Just wanted to state my support for increasing the state THC limit on cannabis edibles. Compared to other states, the current 50 mg limit is extremely low and is long overdue for an increase.

From: John S Nemeth
To: CED AMCO REGS (CED sponsored)
Subject: Public Comment on 3 AAC 306 of the Alaska Administrative Code dealing with THC Content for Edibles
Date: Friday, March 5, 2021 4:03:32 PM

Dear MCB Board and AMCO Staff,

I write today representing my company, Top Hat Concentrates (product manufacturing) in full **support** of the proposal to increase the edible THC content limit from 5mg/50mg to 10mg/100mg respectively.

Making this change would bring Alaska's market in line with national regulatory standards and acceptable societal norms. It could also serve to significantly decrease the cost to produce, therefore acting as an economic multiplier.

Under current rules, if a person seeks 100mg of THC they simply buy two packages. Under this change, they would buy one package, saving themselves money (economic multiplier #1), and the manufacturer is going to have spent less in additional ingredients, packaging and labor, to get the customer what they ultimately are getting anyways (economic multiplier #2).

Simply put, this saves money for the consumer, and saves money for the manufacturer, a double win.

If there is a concern about overuse, public health or public safety outcomes, I would remind this board that consumers can get ingestible THC on the legal market in way higher doses than 50mg right now, just not in a regulated edible. This dynamic forces those who seek higher doses to the Black Market, where their product is not tested or taxed, and that market place is the real public health and safety concern.

For the reasons outlined above, I want to reiterate my support of this regulation being adopted as written.

Thank you,

John

Subject: 100mg Edible Serving increase
Date: Thursday, March 4, 2021 7:09:06 PM

As someone who has worked in the cannabis industry one of the main complaints my customers have is the edible serving size being too low and prices being too high. I believe that increasing the edibles dosage to 10mg would satisfy both the industry and customers alike. Many other states have much higher MG limits and lead by examples that the people want a better dosage for a better price with more variety.

Thank you!

Subject: Public Comment on 3 AAC 306 - PROPOSED CHANGES ON THC CONTENT FOR EDIBLES

Dear Honorable Marijuana Control Board Members:

The Marijuana Control Board proposes to adopt regulation changes in 3 AAC.306.005(a)(1) and 3 AAC.306.300(a)(2)(A) as well as 3 AAC 306.560 and 3 AAC 306.645(b)(1)(B)(iii)-3 AAC 306.645(b)(1)(C)(i).

We support this regulation change as written.

We believe that a THC content increase in edibles will have two main positive effects for the legal market, including: 1) decreasing production costs and retail pricing of edibles, and 2) increasing the utility of legal market edibles to consumers who seek higher doses of THC and other cannabinoids.

1) Decrease production costs and retail pricing:
Consumers who purchase edibles in the legal market are effectively purchasing milligrams of THC. Manufacturers will be able to provide a better price point per milligrams of THC if there is an increase in dose and package limits. This is because there will be a decrease in production cost on the "per milligram of THC" basis given the input costs beyond the increase in THC input (non-cannabis ingredients, labor, packaging, etc.) are about the same regardless of THC. Manufacturers will then be able to pass this savings on to the retailer, who can pass on the savings to the consumer. This decrease in price also dovetails with an increase in utility to consumers.

2) Increase in utility to consumers:
Many consumers, especially those who use cannabis for medical purposes, seek high doses of THC and other cannabinoids to achieve the desired effect. For these consumers, the THC limits of 5mg/serving and 50mg/package makes purchasing legal market edibles impractical. This is because, in order to achieve the desired dose, these consumers would have to consume an impractical amount of edibles that are sold at a high price point. Regular consumers, including medical users, generally seek a higher dose than 5mg, often orders of magnitude higher (e.g. 50-200mg dose). Rather than eating or drinking impractical amounts of the physical edible purchased at a high price point, these consumers are forced to either make their own edibles or purchase higher dosed edibles from the black market. By raising the dose and package limits, the legal industry can provide for these consumers with a practical option which would allow the legal market to be more competitive with the black-market edibles sales.

The AMIA would like to provide a simple comparison summary of what the limits are in other legalized states to illustrate that bringing Alaska to the 10/100mg level would not be doing anything more than bringing us in line with the average/most commonly acceptable potency limit nationwide.

