This is a notice to you as a licensee that you are being issued a notice of violation for the purposes described in 3 AAC 306.806(e). A description of the violation is as follows,
NOTE: This is not an accusation or criminal complaint.

On 06/02/2025 Investigator Bankowski received a Metrc report that Anchorage Bowl Retail License 12316 had made 53 adjustments in the month of May, all of which were over 1000 grams or 1000 each in quantity except for one that was 100 grams. Inv. Murray went to Anchorage Bowl to conduct an inspection on 06/3/2025, During the first inspection Inv. Murray determined that the Licensee Shelton Landon was too impaired to conduct an inspection. Anchorage Bowl has three licenses in one building Retail Marijuana License 12316, Limited Cultivation License 12317, and Manufacturing License 12318. Inv. Murray and Shelton were unable to find three packages that were showing in metrc for license 12318. The number of plants in License 12317 matched what was in metrc.

Inv. Murray, Inv. Hamilton and Inv. Linger came for a second inspection on 06/09/2025 of license 12316. The products Investigators counted were still not matching counts provided by Shelton. Products were mixed up with different products. Inv. Murray decided to give Shelton another week to get things in order. Shelton claimed he was making the adjustments because his point of sale Cova was sending him alerts to correct Metrc data. Shelton was still unable to find the packages that were supposed to be on license 12318.

On 6/13/2025 Investigator Murray, Hamilton, and Linger came back for a third time and conducted an inspection on License 12316. This time the counts that were with the products were accurate and it appeared to be consistent with Metrc. Between 06/1/2025 and 06/13/2025 there were 609 package adjustments, over 30 of them were above 1000 grams or each. Shelton said repeatedly through the inspections that paperwork and clerical work have never been his forte. Shelton stated that adjustments were to get his POS system to match metrc. Inv. Murray asked if the adjustments were made up and Shelton said right.

Investigator Murray conducted an analysis of the 53 adjustments in may. Inv. Murray discovered a pattern of the tag starting with a small inventory and later Shelton would adjust the number up claiming it was a miss count or entry error by thousands of grams and proceed to sell more than the original amount. There were 53 adjustments reported by Metrc but only 37 tag numbers were involved. In conclusion 2,521 grams and 3 each are missing with no explanation. 25,189 grams (58.03 pounds) were sold or still in Metrc inventory more than what was supposed to be in the packages. 2749 each were sold, more than what was in the packages. There was one transaction of 56 grams which was a violation.

See attachments for further details.

On 06/02/2025 Investigator Bankowski received a Metrc report that Anchorage Bowl Retail License 12316 had made 53 adjustments in the month of May, all of which were over 1000 grams or 1000 each in quantity except for one that was 100 grams. Inv. Murray went to Anchorage Bowl to conduct an inspection on 06/3/2025 and met Licensee Shelton Landon. When Shelton opened the door, it was immediately apparent that he had red watery eyes, slurred speech and slow uncoordinated movements. Inv. Murray did not detect the odor of alcohol, leading him to believe Shelton was under the influence of and intoxicated by marijuana. Anchorage Bowl has three licenses in one building Retail Marijuana License 12316, Limited Cultivation License 12317, and Manufacturing License 12318.

Inv. Murray tried to conduct an inspection of Retail Marijuana license 12316. Inv. Murray would ask for a product by Metrc number and Shelton would enter a different number. Inv. Murray asked Shelton to count a product and Shelton would skip numbers while counting. Inv. Murray asked why Shelton was making package adjustments in the 1000's. Shelton stated that his point-of-sale system was not communicating with Metrc and it is sending him alerts to correct the data in Metrc. Shelton stated that he was trying to fix the alerts one by one in Metrc. Inv. Murray determined that Shelton was too impaired to continue the inspection. Inv. Murray moved on to Manufacturing License 12318 where three packages were supposed to be. We were unable to locate any packages. Inv. Murray moved on to Cultivation License number 12317. The number of plants in the cultivation matched what was on the Metrc scanner. Inv. Murray advised that he was going to be back on Monday 6/9/2025 at 11:00AM to conduct another inspection of the retail store.

On Monday 6/9/2025 Investigator Murray returned to the Anchorage Bowl with Investigator Hamilton and Linger. Shelton had counted the products and put the count number on a piece of paper in each product bin. When the investigators counted most of the counts were off by one or two products and multiple products had packs of the wrong Metrc number mixed in or wrong weight of product mixed in. Inv. Murray decided to give Shelton another week to get everything organized. Inv. Murray then asked about the Manufacturing license 12318 which showed Metrc numbers 1A4020300008B77000000127 with 8000g listed for quantity, 1A4020300008B77000000111 with 57,890 ea for quantity, and 1A4020300008B77000000011 with 596g for quantity. Shelton stated that he had only been working on the retail side and wasn't sure what happened to the products in the license 12318.

On 06/13/2025 at 10:00am Inv. Murray, Linger, and Hamilton returned and did spot counts. This time the counts that were with the products were accurate and it appeared to be consistent with Metrc. Between 06/1/2025 and 06/13/2025 there were 609 package adjustments, over 30 of them were above 1000 grams or each. Shelton said repeatedly through the inspections that paperwork and clerical work have never been his forte. When asked about what the adjustments were for. Shelton stated that he was trying to get Metrc to match his POS system. Inv. Murray asked if all the adjustments were just made-up Shelton confirmed by saying, “Right.”

After the inspections Inv. Murray further analyzed the 53 large package adjustments for the month of May in Metrc. Many of the adjustments were made to package tags that had been finished several years ago. The Metrc history showed that Shelton would adjust the tag to zero and finish the tag. The tag histories then start showing Shelton unfinishing tags and adjusting the amount up in the thousands of grams. The Metrc history then shows that the point-of-sale system COVA uploading the sales from dates prior to and after the finish dates. At first it appears as if Shelton Landon was just trying to get the POS system to transfer data to Metrc by increasing the numbers dramatically. When thoroughly examining the history of each package Inv. Murray discovered a pattern of the tag starting with a small inventory and later Shelton would adjust the number up claiming it was a miss count or entry error by thousands of grams and proceed to sell more than the original amount. There were 53 adjustments reported by Metrc but only 37 tag numbers were involved.
