Alaska Marijuana Control Board

Operating Plan Supplemental
Form MJ-05: Marijuana Product Manufacturing Facility

What is this form?

This operating plan supplemental form is required for all applicants seeking a marijuana product manufacturing facility license and must accompany **Form MJ-01: Marijuana Establishment Operating Plan**, per 3 AAC 306.020(b)(11). Applicants should review **Chapter 306: Article 5** of the **Alaska Administrative Code.** This form will be used to document how an applicant intends to meet the requirements of the statutes and regulations.

If your business has a formal operating plan, you may include a copy of that operating plan with your application, but all fields of this form must still be completed per 3 AAC 306.020 and 3 AAC 306.520(3).

What additional information is required for cultivation facilities?

Applicants must identify how the proposed establishment will comply with applicable regulations regarding the following:

- Equipment, compounds, and processes to be used
- Waste disposal
- Testing procedure and protocols
- Proposed marijuana concentrates and marijuana products
- Proposed product packaging and sample labels
- Prohibitions

This form must be completed and submitted to AMCO's main office before any new or transfer application for a marijuana product manufacturing facility or marijuana concentrate manufacturing facility license will be considered complete.

Section 1 – Establishment Information

Enter information for the business seeking to be licensed, as identified on the license application.

Licensee:	Anchorage Bowl, LLC	**MJ License #:**	12318		
License Type:	Marijuana Product Manufacturing Facility				
Doing Business As:	Anchorage Bowl, LLC				
Premises Address:	4000 Spenard Road				
City:	Anchorage	**State:**	Alaska	**ZIP:**	99517

AMCO Received 11/28/2018

Section 2 – Overview of Operations

2.1. Provide an overview of your proposed facility's operations. Include information regarding the intake, flow, and transfer of marijuana, marijuana concentrate, and marijuana product at and from your premises:

When incoming marijuana or marijuana product has been transferred to, or is being picked up from, our manufacturing facility, licensee and/or designated employee will anticipate the arrival of the transportation agent and transfer at or about the ETA displayed within METRC. As part of our standard operating procedure, we will request that the licensee sending the transfer instruct the transportation agent to contact our facility by phone, just prior to arriving at our facility. If we have not heard from the agent within 30 minutes of the anticipated delivery time, every effort will be made to reach the agent or licensee sending the transfer. Agents will be instructed to park at the back door marked "delivery door" or "delivery entrance." Licensee or designated employee will greet transportation agent at the back door and will accompany them through the first rear door, into the rear security checkpoint/back arctic entry way, where their ID will be checked; visitor information will be logged; visitor tag(s) will be issued and hung from visitor(s) neck. All visitors will be escorted by licensee or designated employee while on the licensed premises.

After signing in and tagging in, employee will escort visitor through the second rear door, passing through the cultivation space briefly before entering the manufacturing facility area, and will be accordingly tagged and signed into both facilities. Incoming and outgoing transfers will occur in the kitchen. Incoming product will be weighed and/or counted and verified to the manifest, invoice, and package tags. Product will then be signed for on the manifest and also accepted within METRC. Any discrepancies will be noted within METRC and internal logs; every attempt will be made to notify sending party of any discrepancy before entering an adjusted weight or quantity into METRC. This would be in the event of variance due to identifiable and obvious error such as, but not limited to, including the weight of the bag or humidity pack in the package weight.

After marijuana and marijuana product are received, they will be stored in the secure storage area and/or secure storage refrigerator/freezer as appropriate, until use.

Use of marijuana and marijuana product in creation of base concentrates and consumable retail marijuana products will be tracked on internal logs as well as within METRC to enable a checks and balances system designed to provide maximum accountability and quality control. Routine internal audits will be utilized to ensure accuracy, accountability, and compliance.

We will be purchasing and using both wholesale marijuana and marijuana products in producing our marijuana products. We will be using non-combustible extraction methods to produce our own base concentrates, as well as be utilizing other commercially available concentrates from Alaskan manufacturers, as available. We plan to work closely with New Frontier Development in product development and testing to ensure our recipes and methods produce homogeneously mixed and dosed production lots, as well as to determine appropriate expiration dates of our products.