These states are ranked lowest limit to highest limit:

States with Adult &/or Medical Use Regulated Cannabis Programs

State	Single Serving Limit	Package Limit
Alaska	5 mg	50 mg
Vermont	5 mg	50 mg
Oregon (edibles)	5 mg	50 mg
Oregon (capsules)	10 mg	100 mg
Massachusetts	5 mg	100 mg
Colorado	10 mg	100 mg
Washington	10 mg	100 mg
Michigan	10 mg	100 mg
California	10 mg	100 mg
Maine	10 mg	100 mg
Arizona	10 mg	100 mg
Nevada	10 mg	100 mg
Illinois	n/a	500 mg
Montana	n/a	800 mg

In closing we hope that you will ensure the sustainability of our Alaskan Industry as well as answer the consumers' needs for an increase in cannabis edibles and adopt this regulation change.

Thank you for your time and service.

Respectfully,

Alaska Marijuana Industry Association
Board of Directors & Governance Committee

Subject: THC Content for Edibles Public Comment

Dear Marijuana Control Board Members,

I support changing 3 AAC 306 to allow Marijuana edibles to contain 10mg THC per serving and 100mg per package. As you saw from Jane Sawyer's report, these limits are used in numerous other states. Approving this increase would have benefits from an Economic, Environmental, and Policy perspective.

The people of Alaska are, in effect, purchasing milligrams of THC when they purchase a marijuana edible. No Alaskan would buy a marijuana edible product at its current price point if there were no THC within that product. The economics surrounding edibles would improve under this proposed change due to reduced labor cost, testing cost, and packaging cost per milligram of THC. A larger THC milligram limit would produce higher efficiencies in the labor cost to milligram ratio. This would improve both the pricing for consumers and the margins for manufacturers and retailers. For example, a batch of 100 cookies that contain 1000 mg of THC takes the same labor as 100 cookies that contain 500 mg THC. Next, testing is a large cost in edible production due to the 11 tests needing to be conducted for each batch of edibles. Increasing the potency limits would allow the manufacturer to spread out the testing costs per batch over more milligrams of THC, therefore reducing the testing cost per milligram. Finally, the packaging cost per milligram would be reduced. These economic upsides could aid Alaskan owned businesses, and ultimately provide savings and convenience for the Alaskan consumers.

The environmental impact of the marijuana industry due to the ASTM requirements is no secret. By increasing the potency limit on edibles, there could be a reduction in plastic and other solid packaging waste by nearly two-fold. For example, a customer who normally purchases 4 packs of cookies could now come in and buy the same amount of THC in two packages. Halving the packaging waste of even a portion of the marijuana industry would be a great improvement. This is especially pertinent considering recycling options are limited across Alaska, and there are many isolated Alaskan communities facing serious challenges with waste disposal.

Lastly, marijuana users in the state desire more than 5 mg in a serving, and it is driving those individuals to the black market. A common complaint from consumers at retail stores is the low amount of THC in edibles. For many consumers, especially those who dose with cannabis daily for medical purposes, the low dose of THC per serving is insufficient to achieve the desired effect without having to consume a large quantity of edible product. For example, a consumer that requires a 100 mg dose to achieve the desired effect, a dose that is not unusual for medical patients, would have to eat twenty 5mg cookies from the legal market. This is obviously not practical, not only because it is prohibitively expensive, but also due to the sheer bulk of edible that needs to be consumed. This issue leads consumers to search elsewhere for higher dosed edibles that are not tested, regulated, or taxed. We should be continually trying to make the regulated market more competitive against the black market – raising the edibles dose limit achieves this goal.

. When weighing the risks you may perceive as being linked to this change, please take into account the economic, environmental, and policy impact that this change could produce.

Sincerely,

C. Barret Goodale

Subject: We support the increase in Edibles Limit

Dear Marijuana Control Board,

Thank you for considering an increase in the edibles limit in Alaska. As a manufacturer of cannabis products we would welcome the change.

We all that know the legal cannabis industry is relatively young in Alaska, other states, and around the world. The illegal status of cannabis has made the number of scientific studies regarding pharmacodynamics hard to find but they do exist. Science is showing that 10mg servings to the informed consumer to be increasingly harmless.

In June 2020 there was a scientific study published in the journal *Drug and Alcohol Dependence* that studied the dose effects of oral cannabis ingestion in healthy adults who **infrequently** use cannabis. Pharmacodynamics were assessed for the edibles at 0, 10, 25, and 50 mg's of THC. 10 mg's of THC produced discriminable subjective effects but did not alter cognitive or psychomotor performance.

Every person's experience with edibles and dosing can be different. We should always allow the consumer to decide, therefore we feel 5 mg doses are as important as 10mg doses. It encourages a freedom of choice. Liquor stores do not put a limit on how many bottles of alcohol one can purchase. The consumer has the freedom to choose.

Please support the increase to 10mg THC per serving/100mg THC per package. It is considered the standard dose in the US.

Thank you for your time.

