Alaska Marijuana Control Board

Operating Plan Supplemental

Form MJ-05: Marijuana Product Manufacturing Facility

What is this form?

This operating plan supplemental form is required for all applicants seeking a marijuana product manufacturing facility license and must accompany the **Marijuana Establishment Operating Plan (Form MJ-01)**, per 3 AAC 306.020(b)(11). Applicants should review **Chapter 306: Article 5** of the **Alaska Administrative Code.** This form will be used to document how an applicant intends to meet the requirements of those regulations. If your business has a formal operating plan, you may include a copy of that operating plan with your application, but all fields of this form must still be completed per 3 AAC 306.020 and 3 AAC 306.520(3).

What additional information is required for product manufacturing facilities?

Applicants must identify how the proposed establishment will comply with applicable regulations regarding the following:

- Prohibitions
- Equipment, compounds, and processes to be used
- Proposed marijuana concentrates and marijuana products
- Proposed product packaging and sample labels
- Waste disposal plan
- Testing

This form must be submitted to AMCO's main office before any marijuana product manufacturing facility license application will be considered complete.

Section 1 – Establishment Information

Enter information for the business seeking to be licensed, as identified on the license application.

Licensee:	Raspberry Roots, LLC	**License Number:**	10856		
License Type:	Marijuana Product Manufacturing				
Doing Business As:	Raspberry Roots				
Premises Address:	501 Raspverry Road Suite 102				
City:	Anchorage	**State:**	ALASKA	**ZIP:**	99518

Alaska Marijuana Control Board

Operating Plan Supplemental

Form MJ-05: Marijuana Product Manufacturing Facility

Section 2 – Prohibitions

Applicants should review 3 AAC 306.510 and be able to answer "Agree" to all items below.

The marijuana product manufacturing facility will not:	Agree	Disagree
Sell, deliver, distribute, or transfer any marijuana, marijuana concentrate, or a marijuana product directly to a consumer, with or without compensation	✓	
Allow any person, including a licensee, employee, or agent, to consume marijuana, marijuana concentrate, or a marijuana product on its licenses premises	✓	

The marijuana product manufacturing facility will not manufacture or sell any product that:	Agree	Disagree
Is an adulterated food or drink	✓	
Closely resembles a familiar food or drink item including candy	✓	
Is packaged to look like candy, or in bright colors or with cartoon characters or other pictures or images that would appeal to children	✓	

Section 3 – Equipment, Compounds, and Processes to be Used

Review the requirements under 3 AAC 306.555, and identify how the proposed premises will meet the listed requirements.

Describe the equipment and solvents, gases, chemicals, and other compounds the marijuana product manufacturing facility will use to create marijuana concentrates:

Raspberry Roots will employ the following methods/techniques and equipment to create and process marijuana concentrate and other marijuana by-products and extractions: Closed loop extractor that uses Butane, N-Butane, ethanol, CO2 and/or Iso-Butane for extraction. Also used is a recovery pump, filter drier, sifters, degassing vacuum, Erienmeyer flasks and a magnetic stirring plate, vacuum assisted Whitman filter system and filter vacuum flask and rotary evaporator, Vacuum Pump and rosin pressure press.
The facility may also use methods of extraction that do not require solvents such as keif sifting, cold water/ dry ice methods, and heat-press for rosin extracting in the future.

Alaska Marijuana Control Board

Operating Plan Supplemental

Form MJ-05: Marijuana Product Manufacturing Facility

Describe the processes to be used to create marijuana concentrates:

A variety of marijuana concentrates and marijuana products will be created through the use of water-, food-, oils, food fats and solvent-based (N butane, iso butane, propane, ethanol, CO2, and/or hexane.) extractions. The facility will use a professional grade equipment system with proper ventilation and control of all possible ignition sources. The professional grade equipment will be used in compliance with the manufacturer's stated pressure ratings and have certification from a licensed engineer that the system is commercially manufactured, is safe for its intended use, and is built to code and in compliance with local fire, safety, and building code requirements. The facility will utilize a closed loop extraction system where marijuana plant matter is combined with a solvent or combination of solvents (N butane, iso butane, propane or hexane, and/or ethanol) which causes the resin glands from the plants to be detached from the plant matter and suspended in the solvent solution. To remove wax and residual solvents, the solution is distilled and/or winterized, leaving behind concentrated cannabis. The concentrated cannabis is then placed into a vacuum oven for 1-10 days in order to achieve th desired finish for a particular marijuana concentrate product texture such as shatter, or wax or may be combined with other ingredients to create a marijuana product (ie edible). Any extraction equipment used by the facility will be maintained and operated in compliance with the manufacturer's directives, and regularly inspected and serviced to maintain its integrity and function. All employees and agents operating, handling, inspecting, and cleaning the systems and vessels will be fully trained on how to use and maintain the system, and will have direct access to all applicable instructional and safety documents at all times. Each licensee, employee, or agent who is required or permitted to be physically present at the facility will have both a marijuana handler permit card and a food card. Please see following concentrate and product descriptions for a more detailed and in-depth review of the process for creating the product/concentrate, packaging, and method of consumption.

Section 4 – Proposed Marijuana Concentrates and Marijuana Products

Review the requirements under 3 AAC 306.520 - 3 AAC 306.525 and 3 AAC 306.560, and identify how the proposed establishment will meet the listed requirements. **Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.**

Product Name:	Canamo Capsules
Type:	Edible

Product Description: Details must include the color, shape, and texture.	Canamo Capsules will consist of ten (10) gel caps per package with each gel cap containing 5 mg of THC. The gel cap is ovular in shape with a smooth exterior that is clear with a slight yellowish tint. The infused oil inside will be a yellowish/golden to brownish color. Each capsule is a size "0", holds about 500 mg of liquid, and is made of a kosher, vegetarian, non-GMO gelatin. Only 5mg of the 500mg of liquid will be active THC.

Ingredients: This box is not applicable to marijuana concentrates	Marijuana (oil or concentrate), coconut oil, vegetarian gelatin capsule (made only from water and hydroxypopylmethycellulose- derived from vegetable cellulose)

Standard Production Procedure and Detailed Manufacturing Process:	Mix marijuana (oil, concentrate or syrup) with extra virgin coconut oil into a crockpot and let simmer for three hours, stirring the mixture every half hour for the first two hours. After cooking, turn off crockpot and let sit for fifteen minutes to cool. Strain infused coconut oil through cheese cloth and into a new bowl. Set up capsule filling machine and place twenty-four '0' size vegetarian gel capsules in the machine. Using syringe, absorb the infused oil and disperse into the capsules (amount dependent on potency to achieve desired 5mg per capsule). Then use the capsule filling machine to close each gel capsule. Expiration date is expected to be 12-14 months with our air tight, food grade packaging.

Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Section 5 – Proposed Product Packaging and Sample Labels

Review the requirements under 3 AAC 306.520 and 3 AAC 306.565 – 3 AAC 306.570, and identify how the proposed establishment will meet the listed requirements. **Attach a completed copy of this page for <u>each</u> proposed marijuana concentrate or marijuana product.**

Product Name:	Canamo Capsules
Type:	Edible

Packaging Description: Details must include the color(s), size, packaging materials used, total amount of THC, individual serving sizes (if multiple), and other specifics showing compliance with 3 AAC 306.565. Attached photos, drawings, or graphic representations are preferred.	Each package for sale to a consumer will contain 10 pills that each contain 5MG of THC. The ten pills will be placed into a Mylar Bags with the branding name of Canamo (see blue mylar bag above). Mylar bags are resalable bags made from mylar material and used to help with the effects of heat, smell, light, moisture, oxygen, etc. on the products. As shown above, the mylar bag is not opaque and therefore, once a consumer purchases the product, it will need to be placed in a opaque exit bag, that is child resistant and resealable. The exit bags are 12.25” x 9” x 4” in size. See Exhibit A for Photos and Graphic representations.

