Alaska Marijuana Control Board

Operating Plan Supplemental

Form MJ-05: Marijuana Product Manufacturing Facility

What is this form?

This operating plan supplemental form is required for all applicants seeking a marijuana product manufacturing facility license and must accompany **Form MJ-01: Marijuana Establishment Operating Plan**, per 3 AAC 306.020(b)(11). Applicants should review **Chapter 306: Article 5** of the **Alaska Administrative Code.** This form will be used to document how an applicant intends to meet the requirements of the statutes and regulations.

If your business has a formal operating plan, you may include a copy of that operating plan with your application, but all fields of this form must still be completed per 3 AAC 306.020 and 3 AAC 306.520(3).

What additional information is required for cultivation facilities?

Applicants must identify how the proposed establishment will comply with applicable regulations regarding the following:

- Equipment, compounds, and processes to be used
- Waste disposal
- Testing procedure and protocols
- Proposed marijuana concentrates and marijuana products
- Proposed product packaging and sample labels
- Prohibitions

This form must be completed and submitted to AMCO's main office before any new or transfer application for a marijuana product manufacturing facility or marijuana concentrate manufacturing facility license will be considered complete.

Section 1 – Establishment Information

Enter information for the business seeking to be licensed, as identified on the license application.

Licensee:	Raspberry Roots, LLC	**MJ License #:**		10856	
License Type:	Marijuana Product Manufacturing Facility				
Doing Business As:	RASPBERRY ROOTS				
Premises Address:	501 Raspberry Road, Suite 102				
City:	Anchorage	**State:**	Alaska	**ZIP:**	99518

Received by AMCO 8.22.18

Section 2 – Overview of Operations

2.1. Provide an overview of your proposed facility's operations. Include information regarding the intake, flow, and transfer of marijuana, marijuana concentrate, and marijuana product at and from your premises:

Given the smaller space that our manufacturing facility has to offer, we would like to establish a 'mak e as ordered' sales model. Rasberry Roots will utilize starting cannabis material (most commonly kn ow as 'trim') from internal source (cultivation license) and also from external cultivators. There will be a deignated individual called the Extraction Coordinator, trained by licensee, that will facilitate all int ake of starting material via METRC and internal accounting procedures. That material will be stored in an organized and secure manner and only accessed by Extraction team. Trim will be processed i n Production batches of 3 pounds. The end product result of the production batch will depend on inv entory needs from sister license (Raspberry Roots) and other Cannabis Retail licenses that carry ou r products (the 'made as ordered' model). All extractions are recorded in a log, referred to as an Inpu t / Output Sheet, outlining the starting material details (batch, weight, & metrc tag) and the ending pr oduct details (batch and weight). Once product is extracted, Extraction Coordinator will arrange for s amples to be delivered to licensed testing facility. During this time the product will be quarantined in a secure location until test result information is returned. Once results are in the extraction team will either package the product in desired increments and label according to regualtions to transfer to an other license OR process the material even further to a new product following our standard producti on procedures. That product will then be sent for testing and quarantined while awaiting the results. Once cleared, packaging into specifc amounts will take place and labels will be put on according to standard operating procedures and compliance regulations. That concludes the production and the prodcuts will be dispersed to Retail licenses, via compliant trip manifest and documentations. Produ cts ready to be delviered will be stored in a secure place (refridgerated if necessary) until delivery. Al l processes are logged and documented and stored as offical business records.

Section 3 – Equipment and Compounds to be Used

Review the requirements under 3 AAC 306.555.

3.1. Describe the equipment and solvents, gases, chemicals, and other compounds the marijuana product manufacturing facility will use to create marijuana concentrates:

Raspberry Roots will utilize a couple techniques for extracting cannabis. First technique is through a closed loop, light hydrocarbon extraction machine. The Extraction unit model has passed all pressu re and safety test in multiple regulated states. The gases used for this unit are N Butane and N Prop ane and accompanied by dry ice to drop temperatures in the extraction tanks. Once the gases have ran through the starting cannabis material and stripped the compounds (thc, etc.) the concentrated oil substance will be placed in a vacuum sealed oven to purge out any solvent residuals from the pr oduct. These ovens are low heat and utilize a dry scroll (magnetic energy) pump to help the pruging process. This process requires about 50 lbs of gas a month and about 200 lbs of dry ice. The secon d extraction process is Rosin technology. It is a heat extraction method that utilizes a flat heat press mechanism to "press" out the chemical compounds from the cannabis plant. With nearly 5 tons of fo rce with only 120 psi air, our Rosin press is all manufactured in the USA and provide industry leadin g safety controls. The unit is mostly automatic so very easy to use. Some other equipments that we will utilize are: a hot plate to add heat to substance to better emulsify our mixes / ingredients, A fillin g machine to streamline consistancy and speed when packaging, and a homonegizer to help make sure all products are equally potent. Also, a ventilation system is set up as a safety precaution to ex change the air in the room 6 times per hour.