Sincerely,
Lisa Coates

I am wholly in support of the cannabis edible dose limits being moved to a maximum of 10mg per dose and 100mg per package. I also view this as just a step toward the eventual complete removal of all imposed dosing and sales limits or restrictions in the state. I feel that as long as a product's dose is accurately reflected on the packaging, no maximum dosing, packaging, or sales limits should exist.

Subject: Edible Regulation for Marijuana Control Board
Date: Friday, March 5, 2021 11:10:56 AM

Hello,
I'm writing in response to public comment to the proposed changes to THC content for edibles in the state of Alaska.

I have currently been employed in the cannabis industry for 3 1/2 years, and I believe that our industry is ready to see a 10 mg serving size, as well as a 100 mg package limit across the state.

I believe in using cannabis for its many benefits, while also protecting my health as much as possible. To me, this means finding alternative ways to consume cannabis, in order to protect my lungs from the affects of traditional smoking.

Since our current regulation limits edible milligrams to half of the serving sizes that are seen in other states, I feel that this limits our consumer options. By raising the serving size to 10 mg a serving / 100 mg a package, we would see an increased interest in edible manufacturing businesses, leading to a larger edible market.

Thank you for your consideration,
Logann

To whom it may concern,
I am writing in favor for the updated regulations to have edibles be able to have 10mg serving sizes, with 100mg per a container. I know other states have no issues with these doses, and I'm sure it will benefit the Alaskan edibles market.
I also would like to voice support for allowing manufacturers of edibles to update their previous product packaging to any new regulations without having to submit it as a new product, but rather just with a letter of intent for a previous product to be signed by the director, much like adding a clone in a cultivation.
Thank you for your consideration.

Subject: THC Potency of Edibles public Comment

To Whom it May Concern;

The argument FOR 10MG edibles is strong from our position. Not a day goes by that a customer does not ask (or comment on why) edibles in Alaska are "weaker". Customers often ask for stronger options and are often frustrated to find none. Indeed, high potency edibles are probably our number one most requested item. For our employees it would mean being better able to guide customers in their purchases, allowing for a better industry experience for clientele.

From a storefront perspective, stronger edibles not only would mean stronger sales, but it would also mean being able to meet the needs of our customer base more thoroughly. A higher potency edible means better sales for Stores, which means better sales for Manufacturers and Growers, which in turn means higher tax revenue for the state of Alaska. Simply put, in a time when our state is squeezing the value from every dollar and resource, marijuana edibles have been overlooked too long.

In closing, we at Highbush Buds, FULLY SUPPORT and ENDORSE the raising of Edible Dosages from 5MG to 10MG.

Subject: In favor of increasing edible limits
Date: Friday, March 5, 2021 4:25:12 PM

Dear Alaska Marijuana Control Board:

I am writing in support of increasing the marijuana edible limits from 5 milligrams to 10 milligrams and total packaging from 50 milligrams to 100 milligrams. Almost every other legalized state has been successfully using the 10 milligram limit for years without incident. Although it is an increase for us, it is most certainly the standard in other areas of the country.

Marijuana edibles are considered by many to be the safest method of consuming cannabis yet because of packaging and testing regulations, cost the most to create and produce so much additional packaging. By doubling the limits you are voting to half the amount of additional packaging material used which is certainly a step in a positive direction.

By increasing the limits you are also helping to keep consumers buying on the legal market. The legal market means the product is created in a DEC certified kitchen with a certified food manager on site along with food handler certified/marijuana handler card carrying professionals. This crew is then only working with batches of Alaskan legally tested seed to sale marijuana. This generates a safer and regulated product and revenue to multiple state agencies on top of the usual taxes. This also means the products created have passed testing for both proper dosage and homogeneity. Illegally produced edibles obviously have no oversight for consumer safety and produce no state revenue.

As a reminder, with today's regulations you can buy more than 1000 pieces of legal edibles per day (5600mg). In essence, we aren't asking to "change"or "up" these limits, we're simply asking for reorganization of how we are allowed to buy and sell them. Increasing the amounts per package will have positive effects on many levels and the conversation about increasing these limits to 10mg per piece has been brought up since the initial regulations were put into effect.

Thank you for the time and opportunity for public comment,

Re: Comment on Regulation Change to 3 AAC 306; THC Limits on Edibles

Dear Honorable Members of the Alaska Marijuana Control Board:

Please accept this letter in support of the proposed regulation changes to 3 AAC 306.005, .300, .560, and .645 dealing with the THC limits on marijuana edible products.

Currently, marijuana edible products are limited to 5 milligrams per serving, with no more than 10 servings per container, for a total of 50 milligrams per package. The proposed regulations would double that limit, increasing the maximum serving size to 10 milligrams per serving, for a total of 100 milligrams per package.