Sample Labels: Provide sample labels showing how the labeling information required in 3 AAC 306.570 will be set out.	 **Nutrition Facts** Serving Size Servings Per Container Amount Per Serving Calories — Calories from Fat % Daily Value* Total Fat Saturated Fat Trans Fat Cholesterol Sodium Total Carbohydrate Dietary Fiber Sugars Protein Vitamin *Percent Daily Values are based on a 2,000 calorie diet. **INGREDIENTS:** Marijuana (oil, concentrate, or syrup), butter, white sugar, packed brown sugar, eggs, vanilla extract, all-purpose flour, baking soda, hot water, salt, flavor additives (peanut butter, chocolate chip, snickerdoodle). **MANUFACTURED BY:** Raspberry Roots LLC 501 Raspberry Rd. Anchorage, Alaska 99518 License No. 123456 **NET CONTENT:** Ten (10) servings of Five (5) MG THC Totaling 50 MG of THC per Package **LOT #:** (as applicable) **EXPIRATION DATE:** (as applicable) **Retailer's Label** **ALASKA WARNING:** Marijuana has intoxicating effects and may be habit forming and addictive. Section 4 – Proposed Marijuana Concentrates and Marijuana Products

Review the requirements under 3 AAC 306.520 - 3 AAC 306.525 and 3 AAC 306.560, and identify how the proposed establishment will meet the listed requirements. **Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.**

Product Name:	Canamo Shatter
Type:	concentrate

Product Description: Details must include the color, shape, and texture.	Shatter is generally translucent varying from a blonde yellow all the way to dark amber. Shatter gets its name from its resemblance of broken glass with a sticky, glass-like texture.

Ingredients: This box is not applicable to marijuana concentrates	NA
Standard Production Procedure and Detailed Manufacturing Process:	A brief step-by-step process for a closed loop, light hydrocarbon gas extraction will be listed below: Fill solvent tank with Butane/Propane mix; Fill material column with dried cannabis plant material; Review system; make sure all hoses, gaskets, and clamps are working properly; Open solvent tank valve to allow solvents to filter through the material column; Once all solvent has passed through the material the recovery tank valve can be opened. Solvents and cannabis extract will flow into recovery tank; The solvent is then re-collected using passive recovery; The system is then de-pressurized. Recovery tank can now be disassembled and the cannabis extract can be removed. After cannabis extract is removed, certain I.P. manipulation processes take place (aeration, whipping, etc.) that creates the desired structural outcomes; Cannabis extract is then purged of all solvents in a degassing vacuum oven for at least 36 hours. Final step is to congregate the oils for testing, packaging, and selling.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Product Name:	Canamo Kief
Type:	Concentrate

Product Description: Details must include the color, shape, and texture.	The separation of cannabinoid trichomes from the cannabis plant (marijuana buds) produces what we call Kief. Appearance resembles a light green to golden brown powder.

Ingredients: This box is not applicable to marijuana concentrates	NA

Standard Production Procedure and Detailed Manufacturing Process:	Kief is created naturally through the vibration marijuana buds endure while being hand trimmed. Pictures of trays that assist in the collection while trimming are pictured below. The trimmers trim the marijuana buds over these trays so the kief can be filtered from the trim through a micron screen and settle in the bottom tray. There is no expiration date with marijuana concentrates, however, product may alter cannabinoid profile after one year's time. Additional testing will occur if that happens.

Product Name:	Canamo Sugar Wax
Type:	Concentrate

Product Description: Details must include the color, shape, and texture.	"Sugar" is the word used to describe shatter that has begun to resemble the consistency of wet sand while not completely drying out into crumble, therefore, sugar wax is a mix between a shatter and a crumble. It is actually the stage before the product hardens its texture. Sugar Wax is generally lit up with a sugary sparkle that can vary from a blonde yellow to dark amber hue.

Ingredients: This box is not applicable to marijuana concentrates	NA

Standard Production Procedure and Detailed Manufacturing Process:	A brief step-by-step process for a closed loop, light hydrocarbon gas extraction will be listed below: fill solvent tank with Butane/Propane mix; Fill material column with dried cannabis plant material; Review system; make sure all hoses, gaskets, and clamps are working properly;Open solvent tank valve to allow solvents to filter through the material column;Once all solvent has passed through the material the recovery tank valve can be opened. Product Name:	Canamo Budder
Type:	Concentrate

Product Description: Details must include the color, shape, and texture.	Budder get its name from its peanut butter like texture. Its sticky texture comes from its high terpene (fatty in nature) profiles. Budder can range from a bright blonde yellow to tannish brown in color.

