Alaska Marijuana Control Board

Operating Plan Supplemental
Form MJ-05: Marijuana Product Manufacturing Facility

What is this form?

This operating plan supplemental form is required for all applicants seeking a marijuana product manufacturing facility license and must accompany the **Marijuana Establishment Operating Plan (Form MJ-01)**, per 3 AAC 306.020(b)(11). Applicants should review **Chapter 306: Article 5** of the **Alaska Administrative Code.** This form will be used to document how an applicant intends to meet the requirements of those regulations. If your business has a formal operating plan, you may include a copy of that operating plan with your application, but all fields of this form must still be completed per 3 AAC 306.020 and 3 AAC 306.520(3).

What additional information is required for product manufacturing facilities?

Applicants must identify how the proposed establishment will comply with applicable regulations regarding the following:

- Prohibitions
- Equipment, compounds, and processes to be used
- Proposed marijuana concentrates and marijuana products
- Proposed product packaging and sample labels
- Waste disposal plan
- Testing

This form must be submitted to AMCO's main office before any marijuana product manufacturing facility license application will be considered complete.

Section 1 – Establishment Information

Enter information for the business seeking to be licensed, as identified on the license application.

Licensee:	Axion Enterprises, LLC	**License Number:**	12769		
License Type:	Marijuana Product Manufacturing Facility				
Doing Business As:	Secret Garden Cannabis				
Premises Address:	726 E 15th Ave, Suite 2				
City:	Anchorage	**State:**	ALASKA	**ZIP:**	99501

Alaska Marijuana Control Board

Operating Plan Supplemental

Form MJ-05: Marijuana Product Manufacturing Facility

Section 2 – Prohibitions

Applicants should review 3 AAC 306.510 and be able to answer "Agree" to all items below.

The marijuana product manufacturing facility will not:	Agree	Disagree
Sell, deliver, distribute, or transfer any marijuana, marijuana concentrate, or a marijuana product directly to a consumer, with or without compensation	☑	☐
Allow any person, including a licensee, employee, or agent, to consume marijuana, marijuana concentrate, or a marijuana product on its licenses premises	☑	☐

The marijuana product manufacturing facility will not manufacture or sell any product that:	Agree	Disagree
Is an adulterated food or drink	☑	☐
Closely resembles a familiar food or drink item including candy	☑	☐
Is packaged to look like candy, or in bright colors or with cartoon characters or other pictures or images that would appeal to children	☑	☐

Section 3 – Equipment, Compounds, and Processes to be Used

Review the requirements under 3 AAC 306.555, and identify how the proposed premises will meet the listed requirements.

Describe the equipment and solvents, gases, chemicals, and other compounds the marijuana product manufacturing facility will use to create marijuana concentrates:

Equipment:Commercial oven, Supercritical CO2 botanical oil extractor, Hydraulic rosin press
Solvents, gases, chemicals: CO2, ethyl alcohol, acetone, citric acid, activated charcoal.

Phone: 907.269.0350

Alaska Marijuana Control Board

Operating Plan Supplemental

Form MJ-05: Marijuana Product Manufacturing Facility

Describe the processes to be used to create marijuana concentrates:

Subcritical, critical and supercritical CO2 extraction: Ground marijuana material is loaded manually into a stainless steel vessel, which is then pressurized. CO2 passes through the material and caries out the cannabinoids, terpenes, plant waxes, and other volatile organic compounds. Pressures and temperatures can be varied to target specific compounds. The vessel is then depresurized, the plant material is disposed of according to 3 AAC 306.740 and the concentrate is removed from its collection vessel and stored in a freezer.

Ethanol extraction both of raw material and of CO2 extracted material: Pure, lab grade ethanol is added to ground marijuana material or marijuana concentrate and the mixture is placed in a refrigerator or freezer for a specific period of time, ranging from an hour to several days. The plant wax is then filtered out of the mixture using either a pump and filter with plumbing or a vacuum buchner funnel. The filtered plant wax is disposed of and the ethanol/concentrate mixture is removed from its collection vessel and stored in a freezer.
Fractional distillation:The ethanol/concentrate mixture is placed under vacuum and heated to remove specific impurities. Vacuum pressure and temperature are varied to target specific impurities, such as ethanol and water. The ethanol is collected and saved for future use. The water is disposed of. The refined marijuana concentrates are removed and stored in a freezer.