The vast majority of edible marijuana products for sale in Alaskan retail stores are 5 milligrams per serving, with a majority of packages containing 10 servings.

Edibles are vastly more expensive than other commonly purchased forms of marijuana, even when compared to other labor-intensive marijuana products.

Most other recreational marijuana states have either set no edible potency limit, or cap potency at 10mg per serving. Colorado, Washington, Michigan, California, Maine, Arizona, Nevada all set their recreational single serving limits at 10 milligrams. In order for Alaska to compete with other states' markets and attract canna-tourism, we need to expand our regulations on marijuana edibles.

The new proposed regulations will not negatively affect public health or safety, as this measure simply gives recreational consumers more options when consuming marijuana and will not lead to a substantial increase in over-consumption. Most marijuana consumers know their limits, retail store employees are trained to ask customers about their tolerance levels, day to day usage etc. Consumers should have the option to purchase products at an affordable price and should also be given the benefit of the doubt that they are responsible enough to make decisions on the amount of marijuana to consume.

JDW
COUNSEL
ALIGNED FOR EXCELLENCE

Jana D. Weltzin

jana@jdwcounsel.com

In summary, this proposed change will allow marijuana product manufacturing license holders to produce more cost effective products, which will not only benefit retailers but will pass the savings on to Alaskan residents and will encourage tourism. Allowing a 10 milligram serving size is not a radical step, it merely brings Alaska in line with other recreational marijuana states.

Thank you for your consideration and thank you for your continued hard work furthering the growth and sustainability of our thriving marijuana industry.

Truly and Sincerely Yours,

Jana D. Weltzin, *Esq.*

Subject: THC limit for edibles comment

Hello,

Oregon allows for single serving edibles of up to 50 mg THC. Alaska could do the same and simply require specialty molds or indelible marking on edibles that are more than 10 mg THC to ensure the consumer is aware of the higher potency. This would be a welcome alternative to many consumers who smoke to achieve their desired effect.

Cannacaps should also be allowed to be sold in packages of up to 300 mg THC, with individual capsules of up to 50 mg. Again, simply require branded or specially printed capsules for any product more than 10 mg THC per serving. While Alaska does not regulate medical marijuana, those who use cannabis as medicine shop at recreational stores.

Please also consider allowing single bottle drink products of up to 150 mg THC per 750 ml. This is in line with current drink products that contain 50 mg/8oz. This would allow manufacturers to create a specialty product in a bottle size that is commonly used in the alcohol industry.

Thank you for you consideration.

Jennifer

Subject: Edibles THC increase

I would like to submit my opinion about increasing the amount of THC in commercial edibles.

As someone using cannabis edibles for chronic pain conditions, I can assure you that 5mg is too low for most of us to find relief from pain. Increasing the amount in a dose to 10mg is far more effective, but also more cost effective when in a limited budget.

At this time, I and many others generally have to make my own edibles for personal consumption, to save money and increase effectiveness. Unfortunately, this leads to not knowing how strong each batch is. I would much rather be able to purchase tested produced to assure what is in the product.

As someone from Colorado, I have found buying 10mg doses allows me to adjust the dose down as needed. But the expense is less than what we pay here for 5mg.

With medical cannabis users often needing 50mg or higher to combat pain and side effects of treatments like chemotherapy, 10mg edibles are needed in our community.

As it is, cannabis to support medical needs is far more expensive than opiates are, but far less damaging to our society as a whole. Please allow the industry to increase THC doses available for sale.

Thank you,
Lara Imler

Subject: NOTICE OF PROPOSED CHANGES ON THC CONTENT FOR EDIBLES IN THE REGULATIONS OF THE MARIJUANA CONTROL BOARD

Hi my name is Sinia Maile I live in Kodiak Alaska and I approve of the regulation changes to 3 AAC 306 of the Alaska Administrative Code, dealing with THC content for edibles, including the following:
3 AAC 306.005(a)(1) and 3 AAC 306.300(a)(2)(A) are amended to update the range of applicable provisions
3 AAC 306.560 is amended to allow for a single serving to contain not more than 10 milligrams of THC, and for a single packaged unit to contain not more than 100 milligrams of THC. The packaged unit still may not exceed 10 servings, each serving may not exceed a specific range of THC content.
3 AAC 306.645(b)(1)(B)(iii) is amended to update the example provided of the 20 percent variance allowed for THC content in a single serving.
3 AAC 306.645(b)(1)(C)(i) is changed from 60 milligrams to 120 milligrams based on the 20 percent variance.

Subject: Legal Level of THC for Edibles

Dear sir:

Please allow for the legal limit in edibles to be raised to 10/100 milligrams. I would rather not smoke if I had viable edibles. Current the THC is too low and the cost way too high to consider edibles. I only smoke at night before going to bed to relax. I would prefer a non-smoking option.