Ingredients: This box is not applicable to marijuana concentrates	NA

Standard Production Procedure and Detailed Manufacturing Process:	Rosin technology is a heat extraction method that utilizes a flat heat press mechanism to "press" out the chemical compounds from the cannabis plant. With nearly 5 tons of force with only 120 psi air, Pure Pressure Rosin Press are all manufactured in the USA and provide industry leading safety controls. A brief step-by-step process for a Rosin Technology extraction will be listed below: Heat machine (hot plate) to desired temperature, usually around 200 degrees, via computer dashboard; Set machine to desired PSI, usually around 90 parts per square inch, via computer dashboard;Set machine to desired Time of Pressure, usually around 40 seconds, via computer dashboard; Safely place cannabis plant material on parchment paper and lock it in to machinery slot with provide clips; Use automated buttons to drop the hot plate and provide the heat and pressure. There are many safety features that prevent any extremities and/or other objects from being caught in the press; Parchment paper will guide desired flow of extracted oils and will collected together from gravity; Final step is to congregate the oils for testing, packaging, and selling. NOTE: Pressure, Heat, and Time fluctuate often and are dependent on quality, structure, test results, age, etc. of the starting cannabis material. There is no expiration date with marijuana concentrates, however, product may alter cannabinoid profile after one year's time. Additional testing will occur if that happens.

Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Review the requirements under 3 AAC 306.520 - 3 AAC 306.525 and 3 AAC 306.560, and identify how the proposed establishment will meet the listed requirements. **Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.**

Product Name:	CRUX Vape
Type:	Concentrate - Vapable Oil Cartridge

Product Description: Details must include the color, shape, and texture.	Oil is the softest, most viscous form of extracted cannabis. Usually sticky and runny like typical honey oil. Color ranges from a bright amber to a golden brown. Our Cannabis Oil sold in cartridges to be smoked through vaporizing gadgets. To lighten the viscosity of the oil and allow for vaping mechanisms, oil is cut with certain mediums. Crux vapes will consist of approx. 200 mg of THC (dependent on the individual lot number) per each 0.5 ml cartridge.

Ingredients: This box is not applicable to marijuana concentrates	Marijuana (oil, concentrate or syrup), PEG 200, 300, 400, food grade terpenes (all natural, organic, non-GMO)

Standard Production Procedure and Detailed Manufacturing Process:	Put marijuana (oil or concentrate) into a Pyrex beaker and heat to specified temperature. Once oil has melted down, add PEG blend. Immediately use homogenizer to emulsify the blend. Let oil cool to specified temperature and then add terpenes. Next, use homogenizer to emulsify the final blend. Let the solution cool to specified temperature and then fill the cartridges using a syringe with 0.5 ML each of the finished emulsified solution. There is no expiration date with marijuana concentrates, however, product may alter cannabinoid profile after one year's time. Additional testing will occur if that happens.

Product Name:	Northern Delight Snow Caps
Type:	Edible

Product Description: Details must include the color, shape, and texture.	Northern Delights Snow Caps will be ½" diameter, as well as a ½" in height. They will come in various colors (blue, red, green, orange, yellow, purple, white, pink). The texture of the Snow Caps will be hard with a powdery sugar coating. This product will consist of ten (10) units per package with each Snow Cap containing five (5) mg of THC.

Ingredients: This box is not applicable to marijuana concentrates	Marijuana (oil or concentrate), gum paste, LorAnn hard candy flavoring oil, powdered confectioner's sugar, liquid food coloring.