Received by AMCO 8.22.18

Section 4 – Waste Disposal

Review the requirements under 3 AAC 306.740.

You must be able to certify the statement below. Read the following and then sign your initials in the box to the right: Initials

4.1. The marijuana product manufacturing facility shall give the board at least three days written notice required under 3 AAC 306.740(c) before making marijuana waste unusable and disposing of it. CAK

4.2. Describe how you will store, manage, and dispose of any solid or liquid marijuana waste, including expired or outdated marijuana or marijuana product, in compliance with any applicable laws. Include details about the material(s) you will mix with ground marijuana waste and the processes that you will use to make the marijuana waste unusable for any purpose for which it was grown or produced:

Raspberry Roots will implement a thorough Disposal Plan to safeguard marijuana consumers, emplo yees, and the community from the potential hazards presented by marijuana waste. The expected w aste that the Company will be disposing of includes left over starting matieral (fan leaves, stems, stal ks, etc.) and any marijuana that fails to meet testing standards or is contaiminated by mistakes (drop ped on floor, etc.) The waste is stored away from other marijuana product in containers strictly for wa ste material. The Company will ensure that all marijuana waste is rendered unusable prior to leaving the facility, so it will grind and incorporate the marijuana waste with either non compostable or compo stable solid wastes so that the resulting mixture is at least fifty percent (50%) non marijuana waste.M anagement will ensure that the resulting mixture is composed of no more than fifty percent (50%) ma rijuana by volume. The Waste mixture is placed in heavy duty contractor bags and placed in the dum pster the night before or the morning of Trash pick up. A Disposal Log including the date and weight of disposed products. This information will be kept as part of the Company's business records.

Received by AMCO 8.22.18

Section 5 – Testing Procedure and Protocols

Review the requirements under 3 AAC 306.520 and 3 AAC 306.550.

You must be able to certify the statement below. Read the following and then sign your initials in the box to the right:	Initials
5.1. I will ensure that any individual responsible for collecting random samples for required laboratory testing under 3 AAC 306.455 will prepare the necessary accompanying signed statement, provide the signed statement to the marijuana testing facility, and maintain a copy as a business record under 3 AAC 306.755.	MAK

Answer "Yes" or "No" to the following question:	Yes	No
5.2. Will the marijuana product manufacturing facility be performing in-house testing (as defined under 3 AAC 306.990(b)(20)?	☐	☑

If "Yes" to 6.2, you must be able to certify the statement below. Read the following and then sign your initials in the box:	Initials
5.3. The area where in-house testing will occur is clearly identified on the Form MJ-02: Premises Diagram that is submitted with this application.	

5.4. Describe the testing procedures and protocols the marijuana product manufacturing facility will follow:

All manufactured marijuana products will be processed into specific batches. These batches are represented as production batch es and segregated from all other marijuana materials and mixing ingredients. This includes both during manufactuing of the prod ucts and storage of the products. A designated agent from the facility will collect a testing sample at random from each batch. Th e individual responsible for collection will prepare a signed statement attesting that each sample was randomly selected, provide a signed statement to the testing facility, and maintain a copy as a business record. Raspberry Roots will transport all samples to a licensed testing facility in compliance with the state regulations and the company's transportation policies. The facility will ensu re that any individual transporting marijuana has a valid marijuana handler permit issued by AMCO. The facility will maintain all t esting results as part of its official business records. The facility will not sell or transport any products from the batch until the tes ting facility has completed its testing and provided those results to the facility. Raspberry Roots will comply with any request fro m AMCO for a random sample from any products and shall bear the expense for all such requests.

Received by AMCO 8.22.18

Section 8 – Prohibitions

Review the requirements under 3 AAC 306.510.

8.1. I certify that the marijuana product manufacturing facility will not: Initials

a. **sell, deliver, distribute, or transfer any marijuana, marijuana concentrate, or marijuana product directly to a consumer, with or without compensation;** KAK

b. **allow any person, including a licensee, employee, or agent, to consume marijuana, marijuana concentrate, or marijuana product on the licensed premises; or** KAK

c. **manufacture or sell any product that is an adulterated food or drink, closely resembles a familiar food or drink item including candy, or is packaged to look like candy, or in bright colors or with cartoon characters or other pictures or images that would appeal to children.** KAK

I declare under penalty of unsworn falsification that this form, including all accompanying schedules and statements, is true, correct, and complete.

