Alaska Marijuana Control Board

Operating Plan Supplemental

Form MJ-05: Marijuana Product Manufacturing Facility

What is this form?

This operating plan supplemental form is required for all applicants seeking a marijuana product manufacturing facility license and must accompany **Form MJ-01: Marijuana Establishment Operating Plan**, per 3 AAC 306.020(b)(11). Applicants should review **Chapter 306: Article 5** of the **Alaska Administrative Code.** This form will be used to document how an applicant intends to meet the requirements of the statutes and regulations.

If your business has a formal operating plan, you may include a copy of that operating plan with your application, but all fields of this form must still be completed per 3 AAC 306.020 and 3 AAC 306.520(3).

What additional information is required for cultivation facilities?

Applicants must identify how the proposed establishment will comply with applicable regulations regarding the following:

- Equipment, compounds, and processes to be used
- Waste disposal
- Testing procedure and protocols
- Proposed marijuana concentrates and marijuana products
- Proposed product packaging and sample labels
- Prohibitions

This form must be completed and submitted to AMCO's main office before any new or transfer application for a marijuana product manufacturing facility or marijuana concentrate manufacturing facility license will be considered complete.

Section 1 – Establishment Information

Enter information for the business seeking to be licensed, as identified on the license application.

Licensee:	Red Run Cannabis Cultivators, LLC	**MJ License #:**	19372		
License Type:	Marijuana Product Manufacturing Facility				
Doing Business As:	Red Run Cannabis Cultivators, LLC				
Premises Address:	12516 Kenai Spur Hwy, Suite A				
City:	Kenai	**State:**	Alaska	**ZIP:**	99611

Received by AMCO: 2519

Section 2 – Overview of Operations

2.1. Provide an overview of your proposed facility's operations. Include information regarding the intake, flow, and transfer of marijuana, marijuana concentrate, and marijuana product at and from your premises:

A variety of marijuana concentrated products will be created through the use of solvent-based extraction processes as well as through our rosin press or dry-sift processes. Our facility will utilize professional grade extraction and finishing equipment that will be used in strict compliance with the manufacturer's stated requirements and best practices. Each piece of equipment will be certified from a licensed engineer to ensure that the system is commercially manufactured, is safe for its intended use,that it's build to code and is in compliance with local fire, safety and building code requirements.

We will primarily be using a closed-loop, Butane extraction system - where marijuana plant matter is washed with Butane-solvent, which causes the resin glands from the marijuana material to detach from the plant and become suspended in the Butane-solvent solution. The concentrated Cannabis material is then placed into a vacuum oven for several hours to 24 hours in order to purge residual solvents below the State's acceptable ranges.

All employees/agents handling, operating, cleaning or maintaining Red Run's extraction systems will be highly experienced and fully trained on how to use, clean and maintain the extraction system and the equipment/parts therein. Each licensee, employee or agent will be required to have their marijuana handler permit and food work card with them at all times while on premises.

Our facility will receive marijuana plant material from our licensed Cultivation facility as well as other licensed Cultivation facilities in the state. We will employ well-developed Standard Operating Procedures for each critical process within our enterprise. An Intake Procedure will be strictly followed, any marijuana plant material will come through our primary access entry point, located toward the back of the building. Marijuana material will only be accepted pursuant to 3 AAC 306.750. Accepted marijuana material is initially weighed and checked against its Metrc manifest for accuracy. Once weight is verified and accepted, the marijuana material is then separated out based upon characteristics and qualities. After the material has been separated, it is stored in our Prep/Storage Room until it is ready to be prepped for extraction. When the material is ready to be extracted, it is grated and grinned into an appropriate consistency, weighed and recorded, then placed into its appropriate extraction column. The column containing the marijuana material is then brought into the Extraction Room, connected to the extractor and begins the extraction process. After the extraction process, the concentrated-Cannabis is poured onto a sheet and placed into a vacuum oven. Once the concentrated-Cannabis has been properly purged, it will then be placed into appropriate, refrigerated storage cabinets for later packaging.

Pursuant to 3 AAC 306.750, Red Run will prepare marijuana for transport or transfer to another marijuana establishment by (1) placing packaged marijuana within a sealed, tamper-evident shipping container; (2) affixing a label in compliance with Alaska law [3 AAC 306.470] to the shipping container; and, (3) generating a transport manifest from the marijuana cultivation facility's marijuana inventory system. (NOTE: this transport manifest must remain with the marijuana at all times while being transported and a copy must be given to the licensed marijuana establishment that receives the shipment.) Any individual transporting marijuana in compliance with this section shall have a marijuana handler permit.

Pursuant to 3 AAC 306.750, when any marijuana or marijuana product is transported, the marijuana establishment that originates the transport shall use the marijuana tracking system to record the type, amount and weight of marijuana or marijuana product being transported, the name of the transporter, the time of departure and expected delivery, and the make, model and license plate number of the transporting vehicle. A complete printed transport manifest on a form prescribed by the board must be kept with the marijuana or marijuana product at all times.

Pursuant to 3 AAC 306.510, Red Run will not package, manufacture or sell any product that is an adulterated food or drink, closely resembles a familiar food or drink item including candy; or is packaged to look like candy, or in bright colors or with cartoon characters or other pictures or images that would appeal to children.