Sincerely,

Mark T Wnetrzak

Subject: Comment about Proposed Changes to THC Content of Edibles

Dear AMCO Board,

I am in favor of increasing the THC Content in edibles to 10mg per serving and 100mg per package. In addition to being the standard dosage for cannabis edibles in other legal states, increasing the limits will eliminate unnecessary pressure on cannabis businesses, reduce the amount of waste and packaging finding its way into our landfills, and allow consumers to ingest less calories, sugar, etc. while maintaining the desired effect. Consumers that use edibles on a regular basis can easily ingest up to 200+ mg's regularly and currently that means they would have to consume 20 individual servings, and all the packaging associated with that ends up in the ground or on the side of our highways. Anything that can reduce that particular strain on our industry is a welcome relief.

Thank you for your time,

Jeff Devon

Dear Board Members,

I fully support the increase in dosages of edibles, in fact I believe there shouldn't be such regulations in place in the first place. The alcohol industry is more than welcome to sell 90 proof, why can't cannabis users dictate what is "too much" for ourselves?

Sincerely,
Bryson Rudd

As the victim of a violent crime and someone who suffers from chronic pain and who likes taking the edibles vs opioids, I support the change and I also think that the range should be open for manufacturers to be incompliant as long as they don't go over the 120mg per bag and the 10mg per serving to mean that a serving that tested in below 10mg would still be considered to be in compliance with the rules it would only have to be listed on the final labeling as such. you know with the cost of testing and the way of the economy I could use this break and would greatly appreciate it also my customers would also because some of my customers don't like the high doses they like them milder so I say give the customer what they want.
Thank you

Subject: THC limits in edibles- regulatory change

1-15-21

To whom it may concern,

A regulatory change in regards to the THC mg limit of edibles in the Alaska market, from 5mg to 10mg, is very reasonable. I believe we should have started with 10mg, but am happy to see things progressing in that direction.

In 4 years of sales, there have been very few, if any, circumstances of concern regarding edible potency. The ability for the consumer to know the potency and make a choice of how many servings they wish to consume based on that information is more than reasonable. We don't see these types of limits on alcohol, nor should we see them in this case. Adults should be able to make these choices for themselves.

I strongly support the edible potency limit be changed from 5mg to the proposed 10mg.

Thank you,

Dollynda Phelps

Subject: Proposed Edible Regs

Hello,

I am a manager at a dispensary on the Kenai Peninsula. I support upping the single serving mg to 10mg from 5mg.
It seems silly to me that I can walk into a liquor store and buy an unlimited amount of 90 proof alcohol but I can't buy
A reasonable amount of edibles at my local dispensary. Almost every other legal state is at least at the 10mg limit for edibles
And I see no reason Alaska is trailing behind in that regard.

Thank You for your time,

Subject: Public comment on Edible Potency
Date: Friday, March 5, 2021 1:01:35 PM

To who is may concern,

The Marijuana Control Board proposes to adopt regulation changes in 3 AAC.306.005(a)(1) and 3 AAC.306.300(a)(2)(A) as well as 3 AAC 306.560 and 3 AAC 306.645(b)(1)(B)(iii)-3 AAC 306.645(b)(1)(C)(i). I support this regulation change as written.

As an Alaskan resident and high level manager of a longstanding cannabis company, I believe that the current 5mg THC content in edibles should be increased a 10mg serving per unit. This change to the 10mg per serving/100mg level for packaging would bring us in line with the average/most commonly acceptable potency limit nationwide; 8 out of 12 states have a THC limit of 10mg per serving. I believe the positive
effects of this change would:

1. Decrease production costs for producing edibles which would reduce overall costs to the manufacturer, passing the savings onto the customer.

2. Increase utility of products to consumers. Many customers need to consume an inordinate amount of physical edible (in many cases eating impractical amounts of sugar and other delivery products) to reach the desired effect. This manner of delivery is costly, and in many cases counterproductive to the purpose of using cannabis.

Enlighten Alaska has been operating for four years in the retail market in Anchorage. As our customers learn more about ingesting cannabis through edibles, we have received more requests for at least a 5mg increase to the current regulation. Interestingly, most of those individuals are seniors who are discovering a more benign form of relief from the plant. I appreciate all the work that AMCO provides to the industry.

Respectfully,

Jonathan Weseman

Hello Amco Board,

I am writing to express my support for increasing the amount of THC in Alaskan commercial edibles to beyond 5mg.
10 mg is a somewhat more reasonable dosage & it's long time this limited was adjusted.