Section 6 – Proposed Marijuana Concentrates and Marijuana Products

Review the requirements under 3 AAC 306.520, 3 AAC 306.525, and 3 AAC 306.560.
Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.

Product Name:	Canna Ease		
Product Type:	Topical Salve		
Perishable: Yes/No	no	**Shelf Life:** If perishable.	

Product Description: Details must include the color, shape, and texture.	This topical salve is an oil based product that has a smooth texture and a natural light green color. Similar to a standard topical. This salve will be packaged in containers with screw on lids.
Ingredients: This box is not applicable to marijuana concentrates.	Cannabis oil, Arnica, calendula petals, clove, nutmeg, comfrey, turmeric, ginger, cayenne pepper, black pepper, shea butter, coco butter, proprietary blend of essential oils, vitamin E, bees wax
Standard Production Procedure and Detailed Manufacturing Process:	Cannabis concentrate is decarboxylated by heating at a propriety temperature for about an hour. The same is done separately for the herbal oil. Both oils are added together and blended to a homogenized mixture. Then the shea butter, coco butter, and bees wax is gently melted and added to the cannabis mixture. Once the oil mixture is cooled to 70 degrees, the proprietary blend of essential oils and vitamin E is added, mixed well, and placed into containers. It is cooled until solid.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.	

Section 7 – Proposed Product Packaging and Sample Labels

Review the requirements under 3 AAC 306.520, 3 AAC 306.565, and 3 AAC 306.570.
Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.

Product Name:	Canna Ease
Product Type:	Topical Salve

Packaging Description: Details must include the color(s), size, packaging materials used, total amount of THC, individual serving sizes (if multiple), and other specifics showing compliance with 3 AAC 306.565. Please include photos, drawings, or graphic representations.	The topical salve will be filled into white 4 oz Polypropylene jars with dome shaped screw on caps. Label containing the logo, ingredients, warnings, and test results will be applied on the outside via sticker. TWISTED TUNDRA RASPBERRY ROOTS
Sample Labels: Provide sample labels showing how the labeling requirements set forth in 3 AAC 306.570 will be met.	Raspberry Roots Supply 5a-10856 501 Raspberry Rd Anchorage, AK 99518 Canna Ease – 50mg Production Date: 04-05-18 Exp Date: 11-05-18 Dark Star Indica 207 DKS 031418 50mg THC (Retailer Name) (Retailer License #) 00018-090-000-012 **Not for Oral Consumption** 1) "Marijuana has intoxicating effects and may be habit forming and addictive."; (2) "Marijuana impairs concentration, coordination, and judgment. Do not operate a vehicle or machinery under its influence."; (3) "There are health risks associated with consumption of marijuana."; (4) "For use only by adults twenty-one and older. Keep out of the reach of children."; (5) "Marijuana should not be used by women who are pregnant or breast feeding." TWISTED TUNDRA Canna Ease Topical (Not for Oral Consumption) *Label will wrap the outside of container Details and verbiage will be as applicable and unique per lot number

Section 6 – Proposed Marijuana Concentrates and Marijuana Products

Review the requirements under 3 AAC 306.520, 3 AAC 306.525, and 3 AAC 306.560.
Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.

Product Name:	Canamo Budder		
Product Type:	Concentrate		
Perishable: Yes/No	no	**Shelf Life:** If perishable.	

Product Description: Details must include the color, shape, and texture.	Canamo Budder get its name from its peanut butter like texture. Its sticky texture comes from its high terpene profiles. Canamo Budder can range from a bright blonde yellow to tannish brown in color.
Ingredients: This box is not applicable to marijuana concentrates.	n/a
Standard Production Procedure and Detailed Manufacturing Process:	2 ways in which Canamo Budder can be produced: 1. Rosin technology is a heat and pressure extraction method that utilizes a flat heat press mechanism to "press" out the chemical compounds from the cannabis plant. First, place cannabis flower or trim into a micron sock. Placed micro sock on heated rosin press plate and apply desired pressure. The heat and pressure will cause the Canamo Budder to ooze from the micro sock. Congregate the oils for testing, packaging, and selling. 2. Closed loop hydrocarbon extraction process (approved by all governing bodies). Place cannabis flower or trim into a preparation sock. Place the sock into the extraction unit. Pass solvent gas through the cannabis material using temperature fluctuations. This will cause the concentrated cannabinoids molecules to separate from pant material and drop into a collection pot (part of the unit). Recover the gas to a separate column. Take apart the collection pot and pour concentrate oils onto a piece of parchment paper. The product goes into heated vacuum ovens to purge out all left over gas residuals. Once internally deemed clean, whip the concentrate until it becomes a substance that resembles the desire outcome - Canamo Budder. Congregate the oils for testing, packaging, and selling.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.	