Each production lot will be entered into METRC in its entirety as a package, and a related package will be created from that package, consisting of a randomly selected lab sample representing the production lot. Each production lot will be individually wrapped, where appropriate, and placed in quarantine in the secure fridge, secure freezer, or secure storage, as appropriate, and will be stored with its respective package tag for easy identification. After the lab samples have passed testing, the products will be removed from quarantine and further packaged, labeled, and stored in secure storage for wholesale distribution. If a product fails testing, it will remain in quarantine until AMCO has been notified of the facility's intent to destroy the product, three days prior to the intended destruction date.

Wholesale orders will be made into packages destined for retail, from packages of the original production lot of each product. Package tag tracking logs will be kept internally as well as within METRC, tracking the use and life of each of our package tags. Temperature sensitive products will be transported in locking coolers with cool packs and shelf stable products will be transported in secure lock boxes, which will be secured with locks and made tamper proof through the use of serial numbered zip ties. The package tags, manifests, and labs will be locked in the box with the product, and additional disclosures and paperwork will be in a nondescript envelope affixed to the outside of the shipping container containing the products. Signed transportation manifests and their associated invoices will all also be kept in company records.

Section 3 – Equipment and Compounds to be Used

Review the requirements under 3 AAC 306.555.

3.1. Describe the equipment and solvents, gases, chemicals, and other compounds the marijuana product manufacturing facility will use to create marijuana concentrates:

We will be using non-combustible extraction methods to include but not limited to the use of stove-top steeping and also readily available tools such as the magic butter machine. We may use stove top cooking, over baking (decarboxylating), crock pots, rosin presses, the magic butter machine, or similar, and may improve our extraction methods and equipment during our development phase while working closely with New Frontier Development, or other consultants, and may use butters, oils, and heat to create marijuana concentrates.

AMCO Received 11/28/2018

Section 4 – Waste Disposal

Review the requirements under 3 AAC 306.740.

You must be able to certify the statement below. Read the following and then sign your initials in the box to the right: Initials

4.1. The marijuana product manufacturing facility shall give the board at least three days written notice required under 3 AAC 306.740(c) before making marijuana waste unusable and disposing of it.

4.2. Describe how you will store, manage, and dispose of any solid or liquid marijuana waste, including expired or outdated marijuana or marijuana product, in compliance with any applicable laws. Include details about the material(s) you will mix with ground marijuana waste and the processes that you will use to make the marijuana waste unusable for any purpose for which it was grown or produced:

All liquid and solid waste, including expired or outdated marijuana or marijuana product, will be kept in quarantine in the temperature-appropriate secure storage area until Amco has been notified of the intent to render the product unusable and dispose of product. The product will be clearly marked as waste. Waste logs will be kept to track the source, volume, and disposition of all waste

Prior to deeming marijuana as waste, we will notify the AMCO 3 days in advance in writing. Once the MCB has been notified, product awaiting disposal will be separated and stored in our secure waste storage area. Our secure waste storage is secured and monitored in compliance to 3 AAC 306.715 and 3 AAC 306.720, utilizing commercial steel-doors with key code/fingerprint locking mechanisms and high definition surveillance cameras.

Upon approval, any marijuana waste, including expired marijuana products will be ground and mixed with organic or non-organic material (household garbage, paper products, food products, leaves, grass clippings etc.)to product a final waste product that is no more than 50% marijuana product. Once marijuana product is reconciled to be unusable for any and all intended purposes, we will transfer the waste to our on-site secured dumpster to await final disposal. Upon final disposal, we will record the final destination of said waste, in accordance with 3 AAC 306.740(c).

AMCO Received 11/28/2018

Section 5 – Testing Procedure and Protocols

Review the requirements under 3 AAC 306.520 and 3 AAC 306.550.