Hydraulic rosin press extraction:Ground marijuana material or whole flower is placed into a stainless steel die, which is loaded into a hydraulic press. The die is heated with an electric element while the hydraulic press squeezes the concentrates out of the marijuana plant material. The die is then removed from the press and the marijuana plant material is disposed of according to 3 AAC 306.740. The marijuana concentrates are removed from the die and stored in a freezer.

Ice water extraction: Ground marijuana material or whole flower is placed into a bucket lined with cloth sieves. The bucket is then filled with ice water, and the mixture is manually agitated. After the ice melts, the sieves are removed sequentially, leaving concentrate of different consistency in each screen. The marijuana plant material is disposed of according to 3 AAC 306.740. The concentrates can be heated in an oven to remove residual moisture, then stored in a freezer.

Dry ice extraction: This process is identical to that of ice water extraction, except granulated dry ice (CO2) is used instead of water.

Section 4 – Proposed Marijuana Concentrates and Marijuana Products

Review the requirements under 3 AAC 306.520 - 3 AAC 306.525 and 3 AAC 306.560, and identify how the proposed establishment will meet the listed requirements. **Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.**

Product Name:	Secret Garden Ganja Bar
Type:	Edible Marijuana Product

Product Description: Details must include the color, shape, and texture.	The Secret Garden Ganja Bar is a rectangular shaped chocolate bar that will vary in color from light to dark brown and range in texture from smooth to coarse.

Ingredients: This box is not applicable to marijuana concentrates	CO2 concentrate oil, cocoa butter, maple syrup, cacao powder, unsweetened cocoa powder, vanilla extract, roasted almonds or other nuts, mint, sea salt, raspberry, coconut oil, honey

Standard Production Procedure and Detailed Manufacturing Process:	Melt butter (off direct heat) in double boiler. After heat, add maple syrup and whisk until smooth. Add cacao powder, vanilla extract and mix to taste. Measure and pour the tempered mixture into one, five piece mold with almonds, sea salt and any other non cannabis ingredients. Refrigerate to harden.

Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Section 5 – Proposed Product Packaging and Sample Labels

Review the requirements under 3 AAC 306.520 and 3 AAC 306.565 – 3 AAC 306.570, and identify how the proposed establishment will meet the listed requirements. **Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.**

Product Name:	Secret Garden Ganja Bar
Type:	Marijuana Edible Product

Packaging Description: Details must include the color(s), size, packaging materials used, total amount of THC, individual serving sizes (if multiple), and other specifics showing compliance with 3 AAC 306.565. Attached photos, drawings, or graphic representations are preferred.	Secret Garden Ganja Bars will be packaged in childproof, food grade, opaque mylar bags approximately 6' X 4" X 2" with an optional clear section to display the product. This package is to be placed into completely opaque exit packaging in compliance with 3 AAC 306.345(a)(3) at the time of purchase from a retail store. Individual packages will contain either one or two bars not to exceed 50 mg of THC per package and no more than 5 mg per demarcated serving. One serving equals 5mg of THC and each serving is clearly delineated with demarcations.	

Sample Labels: Provide sample labels showing how the labeling information required in 3 AAC 306.570 will be set out.

Section 4 – Proposed Marijuana Concentrates and Marijuana Products

Review the requirements under 3 AAC 306.520 - 3 AAC 306.525 and 3 AAC 306.560, and identify how the proposed establishment will meet the listed requirements. **Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.**

Product Name:	Green Beans
Type:	Marijuana Edible Product

Product Description: Details must include the color, shape, and texture.	Secret Garden Green Beans consist of chocolate covered espresso beans, spherical in shape and ranging in color from dull green to light brown to dark brown with a smooth texture.

Ingredients: This box is not applicable to marijuana concentrates	CO2 concentrate oil, chocolate, espresso beans, mint, cocoa butter, coconut oil

Standard Production Procedure and Detailed Manufacturing Process:	In double boiler, melt chocolate with other ingredients including CO2 concentrate oil, until very creamy. Add coffee beans and stir until completely coated. Remove with slotted spoon, allowing excess chocolate to drip off and place beans on wax paper. Once the coffee beans have cooled sufficiently, but while the chocolate is still a little soft, roll the beans in your hands to form round balls. Gloves must be worn. Roll each bean in cocoa and set aside until chocolate has hardened.

