Alaska Marijuana Control Board

Form MJ-16: Proposed New Marijuana Product

What is this form?

This proposed new marijuana product form is required for a marijuana product manufacturing facility licensee who is seeking Marijuana Control Board (MCB) approval of a new marijuana product or marijuana concentrate for production at its licensed premises, as required under 3 AAC 306.100 and 3 AAC 306.525. **The required $250 proposed new marijuana product fee may be made by check, cashier's check, or money order.**

This form must be completed and submitted to AMCO's main office prior to production of any new marijuana product or marijuana concentrate. **The proposed new marijuana product may not be produced unless and until the MCB has approved of the product.**

Please note that licensees seeking approval of more than one proposed new marijuana product or marijuana concentrate must submit a separate completed copy of this form and pay a separate fee for each proposed new marijuana product or marijuana concentrate.

Section 1 – Establishment Information

Enter information for the business seeking to be licensed, as identified on the license application.

Licensee:	Axion Enterprises, LLC	**MJ License #:**	12769		
License Type:	Marijuana Product Manufacturing Facility				
Doing Business As:	Secret Garden Cannabis				
Premises Address:	726 E. 15th Ave, Suite 2				
City:	Anchorage	**State:**	Alaska	**ZIP:**	99501

Section 2 – Proposed Marijuana Concentrate or Marijuana Product

Enter information for the marijuana concentrate or the marijuana product for which you are seeking MCB approval.

Product Name:	Backwood Boom Blunts		
Product Type: Choose one.	Other Marijuana Product		
Perishable: Yes/No	No	**Shelf Life:** If perishable.	
Intended Use: Smokable/ edible/topical/wholesale/etc.	Smokable		

AMCO Received 12/19/2019

Form MJ-16: Proposed New Marijuana Product

Section 3 – Proposed Product Details

Enter information for the marijuana product for which you are seeking MCB approval.

Product Description: Details must include the color, shape, and texture.	Backwood Boom Blunts will have the shape, texture and color of a marijuana joint or hand-rolled cigarette (only much larger). Color may vary from a light beige to a dark brown color, depending on rolling paper (or similar) used.
Ingredients:	Cannabis flower rolled or filled into a rolling paper, cone paper, natural palm wrap, tea leaf cone, or cannabis leaf wrap and then injected, soaked, dipped, wrapped or a combination thereof with cannabis concentrate (kief, C02 Extracted, Butane Has Oil, Ethanol Extracted, Dry Sift, Ice water extraction hash, rosin pressed oil or any other approved extraction method for this facility)
Standard Production Procedure and Detailed Manufacturing Process:	Cannabis flower will be rolled in the above mentioned rolling paper options. When injected, the pre-rolled product will be held upright, and the extract applied by hand with a syringe or by a mechanized process. When soaked or dipped the product will be weighed afterwards to value the weight of the extract used. When wrapped, the known concentrate value will be applied to a flower "core" before the outer wrap is applied. Ratios of flower to oil may vary depending on the THC concentrations per batch. The following procedure will be sed to report the total THC of the product on the retail label.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.	
Alaska Marijuana Control Board

Form MJ-16: Proposed New Marijuana Product

Section 4 – Proposed Product Packaging and Sample Label

Enter information for the packaging and labeling of the marijuana product for which you are seeking MCB approval.

Packaging Description: Details must include the color(s), size, packaging materials used, total amount of THC, individual serving sizes (if multiple), and other specifics showing compliance with 3 AAC 306.565. Please include photos, drawings, or graphic representations.

Product will be placed in an Opaque plastic tube, glass vial, bag or tin and packaged in resealable Mylar with an impulse or continuous band heat sealer, or in a child resistant box, blister pack or equivalent that meets the board's standards. The information presented on the prototype label shall be representative of future production labels, but differing sizes, shapes, and colors shall be used. The term "Not Intended for Single Serving Use" shall be used on the 1.25-gram version, or larger, because it is a high THC dose product meant for multiple servings or uses. Because this product line looks like many other pre-rolls the product line label will always clearly state that Cannabis Concentrate, Hash Oil, Hash, or Cannabis Extract is a product component. The individual weight of the cannabis flower and the cannabis concentrate within the pre-roll will be distinguished independently. See the label prototype and photos of packaging options attached. One Gram of Flower tested at 16% THC results in 160 MG of THC, ¼ Gram of CO2 Extracted Cannabis Concentrate tested at 65% THC results in 162.5 MG of THC For a total product THC of 322.5 MG to be reported on the label as such. .5 grams Gram of Flower tested at 16% THC results in 80 MG of THC 1/10 of a Gram of CO2 Extracted Cannabis Concentrate tested at 65% THC results in 65 MG of THC

For a total product THC of 145 MG to be reported on the label as such.1.75 Grams of Flower tested at 20% THC results in 350 MG of THC, .75 Grams of Rosin tested at 60% THC results in 450 MG of THC, .25 Grams of Kief tested at 30% THC results in 75 MG of THC for a total product THC of 875 MG to be reported on the label

Sample Labels: Provide sample labels showing how the labeling requirements set forth in 3 AAC 306.570 will be met.

Produced By: Secret Garden Cannabis