Section 7 – Proposed Product Packaging and Sample Labels

Review the requirements under 3 AAC 306.520, 3 AAC 306.565, and 3 AAC 306.570.
Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.

Product Name:	Canamo Budder
Product Type:	Concentrate

Packaging Description: Details must include the color(s), size, packaging materials used, total amount of THC, individual serving sizes (if multiple), and other specifics showing compliance with 3 AAC 306.565. Please include photos, drawings, or graphic representations.	First, the CanamoBudder will be weighed into specific ingrements ranging from 0.5 grams to 7 grams and placed in a small, air tight glass container. The glass containers ranges from 5ml to 10 ml and have a silicon lid that snaps onto the container. The lid of the container will be solid color with logo printed on it. Second, the glass container with the marijuana concentrate inside will be placed into a child proof blister package. The blister package will feature a custom insert to display the brand's logo and product information, along with the applicable labels for regulatory compliance. The product will be placed in an opaque bag before leaving retail establishments

Sample Labels: Provide sample labels showing how the labeling requirements set forth in 3 AAC 306.570 will be met.	**Raspberry Roots 5a-10856** Canamo Budder - 1.0g Weight: 1.0g THC: 63.9% CBD: 0.8% Total: 69.74% **[Process Description]** Metrc# 1A40203000070E500000008 (RETAILER NAME) Strain: Kimbo Kush Indica Dom Batch: CC KBK 103118b (RETAIL LICENSE #) 00018-090-000-012 Marijuana has intoxicating effects and may be habit forming and addictive. Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.

Product Name:	Canamo Crumble		
Product Type:	Concentrate		
Perishable: Yes/No	no	**Shelf Life:** If perishable.	

Product Description: Details must include the color, shape, and texture.	Crumble gets its name from its crumble like appearance. It can vary from a bright yellow to tan in color. The texture is like that of a honeycomb as well.
Ingredients: This box is not applicable to marijuana concentrates.	
Standard Production Procedure and Detailed Manufacturing Process:	A brief step-by-step process for a closed loop, light hydrocarbon gas extraction will be listed below: A. Fill solvent tank with Butane/Propane mix. B. Fill material column with dried cannabis plant material. C. Review system; make sure all hoses, gaskets, and clamps are working properly. D. Open solvent tank valve to allo solvents to filter through the material column. E. Once all solvent has passed through the material the recovery tank valve can be opened. Solvents and cannabis extract will flow into recovery tank. F. The solvent is then re-collected using passive recovery. G. The system is then de-pressurized. Recovery tank can now be disassembled and the cannabis extract can be removed. H. Cannabis extract is then poured and purged of all solvents in a degassing vacuum oven for at least 36 hours. I. After purge, certain I.P. manipulation processes take place (aeration, whipping, etc.) that creates the desired structural outcomes. Natire has a factor in the desired outcome as well. Final step is to congregate the oils for testing, packaging, and selling.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.	
Section 7 – Proposed Product Packaging and Sample Labels

Review the requirements under 3 AAC 306.520, 3 AAC 306.565, and 3 AAC 306.570.

Product Name:	Terp Diamonds		
Product Type: Choose one.	Concentrate		
Perishable: Yes/No	no	**Shelf Life:** If perishable.	
Intended Use: Smokable/ edible/topical/wholesale/etc.	Smokable		

Product Description: Details must include the color, shape, and texture.	Terp Diamonds are a stable crystalline rock-like structure with high THC-A content and a well-balanced ratio of terpenes. The product resembles that of a crystal and is clear to off yellow to gold in color. The crystal is accompanied by amber oil (mostly terpenes).

Ingredients:	n / a

Standard Production Procedure and Detailed Manufacturing Process:	A brief step-by-step process for a closed loop, light hydrocarbon gas extraction will be listed below: A. Fill solvent tank with Butane/Propane mix. B. Fill material column with dried cannabis plant material. C. Review system; make sure all hoses, gaskets, and clamps are working properly. D. Open solvent tank valve to allow solvents to filter through the material column. E. Once all solvent has passed through the material, the recovery tank valve is opened and Solvents and cannabis extract will flow into the recovery tank. F. The solvent is then re-collected using passive recovery. G. The system is then de-pressurized. Recovery tank can now be disassembled and the cannabis extract can be removed. H. After cannabis extract is removed, certain I.P. manipulation processes take place (aeration, whipping, etc.) that creates the desired structural outcomes. I. Cannabis extract is then purged of all solvents in a degassing vacuum oven for at least 36 hours. Final step is to congregate the oils for testing, packaging, and selling.