Kindly, please adopt the new proposed regulation changes below:

- 3 AAC 306.005(a)(1) and 3 AAC 306.300(a)(2)(A) are amended to update the range of applicable provisions
- 3 AAC 306.560 is amended to allow for a single serving to contain not more than 10 milligrams of THC, and for a single packaged unit to contain not more than 100 milligrams of THC. The packaged unit still may not exceed 10 servings, each serving may not exceed a specific range of THC content.
- 3 AAC 306.645(b)(1)(B)(iii) is amended to update the example provided of the 20 percent variance allowed for THC content in a single serving.
- 3 AAC 306.645(b)(1)(C)(i) is changed from 60 milligrams to 120 milligrams based on the 20 percent variance.

Thank you,
Rachel Ramsey

Subject: Regarding edible dosage
Date: Thursday, March 4, 2021 6:55:05 PM

Hello there, to whom it may concern,

I would like to show support for upping the limit on edible dosages in Alaska. In my opinion, higher doses would take more interest away from unregulated, illegal markets where health and safety regulations are not present. The high price to actually feel something from legal edibles is a barrier in the industry that discourages folks from investing in edibles, instead opting for oils to make at home edibles, which is fine, but not everyone has a cannabis-friendly kitchen to work in.

Thank you for allowing my input on this matter.

Have a splendid day,
Brittany

Subject: Increasing Edible Amount

To whom It may concern:

Hello my name is Shawna Knipe. I've been working in the industry since 2017. I recently read an article about AMCO doubling the milligram amount on edibles and wanted to submit my input/opinion. I wholeheartedly agree with this. I feel like the limits we have now are not necessary AT ALL. The limits hinder my and my fellow butdenders from truly helping someone that may need more of a dosage (but is also something cost effective). I feel like doubling the limits is a step in the right direction. All though I believe there should be NO LIMIT at all. I've traveled to several other places where they do not have limits like these and their products by far surpass the potential we could have in Alaska. I feel like with the increase it would also increase the sales and earning potential for local shops and the state. I also feel like it would drop the pricing quite a bit, potentially helping more people in the long run. Thank you for taking the time to read my opinion/input.

Sincerely Shawna Knipe

Subject: THC Content for Edibles Public Comment
Date: Friday, March 5, 2021 3:15:38 PM

Greetings Board Members,

I am writing to you today to implore you to adopt the proposed changes to 3 AAC 306 to allow Marijuana edibles to contain 10mg THC per serving and 100mg per package.

1) Marijuana edibles of this dosage are safe. Alaska's experience with legal, edible cannabis products has shown us that accidental overdose of THC is exceedingly rare. The fear of children becoming intoxicated or harmed by edibles simply has not occured. Alaska has not seen a statistically significant increase in hospitalizations or drugged driving deaths.

2) Marijuana edibles consumers desire higher doses than 50mg per package. Most consumers must purchase multiple packages to achieve their desired dose of 100 - 300 mg of THC. Manufacturers have fixed costs for ingredients and packaging and thus must charge consumers higher prices per milligram for multiple packages. This creates financial incentives for consumers to purchase from the black market.

3) Exceedingly low limits create unnecessary waste. The marijuana industry produces a great deal of plastic waste due to strict child safety requirements. More waste results in greater costs to both society and the environment.

Thank you for taking the time to read my comment today.

All the best,

B. Emmett

March 5, 2021

Via email to: amco.regs@alaska.gov

From: Jane Stinson, owner/founder of Enlighten Alaska

Subject: Public Comment on 3 AAC 306 - PROPOSED CHANGES ON THC CONTENT FOR EDIBLES

Dear Honorable Marijuana Control Board Member

The Marijuana Control Board proposes to adopt regulation changes in 3 AAC.306.005(a)(1) and 3 AAC.306.300(a)(2)(A) as well as 3 AAC 306.560 and 3 AAC 306.645(b)(1)(B)(iii)-3 AAC 306.645(b)(1)(C)(i).

We support this regulation change as written.

We, the owners of Enlighten Alaska, believe that the current 5mg THC content in edibles should be increased a 10mg serving per unit. This change to the 10mg per serving/100mg level for packaging would bring us in line with the average/most commonly acceptable potency limit nationwide; 8 out of 12 states have a THC limit of 10mg per serving. We believe the positive effects of this change would:

1. **Decrease** production costs for producing edibles which would reduce overall costs to the manufacturer, passing the savings onto the customer, and
2. **Increase** utility of products to consumers. Many customers need to consume an inordinate amount of physical edible (in many cases eating impractical amounts of sugar and other delivery products) to reach the desired effect. This manner of delivery is costly, and in many cases counterproductive to the purpose of using cannabis.