Product Name:	Totem Tinctures
Type:	Marijuana Edible

Product Description: Details must include the color, shape, and texture.	Totem Tinctures are pre-loaded sealed pipettes or syringes filled with cannabis oil. Tinctures have a consistency that varies from liquid to gel form ranging from light yellow to dark amber in color.

Ingredients: This box is not applicable to marijuana concentrates	CO2 oil and food grade ethanol

Standard Production Procedure and Detailed Manufacturing Process:	High purity, food grade ethanol is measured using a pipette and placed in a preloaded syringe not to exceed 50mg THC per syringe. High purity cannabinoid oil is then measured using a pipette and added to the ethanol. The (container) is then sealed and stored in a refrigerator. Syringe will have demarcations indicating each 5mg of THC serving.

Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.	Product is for oral consumption. This product provides an edible option to consumers who do not want to consume sugar/calories that most edibles contain.

Product Name:	Super Baked Alaska
Type:	Marijuana Edible Product

Product Description: Details must include the color, shape, and texture.	Super Baked Alaska consists of a flat sponge cake and/or brownie layered with ganache (whipped filling with chocolate and cream) and covered with flavored meringue. Each Super Baked Alaska is circular in shape and has a slightly browned meringue topping.

Ingredients: This box is not applicable to marijuana concentrates	CO2 concentrate (waxy oil), flour, butter, cream butter, sugar, eggs, chocolate, white chocolate, coco powder, baking powder, heavy whipping cream, vanilla extract, ghirardelli triple coco brownie mix, cream of tartar, amaretto, cherry flavoring, raspberry flavoring, flavored syrups, food coloring.

Standard Production Procedure and Detailed Manufacturing Process:	Cake: Mix Cream, CO2 oil, butter and sugar. Add eggs one at a time then mix with dry ingredients (flour, baking powder, vanilla extract or brownie mix). Bake 15-20 minutes at 350 degrees in individual mini muffin tins. Meringue: Whisk egg whites with sugar, cream of tartar until soft peaks form then fold on more sugar.

Section 5 – Proposed Product Packaging and Sample Labels

Review the requirements under 3 AAC 306.520 and 3 AAC 306.565 – 3 AAC 306.570, and identify how the proposed establishment will meet the listed requirements. **Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.**

Product Name:	Pot Brownie
Type:	Marijuana Edible Product

Packaging Description: Details must include the color(s), size, packaging materials used, total amount of THC, individual serving sizes (if multiple), and other specifics showing compliance with 3 AAC 306.565. Attached photos, drawings, or graphic representations are preferred.	Pot brownie's will be packaged in a clear, food grade container approximately 8"x6"x4" and then placed in a childproof, opaque, and sealed mylar bag with an optional clear section to display the product, approximately 9"x12"x4". One brownie equals one serving and 5 mg of THC. Each individual plastic container contains 8 individual servings of the brownies totaling 40mg of THC per container.	

Sample Labels: Provide sample labels showing how the labeling information required in 3 AAC 306.570 will be set out.

Section 4 – Proposed Marijuana Concentrates and Marijuana Products

Review the requirements under 3 AAC 306.520 - 3 AAC 306.525 and 3 AAC 306.560, and identify how the proposed establishment will meet the listed requirements. **Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.**

Product Name:	THC Truffles
Type:	Marijuana Edible Product

Product Description: Details must include the color, shape, and texture.	Each truffle is round in shape and ranges from light brown to black and may have an additional chocolate drizzle covering the top. The truffle is chocolate on the outside and a flavored ganache (whipped filling with chocolate and flavored cream) on the inside. The consistency ranges from smooth to speckled on the outside with a creamy center.

Ingredients: This box is not applicable to marijuana concentrates	CO2 concentrate (waxy oil), dark chocolate, coco, heavy whipping cream, semi sweet chocolate, butter, corn syrup, chocolate chips, luster dust, coconut, nuts, chocolate shaving, cinnamon, fruit puree, citrus zest, flavored oils

Standard Production Procedure and Detailed Manufacturing Process:	Chocolate: combine heavy whipping cream and melted chocolate with butter in a double boiler Ganache: whisk chocolate, heavy whipping cream and other choice ingredients together with butter and corn syrup (for flavor and texture) and dip into chocolate. Let rest for 12-24 hours. 2 week shelf life at room temperature. For longer term storage, refrigerate for 24 hours before freezing to prevent temperature shock. Temper to store in freezer for up to 2 years and avoid temperature changes. Thaw at room temperature before removing from individual packaging.

Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Review the requirements under 3 AAC 306.520 - 3 AAC 306.525 and 3 AAC 306.560, and identify how the proposed establishment will meet the listed requirements. **Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.**

Product Name:	Comfort Caramels
Type:	Marijuana Edible Product

Product Description: Details must include the color, shape, and texture.	Comfort caramels will be square or oval shaped with color ranging from light brown to dark brown. Texture will be smooth on the outside with a chewy center.

Ingredients: This box is not applicable to marijuana concentrates	CO2 concentrate, butter, brown sugar, sweetened condensed milk, corn syrup, salt, vanilla extract.

Standard Production Procedure and Detailed Manufacturing Process:	Line a baking dish with greased parchment paper. Over medium heat, warm the cream, butter and salt in a saucepan until the butter melts. Remove from heat. In another saucepan, combine the sugar, corn syrup and water. Stir until the sugar is evenly moistened to form a thick grainy paste. Wipe down the side of the pan with a damp pastry brush removing sugar crystals from above the mixture. Immerse a thermometer into the mixture. Do not stir at this point. Cook over medium heat. Let the mixture come to a boil without stirring. When mixture hits about 250 degrees the syrup will turn transparent and boil rapidly. Around 320 degrees the syrup will darken slightly. After heat, whisk warm cream and butter into the sugar syrup gently. Return to heat letting the caramel come to a boil without stirring. Color will start off as a soft buttery yellow and turn into a dark reddish brown caramel. whisk vanilla into final mixture. Pour caramel into mold and rest for at least two hours. Separate into single servings from mold and package.

Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Product Name:	Cotton Mouth Candy
Type:	Marijuana Edible Product

Product Description: Details must include the color, shape, and texture.	Cotton Mouth Candies will be square or oval shaped and come in a variety of flavors. The color will vary with flavor from dull red to dull dark and light green and be smooth and slightly sticky in texture.

Ingredients: This box is not applicable to marijuana concentrates	CO2 concentrate, sugar, water, corn syrup, food coloring, essential oils, flavoring

Standard Production Procedure and Detailed Manufacturing Process:	In large saucepan mix together the sugar, corn syrup and water until dissolved. Cook the mixture at 300-310 degrees until it reaches the hard cracked stage in a large saucepan. When ready it should start to yellow around the edges of the pan. Remove from burner to begin cooling. Quickly add any flavoring and food coloring. Pour the liquid candy into an aluminum foil lined pan or partitioned form to separate. Mark the candy into partitions containing no more than 5mg of THC per piece. Once hardened, remove the candy from the foil. Indentations from forming should break apart easily or use a knife to separate candy servings.

Section 4 – Proposed Marijuana Concentrates and Marijuana Products

Review the requirements under 3 AAC 306.520 - 3 AAC 306.525 and 3 AAC 306.560, and identify how the proposed establishment will meet the listed requirements. **Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.**

Product Name:	Bubble Hash
Type:	Marijuana Concentrate

Product Description: Details must include the color, shape, and texture.	Bubble hash ranges between granular and crumbly to waxy and sticky and is light yellowish to light brown in color. Bubble hash is soft and pliable to the touch. Intended for use as an inhalant.

Ingredients: This box is not applicable to marijuana concentrates	N/A

Standard Production Procedure and Detailed Manufacturing Process:	Ground marijuana material or whole flower is placed into a bucket lined with cloth sieves. The bucket is then filled with ice water or dry ice, and the mixture is manually agitated. After the ice melts, the sieves are removed sequentially, leaving concentrate of different consistency in each screen, manually separated into the appropriate weights for retail, and stored in a freezer. The marijuana plant material is disposed of according to 3 AAC 306.740. The concentrates can be heated in an oven to remove residual moisture before storing if desired.

Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Review the requirements under 3 AAC 306.520 - 3 AAC 306.525 and 3 AAC 306.560, and identify how the proposed establishment will meet the listed requirements. **Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.**

Product Name:	Green Acres Oil
Type:	Marijuana CO2 Concentrate

Product Description: Details must include the color, shape, and texture.	Green Acres Oil is a liquid that is clear with a yellow tint and will be available in multiple strains and terpene combinations intended for consumption, Green Acres Oil is manufactured only for wholesale.

Ingredients: This box is not applicable to marijuana concentrates	N/A

Standard Production Procedure and Detailed Manufacturing Process:	Ground marijuana material is decarboxylated in an electric oven. The material is then extracted using the CO2 extractor with specific parameters for oil product. The resulting extract is then further refined using ethanol extraction and then fractional distillation. The plant material, wax, and other inert materials are disposed of according to 3 AAC 306.740 and the final extract is packaged and stored in a freezer.

Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.	*Note - this picture is only to show color and texture of product. This product will no be sold in syringes and will only be used in house for edibles, and sold to other manufactures as wholesale.

Product Name:	Green Acres Vape Pen
Type:	Marijuana CO2 Concentrate Vape Pen

Product Description: Details must include the color, shape, and texture.	Green Acres Vape Pen is a liquid that is clear with a yellow tint and will be available in multiple strains and terpene combinations. Intended as an inhalant.

Ingredients: This box is not applicable to marijuana concentrates	N/A

Standard Production Procedure and Detailed Manufacturing Process:	An empty vape pen cartridge is placed on a holding rack. High purity cannabinoid Green Acres oil is then measured using a pipette and deposited into the cartridge. Vape pen cartridges packaged for retail will hold one quarter ml (1/4ml), one half ml (1/2ml), and one ml (1 ml) of high purity oil. Multi-channel pipettes can be used in order to fill multiple cartridges at once. The cartridge is then sealed and stored in a refrigerator. Once ready for retail sale, cartridge will be assembled on a vape pen that is battery operated and sold as one complete unit.

Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.

Section 6 – Waste Disposal Plan

Review the requirements under 3 AAC 306.520, and identify how the proposed premises will meet the listed requirements.

Describe the marijuana product manufacturing facility's plan for disposal of any expired or outdated marijuana or marijuana product that is not sold or transferred to another licensed marijuana establishment:

Secret Garden Cannabis has prepared a disposal plan for disposing of all marijuana product that does not meet state testing requirements and Secret Garden Cannabis' internal quality standards for any reason, including, but not limited to, disease, infestation, and mishandling. Rendering marijuana unusable before disposal will ensure that marijuana products are safely kept away from the public. Secret Garden Cannabis will ensure that all marijuana products are rendered unusable prior to leaving the facility. The Manager will maintain a log on the status of all marijuana product waste, tracking the type of waste, the date of disposal, the date It was rendered unusable, and the date that it was picked up by the disposal company. All marijuana products marked for disposal will be stored in a secured bin, separated from all other products and materials, until they can be rendered unusable. Once rendered unusable, marijuana products will be securely stored in locked containers located on the premises. Marijuana waste will be rendered unusable (after giving AMCO Enforcement a 3 day notice) by grinding or mixing the materials with other compostable and non-compostable material until the resulting mixture is no more than fifty percent (50%) marijuana waste. All locks will comply with the highest UL standards. Only authorized personnel will have access to the keys that lock and unlock the disposal containers. A waste truck will collect the waste and dispose of it at the city solid waste facility. To ensure tracking and to ensure that no diversion occurs, a manager will meet with the waste truck driver and collect a signature and the name of the waste truck driver, the date, time, and the type of marijuana product waste being collected. This information will be entered Into a log by the manager, which will be securely stored and made available to AMCO upon request. The manager will make arrangements with the disposal company if ever the dumpsters are full prior to pickup.

Section 7 – Testing

The area where in-house testing will occur must be identified on the premises diagram, per 3 AAC 306.520(2).	Yes	No
Will the marijuana product manufacturing facility perform in-house testing (as defined in 3 AAC 306.990(b)(20))?	☑	☐

Applicants should review 3 AAC 306.550 and be able to answer "Agree" to the item below.

The marijuana cultivation facility applicant has:	Agree	Disagree
Read and understands and agrees to the required laboratory testing set forth in 3 AAC 306.550	☑	☐

I declare under penalty of perjury that I have examined this form, including all accompanying schedules and statements, and to the best of my knowledge and belief find it to be true, correct, and complete.