Section 7 – Proposed Product Packaging and Sample Labels

Review the requirements under 3 AAC 306.520, 3 AAC 306.565, and 3 AAC 306.570.
Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.

Product Name:	Terp Diamonds
Product Type:	Concentrate

Packaging Description:
Details must include the color(s), size, packaging materials used, total amount of THC, individual serving sizes (if multiple), and other specifics showing compliance with 3 AAC 306.565. Please include photos, drawings, or graphic representations.

First, the Terp Diamonds will be weighed into specific increments ranging from 0.5 grams to 7 grams and placed in a small, air tight glass container. The glass containers range from 5ml to 10ml and have a silicon lid that snaps onto the container. The lid of the container will be solid color with logo printed on it. THC will be approx 80% to 95%
Second, the glass container with the marijuana concentrate inside will be placed into a child-proof blister package. The blister package will feature a custom insert to display the brand's logo an d product information, along with the applicable labels for regulatory compliance.

Sample Labels:
Provide sample labels showing how the labeling requirements set forth in 3 AAC 306.570 will be met.

Product Name:	Cannabis Topical Oil		
Product Type:	Base for topical products		
Perishable: Yes/No	no	**Shelf Life:** If perishable.	

Product Description: Details must include the color, shape, and texture.	This is a solid coconut oil infused with cannabis, so it will be a light green in color and smooth in texture. This product will not be sold to the public, but is used as the base of the other topical products.
Ingredients: This box is not applicable to marijuana concentrates.	Coconut oil, cannabis, emu oil, olive oil, and Sea Buckthorn oil
Standard Production Procedure and Detailed Manufacturing Process:	Cannabis is decarboxylated by heating it in an oven at 220 degrees for one hour and fifteen minutes. It is then added it to the oil mixture from the other ingredients and emulsified with the cannabis concentrate using heat. This oil / salve will be kept in the refrigerator until used.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.	*This product is not for sale, but is the base product used by the other topical products.

Product Name:	Honey Grams		
Product Type: Choose one.	concentrate		
Perishable: Yes/No	Yes	**Shelf Life:** If perishable.	
Intended Use: Smokable/ edible/topical/wholesale/etc.	smokeable		

Product Description: Details must include the color, shape, and texture.	Honey Grams are a combination of two already approved concentrate products: Crumble & vape Oil The end result is crumble like substance that is covered with vape-able oil
Ingredients:	Crumble & cannabis oil
Standard Production Procedure and Detailed Manufacturing Process:	Both crumble and cannabis oil are created through our approved hydrocarbon extraction process. First, we weigh out the desired increment of crumble into a glass container. Then, using a syringe, we drizzle desired amount of cannabis oil on top of the crumble. Products will be sent in for testing after the congregation of the products occurs
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Product Name:	Delights Oil		
Product Type: Choose one.	Other Marijuana Product		
Perishable: Yes/No	Yes	**Shelf Life:** If perishable.	1 year
Intended Use: Smokable/ edible/topical/wholesale/etc.	Smokeable / Wholesale		

Product Description: Details must include the color, shape, and texture.	The color of Delight's Oil range from dark green to a light yellow/amber color. Consistency is that of a thick oil.
Ingredients:	Cannabis oil
Standard Production Procedure and Detailed Manufacturing Process:	Oil is derived from extracting the cannabis compounds with our closed loop extraction machine. The extracted cannabis oil is then heated in our vacuum ovens at a specific temperature to purge out all residual solvents and to active the cannabinoids. Oil is then congregated for testing and stored in large syringes until packaged for sale. There is no expiration date with marijuana concentrates, however, product may alter cannabinoid profile after one years time. Additional testing will occur if that happens.

Product Name:	Canamo Sugar Wax		
Product Type: Choose one.	concentrate		
Perishable: Yes/No	no	**Shelf Life:** If perishable.	
Intended Use: Smokable/ edible/topical/wholesale/etc.	smoke		

Product Description: Details must include the color, shape, and texture.	Sugar Wax is the word used to describe concentrate that has begun to resemble the consistency of ear wax while not completely drying out into crumble, therefore, wax is a mix between a shatter and a crumble. It is actually the stage before the product hardens its texture. Wax can be lit up with a sugary sparkle that can vary from a blonde yellow to dark amber hue. Or in some cases, maintain a dark greenish amber color.