Standard Production Procedure and Detailed Manufacturing Process:	Evenly mix Marijuana (oil, concentrate or syrup) with gum paste using homogenizer. Next, line pan with powdered confectioner's sugar. Gradually mix the hard candy flavoring into the gum paste. Kneed the oil into the paste. Roll out the dough/paste using a rolling pin, adding powdered confectioner's sugar to prevent the paste from sticking. Then use the ½"cut out to cut the individual hard candies. Sprinkle powdered confectioner's sugar on the cut candies to prevent them from sticking together. Place on new pan and cover loosely with paper. Leave to air dry. Expiration date is expected to be 6-8 months with our air tight, food grade packaging.

Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Product Name:	Cannabis Topical Oil
Type:	Base for topical products - Marijuana Product is consumed by absorptions through skin

Product Description: Details must include the color, shape, and texture.	This is a solid coconut oil infused with cannabis, so it will be a light green in color and smooth in texture. This product will not be sold to the public, but is used as the base of the other topical products. This product is not meant to be sold directly to consumer - it is the base ingredient for the products below that are intended for topical use only and not for consumption via mouth or lungs.

Ingredients: This box is not applicable to marijuana concentrates	Coconut oil, cannabis, emu oil, olive oil, and Sea Buckthorn oil

Standard Production Procedure and Detailed Manufacturing Process:	Cannabis is decarboxylated by heating it in an oven at 220 degrees for one hour and fifteen minutes. It is then added it to the oil mixture and cooked in a counter top cooker such as a crock pot on 130 degrees for 6 hours using an immersion blender every hour to completely blend the cannabis flower into the oil. The cannabis is strained from the oil, which is now sent to the lab for testing and used to make the rest of the products. This oil will be kept in the refrigerator until used.

Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Product Name:	Cannabis Topical Oil
Type:	Base for topical products - Marijuana Product is consumed by absorptions through skin

Packaging Description: Details must include the color(s), size, packaging materials used, total amount of THC, individual serving sizes (if multiple), and other specifics showing compliance with 3 AAC 306.565. Attached photos, drawings, or graphic representations are preferred.	Packaging will consist of a 16 ounce glass resealable jar and will only be sold in wholesale quantity to other licensed product manufactures (up to 16 ounces of product per jar) or will be used internally to make the products below. Each serving size added to a topical product (per serving) will be 5mgs. The total amount of THC per jar will depend on what product he oil will be used in and what other ingredients will be later added to dilute the THC amount down to 5mg per serving and no more than 10 servings per package when selling topical products below to consumer. The company does not intend on whole selling this product, but in the event that it does it will contain packaging and labeling consistent with the state and Muni of Anchorage marijuana regulations.

Sample Labels: Provide sample labels showing how the labeling information required in 3 AAC 306.570 will be set out.

Details and verbiage will be as applicable and unique per Lot number. * testing results for pesticides, filth, THC, CBD, and potency percentage will also be included.*

Section 4 – Proposed Marijuana Concentrates and Marijuana Products

Review the requirements under 3 AAC 306.520 - 3 AAC 306.525 and 3 AAC 306.560, and identify how the proposed establishment will meet the listed requirements. **Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.**

Product Name:	Twisted Tundra Canna Ease
Type:	MJ Product - Topical Salve

Product Description: Details must include the color, shape, and texture.	This topical salve is an oil based product that has a smooth texture and a natural light green color. This salve will be packaged in containers with screw on lids.

Ingredients: This box is not applicable to marijuana concentrates	cannabis oil (the product immediately above), Arnica, calendula petals, clove, nutmeg, comfrey, turmeric, ginger, cayenne pepper, black pepper, shea butter, coco butter, proprietary blend of essential oils, vitamin E, bees wax

Standard Production Procedure and Detailed Manufacturing Process:	The desired amount of the base cannabis oil is melted gently in a double boiler or microwave. The same is done separately for the herbal oil. Both oils are added together and then the desired amount of shea butter, coco butter, and bees wax is gently melted and added to the cannabis mixture. Once the oil mixture is cooled to 70 degrees, the proprietary blend of essential oils and vitamin E is added, mixed well, and poured into containers. It is cooled until solid.

Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.	 The label will have the logo on it along with the ingredients, the warnings, and the testing information.