Enlighten Alaska has been operating for four years in the retail market in Anchorage. As our customers learn more about ingesting cannabis through edibles, we have received more requests for at least a 5mg increase to the current regulation. Interestingly, most of those individuals are seniors who are discovering a more benign form of relief from the plant.

We appreciate all the work that AMCO provides to the industry.

Subject: Thc level increase in edibles
Date: Friday, March 5, 2021 11:22:27 AM

My name is Chism Leimbach. I'm am an owner at Top Shelf Herbs of Alaska. And I believe that the state thc level for edibles should be be reexamined. I believe the max should be 1000 MG per package. Simply for the fact of the Cost. Customers come in all the time for edibles. Most are to relieve pain or Increase appetite, Etc. Multiple reasons. Another reason is alot of folks use cannabis for medical reasons, including used as a cancer aid in some cases. Folks who do this are using things like Rso up to 1000mg a day to deal with their issue. In this case rso can be packaged and sold as a concentrate that is widely used as an edible around the world. And it's aloud to be sold at 1000 MG. Some consumers use edibles as an alternative to inhalation and or rso. If rso can be sold at 1000mg then the rest of the edibles should be the same. California does gummy bears, skittles, snickers bars, gushers candy, etc. With a thc levels ranging 300 MG -1000 MG per package. That would be less money the consumer would have to pay compared to currently. At the current thc level of 50 MG per package is costing 10-20 times the amount to get the same thc levels in comparison. Costing more to the people that may need it most to cope and or aid in the daily lives. Higher thc levels would not only save the consumer money. But would also give them more piece of mind. So my vote would be to raise thc level to 1000 MG per package. Thank you for your time.
Chism Leimbach

Comments on: NOTICE OF PROPOSED CHANGES ON THC CONTENT FOR EDIBLES IN THE REGULATIONS OF THE MARIJUANA CONTROL BOARD

Submitted By	Comment
3/5/2021 3:15:13 PM Joe Byrnes joe_byrnes@outlook.com Anchorage, AK, US **Anonymous User**	March 5, 2021 Glen Klinkhart Alcohol and Marijuana Control Office 550 W. 7th Avenue, Suite 1600 Anchorage AK 99501 amco.regs@alaska.gov RE: Comments on proposed changes in the THC Content for Edibles in the Regulations of the Marijuana Control Board Thank you for the opportunity to provide comments on the proposed regulation changes regarding raising the THC content for edibles. I remain deeply concerned about the proposal to allowed THC content in a single serving of an edible product from 5 to 10 mg and for a package from 50 to 100 mg of THC total for the following different reasons: 1. Concerns about health. As relayed by the Anchorage Health Department, edible products are the marijuana products most responsible for increases in marijuana-related poison control calls. Edible products, because of their concentrated dosages, are products most commonly associated with neurotoxicity from acute exposure. Furthermore, edible products tend to be more attractive for youth consumption, particularly due to increasingly negative attitudes toward smoking in general. Positive attitudes toward marijuana usage among youth in Colorado continue to trend upward following legalization in that state. If the resulting regulation change causes marijuana edible prices to decrease, then I am further concerned about possibly increasing youth use. The cost of cigarettes tends to be inversely correlated with a reduction in youth cigarette use. I suspect a similar effect occurs with marijuana use among youth. 2. Concerns about public safety. The Anchorage Police Department has also raised concerns about the impact on public safety since marijuana is the second-most detected substance in intoxicated drivers. In recent testimony, APD said that about 30% of drivers involved in traffic fatalities or serious collisions tested positive for THC in their systems. While marijuana proponents point out that alcohol tends to be a more dangerous substance, what we have seen in the years since legalization is many users of marijuana also use alcohol at the same time. Increasing the concentration of THC in edibles, which tend to have a delayed intoxicating effect, is unlikely to have a positive impact on public safety. 3. Impacts on local tax revenues. Local municipalities have benefited from tax revenues generated from marijuana purchases. I do not feel the board has adequately considered the economic effects that changing THC content in edibles will have on local tax revenues. If patrons are buying more THC for a lower price, sales tax revenues could be negatively impacted. Furthermore, like taxes on alcohol and cigarettes, targeted taxes on substances like marijuana are in part intended to offset increased local costs to government services associated with the use of these products. If there is an increased public safety risk from higher concentrated THC edible products, the government costs associated with that increased risk would not equitably passed onto the citizens that a responsible for increasing that risk. I urge the board to reconsider this proposal in light of these concerns and not move forward with increasing the allowable THC content levels in edible products.
3/5/2021 11:14:42 AM Portland, OR, US **Anonymous User**	I would love to see the edible dosage raised to 100mgs/10mgs for myself and other cannabis users.
3/5/2021 7:57:51 AM Wasilla, AK, US **Anonymous User**	I support raising the percentage for edibles. At present, the low limit does not allow for effects to take place for most cannabis users. This is a disadvantage to the consumer, they have to consume a lot of sugar and edible material, rather than gaining the therapeutic effects.
3/4/2021 7:02:25 PM Tahachee Appodaca Appodacatahachee@gmail.com Wasilla, AK, US **Anonymous User**	100 mg serving is the national standard I see no negatives in increasing Alaska's as well. Legal age citizens can purchase as much alcohol as they wish without handholding I think this Is a step in the right direction. Plus cannabis is far less damaging to the community and contributes greatly to the economy.
3/4/2021 6:54:48 PM Brenna Dinkel brenna.dinkel@Gmail.com Wasilla, AK, US **Anonymous User**	I support changing regulations for edible dosage from 5 mg THC and 50mg per package to 10 milligrams THC per serving and 100 per package, 5mg servings are to low for the average consumer and it makes the products over priced and not worth the hassle which I believe is discriminatory against consumers looking for an option that doesn't involve smoking or vaping.
3/4/2021 12:57:22 PM Ashley Siracusa ashleysiracusa@gmail.com	To whom it may concern, I have been the Store Manager of Green Jar in the Matsu since we opened four years ago. Since day one, our number one complaint from our community is the 5mg limit in edibles. The reasoning being that often you have to consume