Ingredients:	n/a

Standard Production Procedure and Detailed Manufacturing Process:	A brief step-by-step process for a closed loop, light hydrocarbon gas extraction will be listed below: A. Fill solvent tank with Butane/Propane mix. B. Fill material column with dried cannabis plant material. C. Review system; make sure all hoses, gaskets, and clamps are working properly. D. Open solvent tank valve to allow solvents to filter through the material column. E. Once all solvent has passed through the material the recovery tank valve can be opened. Solvents and cannabis extract will flow into recovery tank. F. The solvent is then re-collected using passive recovery. G. The system is then de-pressurized. Recovery tank can now be disassembled and the cannabis extract can be removed. H. Cannabis extract is then poured and purged of all solvents in a degassing vacuum oven for at least 36 hours. I. After purge, certain I.P. manipulation processes take place (aeration, whipping, etc.) that creates the desired structural outcomes. Natire has a factor in the desired outcome as well. Final step is to congregate the oils for testing, packaging, and selling.

Product Name:	Canamo Vapes		
Product Type:	Concentrate		
Perishable: Yes/No	no	**Shelf Life:** If perishable.	

Product Description: Details must include the color, shape, and texture.	Vape Oil is the softest, most viscous form of extracted cannabis. Usually sticky and runny like typical honey oil. Color ranges from a bright amber to a golden brown. Our Cannabis Vape Oil sold in cartridges to be smoked through vaporizing gadgets. To lighten the viscosity of the oil and allow for vaping mechanisms, oil is cut with certain mediums. Canamo vapes will consist of 0.5 to 1.0 gram of oil which will equate to approx. 200 to 900 mg of THC (dependent on the individual lot number) per each 0.5 ml to 1.0ml cartridge, respectively.
Ingredients: This box is not applicable to marijuana concentrates.	Marijuana shatter, viscosity cutting agent (polyethylene glycols, medium-chain triglycerides, Tec Temper, Terpenes, CBD, or equivalent thereof)
Standard Production Procedure and Detailed Manufacturing Process:	1. Put the canamo shatter into a Pyrex beaker and heat to specified temperature. 2. Process canamo shatter through a distillation procedure to further separate the cannabis compounds. End result product is still the same, just cleaner and more pure. With either starting substance, wait until product is at desired temperature and add cutting medium (i.e Terpenes, MCT, PEG, Tec Temper, etc.) Immediately use heated stirrer to emulsify the blend. Let the solution cool to specified temperature and gather a sample for testing. Upon successful results, fill the cartridges using a syringe with 0.5 ML, or 1.0 ML depending on desired dosing, each with the finished emulsified solution.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Product Name:	Caviar Cone		
Product Type: Choose one.	other marijuana product		
Perishable: Yes/No	No	**Shelf Life:** If perishable.	
Intended Use: Smokable/ edible/topical/wholesale/etc.	Smokeable		

Product Description: Details must include the color, shape, and texture.	Caviar cones are made with a preroll cone filled with flower, painted with concentrate, and rolled in kief. They are light brown in color, shaped like a preroll with a sand like texture.
Ingredients:	Small = 0.5g gram of flower, one 84mm preroll cone, 0.15 gram oil concentrate, and 0.15 gram kief. Large = 1.0g gram of flower, one 98mm preroll cone, 0.30 gram oil concentrate, and 0.30 gram kief.
Standard Production Procedure and Detailed Manufacturing Process:	Take preroll cone, tare weight increment on scale, then pack with desired flower amount. Paint the outside of the cone with desired amount of oil concentrate. Roll the painted preroll in desired amount of kief. Stop after each step to verify weight on calibrated scale. Once completed let air dry / harden for a few minutes.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Product Name:	Denali Drops		
Product Type: Choose one.	edible		
Perishable: Yes/No	Yes	**Shelf Life:** If perishable.	8 months
Intended Use: Smokable/ edible/topical/wholesale/etc.	edible		

Product Description: Details must include the color, shape, and texture.	Denali Drops will come in a small, hard, circular/mountain shape. Approx Different flavor profiles will alter the color of the product. Colors (red, orange, pink, purple, blue, yellow, green, brown, beige) will be muted to the best of our ability to not cater to children. The finish will be smooth and glossy with a powdery sugar residue to prevent sticking together in packaging.
Ingredients:	Sugar, Light Corn Syrup, Filtered Water, flavoring, cannabis concentrate (our own approved concentrate - Sugar Wax, Shatter, crumble, or Delights Oil), powdered sugar. or equivalent thereof
Standard Production Procedure and Detailed Manufacturing Process:	Combine the following over medium-high heat: Sugar, Light Corn Syrup and Filtered Water. Stir until the sugar is completely dissolved. While mixture is heating, mix desired flavor and desired amount of cannabis concentrate together to emulsify and then wait to mix with the other ingredients. Once sugar/water substance gets to 300 degrees and fully blended remove from heat. As mixture starts to cool, pour the flavor with cannabis concentrate into the mixture and continue to stir until fully homogenized. Carefully pour into candy mold and let cool to harden.