You must be able to certify the statement below. Read the following and then sign your initials in the box to the right:	Initials
5.1. I will ensure that any individual responsible for collecting random samples for required laboratory testing under 3 AAC 306.455 will prepare the necessary accompanying signed statement, provide the signed statement to the marijuana testing facility, and maintain a copy as a business record under 3 AAC 306.755.	☑

Answer "Yes" or "No" to the following question:	Yes	No
5.2. Will the marijuana product manufacturing facility be performing in-house testing (as defined under 3 AAC 306.990(b)(20)?	☑	☐

If "Yes" to 6.2, you must be able to certify the statement below. Read the following and then sign your initials in the box:	Initials
5.3. The area where in-house testing will occur is clearly identified on the Form MJ-02: Premises Diagram that is submitted with this application.	☑

5.4. Describe the testing procedures and protocols the marijuana product manufacturing facility will follow:

During our product development phase, we will be testing base concentrates frequently for potency and homogeneity as we calibrate our in house testing device(s) and ensure accurate calibration and consistent, reliable results.

In house testing will be performed in the kitchen work space and will be conducted routinely to ensure accurate dosing-in anticipation of variable THC levels naturally occurring in fats and oils infused with THC. In-house logs will be kept tracking the source, production, lab testing, in house testing, and specific usage and destination of all cannabis and cannabis products.

After marijuana products have been produced, they will be individually wrapped, or have intermediate packaging performed, as appropriate, and will be stored in bulk with their respective packages/production lots until testing has passed.

A representative sample of each marijuana product intended for retail sale will be selected at random from each production lot created, and will be sent for lab testing. Remaining products within the package containing the production lot from which the lab sample was taken will be physically packaged together, placed into quarantine, labeled as being in quarantine, and stored with the package tag associated with the package comprised of the original production lot. After testing has passed, products will go through secondary packaging and labeling and be prepped for wholesaling to retail licensees.

Section 6 – Proposed Marijuana Concentrates and Marijuana Products

Review the requirements under 3 AAC 306.520, 3 AAC 306.525, and 3 AAC 306.560.
Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.

Product Name:	AK Canna-Balm		
Product Type:	Marijuana Product		
Perishable: Yes/No	No	**Shelf Life:** If perishable.	

Product Description: Details must include the color, shape, and texture.	Size = Approximately 2.25"Diameter x 1"Height 1. Un-Scented 2. Scented Green in color, assumes the shape of its container, wax-like outer shell, soft inside. Coconut butter-like texture. Total THC = 50mg, "Do not eat" / "Topical Use Only" 2.0 ounces balm per container (57 grams)
Ingredients: This box is not applicable to marijuana concentrates.	Coconut oil, beeswax, marijuana extract, fragrance (optional)
Standard Production Procedure and Detailed Manufacturing Process:	Heat coconut oil, mix with extract, remove mix from heat, pour into container. Melt beeswax and add coconut oil. Once melted, remove from heat and add fragrance (optional), let cool, package for sale.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.	

AMCO Received 11/28/2018

Section 7 – Proposed Product Packaging and Sample Labels

Review the requirements under 3 AAC 306.520, 3 AAC 306.565, and 3 AAC 306.570.
Attach a completed copy of this page for <u>each</u> proposed marijuana concentrate or marijuana product.

Product Name:	AK Canna-Balm
Product Type:	Marijuana Product

Packaging Description: Details must include the color(s), size, packaging materials used, total amount of THC, individual serving sizes (if multiple), and other specifics showing compliance with 3 AAC 306.565. Please include photos, drawings, or graphic representations.	2.25"Diameter x 1"Height Tin Container Size Product will be inside a heat-sealed Mylar bag with labeling, one side transparent, other side opaque. Opaque child resistant bag added at retail exit. Wholesale marijuana extract obtained from other licensed manufacturers. 50mg Total THC per-package, 2 ounces balm per-package Product will comply with potency limits described in 3 AAC 306.560. Product Packaging will not be targeted for individuals under 21 years of age. Products for transfer will be placed in a sealed, tamper-evident shipping container. Size of packaging may vary. When applicable, serving information will be included on packaging and product will contain clearly visible individual serving indication. All product containers will have affixed labeling in compliance with information described in 3 AAC 306.570. State-approved lab tested THC amounts will be labeled clearly visible on the packaging. Also, packaging will include an identifying tracking number generated by our facility's state-approved marijuana tracking system.

Sample Labels: Provide sample labels showing how the labeling requirements set forth in 3 AAC 306.570 will be met.