Submitted By	Comment
Wasilla, AK, US **Anonymous User**	large quantities of the products to get a sufficient dose. This makes it very expensive for the market and consumers and makes it so you have to physically eat large portions. With the 5mg limit, we are not competing with the black market. We often hear from folks that they continue to buy edibles illegally because of this issue. Let's change that! Let's make sure that consumers are buying safe, tested products. Thank you for your consideration, Ashley Siracusa
3/1/2021 3:48:24 PM Lance Roberts Roberts.Lance@gmail.com Fairbanks, AK, US **Anonymous User**	This regulation makes no sense whatsoever. We've already unleased a toxic drug that since legalization in states of the U.S. we've seen an increase in DUIs and fatalities. There is no reason to double the dosage in food items. Please remember that incidents of children accidentally consuming marijuana edibles are still occurring and many children have been recorded as being hospitalized following their consumption of THC. Instead of increasing the danger and lethality of each dose please reject this regulation.
2/14/2021 12:45:59 PM Dara Cameron Kenai, AK, US **Anonymous User**	The raising of the edible limit has been long overdue here in Alaska, and while I do not feel that raising the serving limit from 5mg to 10mg, or a max package limit from 50mg to 100mg is by any means sufficient, I, as a consumer, do feel it is a step in the right direction towards helping me self-medicate in the most cost effective, safe, and legal way possible. Hopefully this change, if passed, will only continue to build supporting evidence of the efficacy of cannabis as a medical aid, as well as prove to those opposed to cannabis, in part or in full, that the consuming public at large can and will be responsible with edible consumption, even if those doses are higher.
1/29/2021 5:07:59 PM Rob Becker robertbecker72381@gmail.com New Smyrna Beach, FL, US **Anonymous User**	Those Limits seem far to low and would end up with people just needing to purchase more often. Personally a single 100mg cookie edible hardly does anything for me.
1/29/2021 9:02:15 AM Peter Kennedy bigdaddychickybaby@yahoo.com Sitka, AK, US **Anonymous User**	We are in full support of the proposed changes to the THC content for Marijuana edibles. Being older we have found that the Marijuana edibles help immensely with our aches & pains, any loss of appetite, and our older age mood swings. Hopefully these changes will decrease the packaging costs and make the Marijuana edibles more affordable not only to those of us on limited incomes, but everyone else who benefits from these products.
1/18/2021 3:20:29 PM Christopher Farris cfarris@greenjarak.com Wasilla, AK, US **Anonymous User**	AMCO Board and Staff, I approve of this regulation change as written. I think it is time that we increase our edible limit and bring it inline with the industry norm that has been established by many other states. The following 7 states currently have an recreational marijuana program that has a 10mg per serving, 100mg per package limit: Washington State, Colorado, California, Nevada, Michigan, Vermont and Maine. Many of these states have been selling edibles at these potencies for many years with no issues and there are no states that have a lower potency limit than Alaska does. I see no logical reason not to increase our edible limits to match what a large majority of the industry thus far is doing. Thank you, Chris Farris
1/13/2021 6:53:42 PM heather t bandgeek907@gmail.com Clackamas, OR, US **Anonymous User**	I support the proposed increase of thc mg per serving to 10mg and packing to 100mg. thank you