Product Name:	Moose Turds		
Product Type:	Edible		
Perishable: Yes/No	Yes	**Shelf Life:** If perishable.	8 months

Product Description: Details must include the color, shape, and texture.	Moose Turds will be a taffie like edible consisting of 5MG of THC. Dark brown in color with a smooth exterior and about 3/4 inch in length and ½ inch width.
Ingredients: This box is not applicable to marijuana concentrates.	Cannabis concentrate (our own approved concentrate - Sugar Wax, Shatter, crumble, or Delights Oil), granulated sugar, light corn syrup, butter, cocoa, sweetened condensed skim milk, water, vanilla extract, salt. Or equivalent thereof
Standard Production Procedure and Detailed Manufacturing Process:	Melt butter and mix in all ingredients including marijuana and mix thoroughly using a homogenizer mixer. Set mixture o ver medium / low heat until candy reaches 250degree F. When the candy reaches 250 degrees F, pour it onto a silicone, non stick pad. Allow it to cool for 7 to 10 minutes. As the candy cools enough to be handled, fold the edges over onto t he center. Eventually you will be able to pick up the ball of candy, and, with buttered hands, twist and pull the candy for a good 10 minutes or until it begins to turn lighter in color. Let the candy rest for an hour or so, then pull and twist it ag ain for 5 minutes. This process will work air into the candy. When the candy has become an even lighter shade of brown , divide it into three or four chunks and roll those into ropes that are 1/2 in. thick. They thin will be cut into specific sizes to match dosing and pressed to delineate individual servings.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Product Name:	Moose Turds
Product Type:	Edible

Packaging Description: Details must include the color(s), size, packaging materials used, total amount of THC, individual serving sizes (if multiple), and other specifics showing compliance with 3 AAC 306.565. Please include photos, drawings, or graphic representations.	For 50 MG pack = First, the infused Moose Turd will be measured out in a cylindrical shape that is 1/2 inch thick. Then, the cylindrical shape will be cut into 3.75 inch increments. Each 3.75 inch long x 1/2 inch thick cylindrical piece of candy represents 25 MG of THC. Serving sizes of 5 MG of THC will be delineated by deep cut lines every 0.75 inches. There will be five clearly marked 0.75 in. long X 0.5 in. thick per each bar of Moose Turd. The candy bar (Moose Turds bars) will be placed on food grade, grease proof, liner boards to prevent sticking and to keep the integrity of the product shape. Two bars will then be placed in each Mylar Bag. One delineated piece of candy (approx 0.75" long) = one 5mg THC serving For 10 MG pack = First, the infused Moose Turd will be measured out in a cylindrical shape that is 1/2 inch thick. Then, the cylindrical shape will be cut into 1.5 inch increments. Each 1.5 inch long x 1/2 inch thick cylindrical piece of candy represents 10 MG of THC. Serving sizes of 5 MG of THC will be delineated by deep cut lines every 0.75 inches. There will be 2 clearly marked 0.75 in. long X 0.5 in. thick and then placed on food grade, grease proof, liner boards to prevent sticking and to keep the integrity of the product shape. Just one bar will then be placed in each Mylar Bag. One delineated piece of candy (approx 0.75" long) = one 5mg THC serving Mylar Bags are resealable bags made from mylar material and used to help with the effects of heat, smell, light, moisture, oxygen, etc. on the products. They have to ability to be heat sealed to prevent any tampering of products. The Mylar packaging will feature custom stickers to display the brand's logo and product information, along with the applicable labels for regulatory compliance and Food and Safety regulations (ingredients, etc.). *See page 8 for image representations*

Product Name:	Northern Delight Snow Caps		
Product Type:	Edible		
Perishable: Yes/No	yes	**Shelf Life:** If perishable.	6-8 months

Product Description: Details must include the color, shape, and texture.	Northern Delights Snow Caps will be approx ½" squares by ¼" in height. They will come in a white based color with hues of other various muted colors (blue, red, green, orange, yellow, purple, brown, pink). The various muted colors will come from the different flavorings that will be added. No addi tional coloring will be added as to not to increase the visual appeal (results in muted colored can dies). The texture of the Snow Caps will be hard with a powdery sugar coating. This product will c onsist of ten (10) units per package with each Snow Cap containing five (5) mg of THC.
Ingredients: This box is not applicable to marijuana concentrates.	sugar, corn syrup, water, palm oil, gum tragacanth, egg white, titanium dioxide, cellulose gum, natural & artificial flavors, modified corn starch, potassium sorbet, acetic acid, confectioner's sugar, [INSERT FLAVOR HERE], cannabis concentrate (our own approved concentrate - Sugar Wax, Shatter, crumble, or Delights Oil). Or equivalent thereof
Standard Production Procedure and Detailed Manufacturing Process:	Evenly mix Marijuana (oil / concentrate) with specific amount of flavoring until homogenized. Take homoge nized substance and mix with specific amount of gum paste (Sugar, water, white corn syrup, tylose, shortener, gelatin) by lining pan with powdered confectioner's sugar and kneeding the oil / flavor into the paste. Amount of each ingredients fluctuates depending on the concentration level of the cannabis oil used. Next, Roll out the dough/paste using a rolling pin, adding powdered confectioner's sugar to prevent the paste from sticking. Then use the ½"cut out to cut the individual hard candies. Sprinkle powdered confectioner's sugar on the cut candies to prevent them from sticking together. Place on new pan, cover lightly, and leave to air dry.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.	 *flavoring may present muted coloring, but no additional coloring will be added