Section 4 – Proposed Marijuana Concentrates and Marijuana Products

Review the requirements under 3 AAC 306.520 - 3 AAC 306.525 and 3 AAC 306.560, and identify how the proposed establishment will meet the listed requirements. **Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.**

Product Name:	Canna Moose Turds
Type:	Marijuana Product

Product Description: Details must include the color, shape, and texture.	Canna Moose Turds will be a taffy like edible consisting of 5MG of THC in each piece. Dark brown in color with a smooth exterior and about 1 inch in length and ½ inch width.

Ingredients: This box is not applicable to marijuana concentrates	Marijuana (oil or concentrate), granulated sugar, light corn syrup, butter, cocoa, sweetened condensed skim milk, water, vanilla extract, salt.

Standard Production Procedure and Detailed Manufacturing Process:	Melt butter and mix in all ingredients including marijuana and mix thoroughly using a homogenizer mixer. Set mixture over medium/low heat until candy reaches 250-degree F. When the candy reaches 250 degrees F, pour it onto a silicone, non-stick pad. Allow it to cool for 7 to 10 minutes. As the candy cools enough to be handled, fold the edges over onto the center. Eventually you will be able to pick up the ball of candy, and, with buttered hands, twist and pull the candy for a good 10 minutes or until it begins to turn lighter in color. Let the candy rest for an hour or so, then pull and twist it again for 5 minutes. This process will work air into the candy. When the candy has become an even lighter shade of brown, divide it into three or four chunks and roll those into ropes that are about 1/2-inch thick. Cut into 1-inch pieces (the suspected 5MG of THC size). Wrap these pieces in wax paper that has been cut into 2x3-inch rectangles, and twist the ends to seal.

Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.	**Packaging Description:**

Product Name:	Canna Moose Turds
Type:	Marijuana Product

Packaging Description: Details must include the color(s), size, packaging materials used, total amount of THC, individual serving sizes (if multiple), and other specifics showing compliance with 3 AAC 306.565. Attached photos, drawings, or graphic representations are preferred.	Each 5MG THC unit will be wrapped in a piece of parchment paper. will be placed in Parchment paper. Parchment paper is cellulose-based paper that is used as a disposable non-stick surface and to hold the units in place. Each parchment paper will be 3" by 3". Second, the parchment paper with Moose Turds will go inside an opaque burlap sack with a drawstring to further prevent access. The burlap sack will be a rectangular shaped. It will be made of burlap exterior with the Moose Turds logo displayed on it. The Dimensions of the packaging are 3" x 5". The tin packages have the ability to be tamper proof with a printed descriptive label wrapped around the tin (as shown below). Finally, all products will be placed in an exit bag before leaving licensed facility retail area. The exit bag is opaque, child resistant, and resalable bags. The exit bags are 12.25" x 9" x 4" in size. *See attached picture of packaging steps and packaging.*

Section 6 – Waste Disposal Plan

Review the requirements under 3 AAC 306.520, and identify how the proposed premises will meet the listed requirements.

Describe the marijuana product manufacturing facility's plan for disposal of any expired or outdated marijuana or marijuana product that is not sold or transferred to another licensed marijuana establishment:

Raspberry Roots disposal plan will include post CO2 extracted material, wastewater generated during manufacturing, and concentrates that fail to meet quality standards. The method of disposal to be used will be, render the products unusable before disposal, and grind and mix 50% marijuana waste with 50% non-marijuana waste.

Compostable solid wastes to be used; food waste or vegetable-based oils. Marijuana waste will be stored away from all other products in a locked container inside the facility, and will be rendered unusable prior to leaving the facility for disposal. Management will maintain a log on the status of all marijuana waste, tracking the type of waste, the date of the disposal, the date it was rendered unusable, and the date that it was picked up by the disposal company. All marijuana labeled for disposal will be stored in a secured container, separated from all other products and materials, until it can be rendered usable. The waste will be collected and disposed of once a week. To ensure tracking and that no diversion is to occur, a manager will meet with the waste truck driver to collect and log a signature and the name of the waste truck driver, the date, time, and the type of marijuana waste that is being collected. This logged information will be available to AMCO at any time upon request, and securely stored.
