over that temp. Product will be white with a green hue, and have the smooth texture of coconut oil.		
Ingredients: This box is not applicable to marijuana concentrates.	AMCO approved cannabis plant material to create the THC-infused coconut oil, coconut oil and sorbitol.		
Standard Production Procedure and Detailed Manufacturing Process:	First, decarboxilate plant material to 210 degrees to transform THCA to THC; the liquid will be maintained; leftover plant materials will be disposed of according to MJ-05: 4. Liquid will be transferred to container holding the coconut oil and sorbital, and held at 160 degrees (3 hrs.) to allow THC to extract into coconut oil. Final mixture is cooled, quarantined, labeled for testing; product will be re-melted and poured into jars for in-house use only.		
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Section 7 – Proposed Product Packaging and Sample Labels

Review the requirements under 3 AAC 306.520, 3 AAC 306.565, and 3 AAC 306.570.
Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.

Product Name:	Stoney's Chillax
Product Type:	edible liquid

Packaging Description: Details must include the color(s), size, packaging materials used, total amount of THC, individual serving sizes (if multiple), and other specifics showing compliance with 3 AAC 306.565. Please include photos, drawings, or graphic representations.

Product will be packaged in 5ml glass push-pump bottles. Each bottle will contain 50 mg THC - 10 individual servings. Every pump from bottle will dispense .1ml liquid, or 1mg THC. Five pumps will be a single serving of 5mg THC.
Total 50mg THC per bottle = 10 servings per bottle
Total 5mg THC per serving = 5 pumps (.5ml liquid)

Bottle will be labeled with serving information:
One pump = 1 mg THC, 5 pumps = 5mg THC (single serving)

Bottle will be packaged in a small white cardboard box, sealed and labeled with contents.

*Package picture on previous page

Sample Labels: Provide sample labels showing how the labeling requirements set forth in 3 AAC 306.570 will be met.

Section 6 – Proposed Marijuana Concentrates and Marijuana Products

Review the requirements under 3 AAC 306.520, 3 AAC 306.525, and 3 AAC 306.560.

Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.

Product Name:	Alaskan Snickerdoodle		
Product Type:	edible		
Perishable: Yes/No	Y	**Shelf Life:** If perishable.	6 weeks

Product Description: Details must include the color, shape, and texture.	One sugar cookie covered with cinnamon-sugar. Soft center, crunchy outside. Golden brown color, scored down middle for serving size. Aprox 3" diameter.
Ingredients: This box is not applicable to marijuana concentrates.	THC-Infused coconut oil (as per MJ-05 Section 3.1), sugar, eggs, vanilla, flour, baking soda, cream of tartar, salt, cinnamon & sugar.
Standard Production Procedure and Detailed Manufacturing Process:	Measure THC-infused coconut oil (as per MJ-05 Section 3.1); cream oil and sugar. Add eggs & vanilla. Combine all dry ingredients and mix thoroughly into wet ingredients. Form cookies onto baking sheet. Bake cookies; upon removal from oven, while cookies are still hot and soft score each one down the center to denote serving. Quarantine and label entire production batch for testing. Package, label, store for sale.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Product Description: Details must include the color, shape, and texture.	A rice-krisp made with marshmallow and THC-infused coconut oil . Ganjacrisp will be faintly green, crunchy and sweet. Rectangle shape, approx 3" x 2", with a score line in the middle of the crisp to delineate serving.
Ingredients: This box is not applicable to marijuana concentrates.	rice crisps (rice, sugar, salt, malt flavoring), marshmallow (Corn Syrup, Sugar, Modified Cornstarch, Dextrose, Water, Contains Less Than 2% of Gelatin, Tetrasodium Pyrophosphate (Whipping Aid), Natural and Artificial Flavor, Blue 1), butter, infused coconut oil (as per MJ-05 Section 3.1)
Standard Production Procedure and Detailed Manufacturing Process:	Melt marshmallows; Mix wet ingredients and infused coconut oil. Stir in crisp rice until evenly distributed, then spread evenly onto baking sheet. Allow to cool and harden off; cut into rectangles and score ganjacrisp down the middle to denote serving lines. Label and quarantine batch; take random samples from batch for testing. Upon successful test results, package product for sale.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Product Name:	Moose Antler		
Product Type:	edible		
Perishable: Yes/No	Y	**Shelf Life:** If perishable.	16 weeks

Product Description: Details must include the color, shape, and texture.	A Moose Antler is a chocolate covered pretzel rod. Each pretzel rod is covered with THC-infused chocolate (either white or dark). A finished Moose Antler is a crunchy pretzel rod with a thin layer of infused chocolate on the majority of the pretzel.
Ingredients: This box is not applicable to marijuana concentrates.	White chocolate (Cane Sugar,Cocoa Butter, Whole Milk Powder, Soy Lecithin,Vanilla Extract), dark chocolate (Sugar,unsweetened chocolate, cocoa butter, milk fat,soy lecithin, vanilla), pretzel rods (corn starch, potato starch, rice flour, Soluble corn fiber, palm oil, salt, sugar, cellulose gum, soy lecithin, sodium bicarbonate, yeast extract, sodium acid pyrophosphate, citric acid), THC-infused alcohol tincture
Standard Production Procedure and Detailed Manufacturing Process:	Chocolate is measured, melted and tempered. THC-infused alcohol tincture (as per MJ-05 Section 3.1) is added to melted chocolate mix and incorporated evenly by mixing. Melted chocolate infusion is metered into .5 oz portions and poured onto pretzel sticks, then cooled. Entire batch is quarantined and labeled for testing; then packaged for sale upon results of test.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.