Product Name:	Canamo Capsules		
Product Type:	Edible		
Perishable: Yes/No	yes	**Shelf Life:** If perishable.	12 months

Product Description: Details must include the color, shape, and texture.	Canamo Capsules will consist of ten (10) capsules per package with each capsule containing 5 mg of THC. Each capsule will be oval in shape with a smooth exterior and about 2cm long. The capsule oil will be golden to amber to brown in color. The capsules will hold between 0.3 ML and 0.6 ML of oil
Ingredients: This box is not applicable to marijuana concentrates.	MCT oil (coconut oil), cannabis concentrate (our own approved concentrate - Sugar Wax, Shatter, crumble, or Delight's oil), water soluble gelatin and/or vegetarian capsule. Or equivalent thereof
Standard Production Procedure and Detailed Manufacturing Process:	Mix desired amount of marijuana concentrate with desired amount of MCT oil while applying heat and stirring the mixture. Add the MCT oil in phases to create a more effective emulsification. Set up capsule filling machine and place capsules in the machine. Using syringe, absorb the desired amount of infused oil and disperse into the capsules (amount dependent on potency to achieve desired 5mg per capsule). Then use the capsule filling machine to close each capsule. Expiration date is expected to be 12-14 months with our air tight, food grade packaging.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.	

Section 7 – Proposed Product Packaging and Sample Labels

Review the requirements under 3 AAC 306.520, 3 AAC 306.565, and 3 AAC 306.570.

Product Name:	Canna Smooth Lip Balm		
Product Type:	Topical		
Perishable: Yes/No	no	**Shelf Life:** If perishable.	

Product Description: Details must include the color, shape, and texture.	This is lip balm in the traditional twist up tube containers. The color is a nat ural white to green and will vary slightly with each batch, depending on the strains used. The texture is a smooth oil based product like any typical lip b alm sold in stores.
Ingredients: This box is not applicable to marijuana concentrates.	Cannabis concentrate (our own approved concentrate - Sugar Wax, Shatter, crumble, or Delights Oil), coco butter, shea butter, vitamin E, bees wax proprietary blend of essential oils
Standard Production Procedure and Detailed Manufacturing Process:	Cannabis concentrate is decarboxylated by heating at a proptiety temperature for about an hour. The desired amount of coco butter, shea butter, and bees wax is gently melted into the cannabis concentrate using a hot plate to emulsify the substances. Once cool, vitamin E and a proprietary blend of essential oils is mixed into the oil and poured into containers and sealed and set aside to harden at room temperature.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Product Name:	Simple Sludge		
Product Type: Choose one.	edible		
Perishable: Yes/No	Yes	**Shelf Life:** If perishable.	3 months
Intended Use: Smokable/ edible/topical/wholesale/etc.	Edible		

Product Description: Details must include the color, shape, and texture.	Delights Simple Syrup is a thick liquid that will be cloudy in color. The liquid is sticky and resembles dark amber hues to start but can take on the color of the flavor that is added. Colors (red, orange, pink, purple, blue, yellow, green, brown, beige) will be muted to the best of our ability to not cater to children.
Ingredients:	Filtered water, granulated sugar, vegetable glycerin, absorbic acid, flavoring, cannabis concentrate (our own approved concentrate - Sugar Wax, Shatter, crumble, or Delights Oil). Or equivalent thereof (sunflower lecithin or agave nectar)
Standard Production Procedure and Detailed Manufacturing Process:	First, add desired amount filtered water and granulated sugar into a heated pan to bring to a boil. While heating water and sugar, mix desired amount of cannabis concentrate, vegetable glycerin, and flavoring together - applying heat to help emulsify the substance. Pour the cannabis infused substance into the water/sugar mix and continue to stir and heat until all ingredients are blended together. Let cool and then package in desired amounts to meet desired goals.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.