When Red Run packages its manufactured products for a retail marijuana store to sell to a consumer, the packaging will be designed/constructed in compliance with federal law [16 U.S.C. 1700+ known as the Poison Prevention Packaging Act], with the goal that it be significantly difficult for children under five years of age to open, while being not normally difficult for adults to use properly as defined by federal regulation [16 C.F.R. 1700.20].

Section 3 – Equipment and Compounds to be Used

Review the requirements under 3 AAC 306.555.

3.1. Describe the equipment and solvents, gases, chemicals, and other compounds the marijuana product manufacturing facility will use to create marijuana concentrates:

Red Run will utilize the following methods/techniques and equipment to process/create marijuana concentrated products:

(1) Closed loop, Butane extraction
(2) Closed loop, Ethanol extraction
(3) Rosin Press extraction
(4) Dry Sift extraction

Extraction Machinery:
1. MK4c Terpenator© - a closed loop hydrocarbon extractor, designed for Butane & Propane solvents. Professionally engineered, certified and tested.
2. Across International 7.5cuft AccuTemp Vacuum Ovens - professionally engineered, certified and tested vacuum ovens.
3. Bochi Roto-Evaporator - a closed loop ethanol extractor, professionally engineered, certified and tested.
4. Rosin Press - a "solvent-less" machine that utilizes heat and pressure to extract resin from Cannabis material.

Solvents:
1. Butane (N-Butane, Iso-Butane)
2. Food Grade Ethanol

Received by AMCO 1.25.19

Section 4 – Waste Disposal

Review the requirements under 3 AAC 306.740.

You must be able to certify the statement below. Read the following and then sign your initials in the box to the right: Initials

4.1. The marijuana product manufacturing facility shall give the board at least three days written notice required under 3 AAC 306.740(c) before making marijuana waste unusable and disposing of it. MT

4.2. Describe how you will store, manage, and dispose of any solid or liquid marijuana waste, including expired or outdated marijuana or marijuana product, in compliance with any applicable laws. Include details about the material(s) you will mix with ground marijuana waste and the processes that you will use to make the marijuana waste unusable for any purpose for which it was grown or produced:

Method of Disposal:
1. The facility collects, accounts for and weighs all remaining solid and liquid waste from its manufacturing practices (including expired or outdated marijuana or marijuana product). Waste material is dumped into specifically marked plastic waste bins, each bin is clearly labeled with the Metrc tag number and date the material was wasted from.

2. All critical information is then entered into the Metrc tracking/logging system. Waste bins are then tagged for disposal and labeled with the date of AMCO notification.

3. AMCO will be given notice not later than three days before making the waste unusable and disposing of it.

4. After giving AMCO at least 3 days notification, the waste bins tagged for disposal are then transferred to our waste disposal bin area located on premise within our exterior, fenced-in area. See Premise Diagram.

5. All solid waste will be broken down into small partitions, and mixed with a Compost-able Waste Mix consisting of old growing material, coconut coir, growstones, worm-castings, bat guano, Sulfur and other micro nutrients, including coffee grounds. The ratio of solid marijuana waste, including expired or outdated marijuana products to our Compost-able waste-mix will be approximately 50/50.

6. All liquid waste is mixed with our Compost-able Waste-Water Solution or simply mixed with liquid dish washing soap. The ratio of liquid marijuana waste, including expired or outdated marijuana products to our Compost-able Waste-Water Solution will be approximately 50/50.

7. Solid waste fit for compost will be transferred off-site to our worm farm. Any waste not fit for compost will be thrown into our Alaska Waste trash bin.

8. Liquid waste will be disposed of by pouring the waste down the drain in a manner consistent with DEC and local regulations.
Compost-stable Waste-Water Solution (Liquid Waste):
Water, Worm-castings, Soap, Sulfur.
Compost-stable Waste Mix (Solid Waste):
Coconut Coir, Growstones, Worm-castings, Bat Guano, Microbes, Sulfur and Coffee grounds.

Received by AMCO 1.24.19
Received by AMCO 1.25.19

Section 5 – Testing Procedure and Protocols

Review the requirements under 3 AAC 306.520 and 3 AAC 306.550.

You must be able to certify the statement below. Read the following and then sign your initials in the box to the right:	Initials
5.1. I will ensure that any individual responsible for collecting random samples for required laboratory testing under 3 AAC 306.455 will prepare the necessary accompanying signed statement, provide the signed statement to the marijuana testing facility, and maintain a copy as a business record under 3 AAC 306.755.	MT

Answer "Yes" or "No" to the following question:	Yes	No
5.2. Will the marijuana product manufacturing facility be performing in-house testing (as defined under 3 AAC 306.990(b)(20)?	☐	☑

If "Yes" to 6.2, you must be able to certify the statement below. Read the following and then sign your initials in the box:	Initials
5.3. The area where in-house testing will occur is clearly identified on the Form MJ-02: Premises Diagram that is submitted with this application.	

5.4. Describe the testing procedures and protocols the marijuana product manufacturing facility will follow:

When marijuana or a marijuana product is transported, Red Run will use Metrc to record the type, amount and weight of marijuana or marijuana product being transported, the name of the transporter, the time of departure and expected delivery, and the make, model. and license plate number of the transporting vehicle. A complete printed transport manifest on a form prescribed by the board will be kept with the marijuana or marijuana product at all times.

During transport. the marijuana or marijuana product will be in a sealed package or container and in a locked, safe, and secured storage compartment in the vehicle transporting the marijuana or marijuana product. The sealed package will not be opened during transport. The vehicle transporting marijuana or a marijuana product will travel directly from our manufacturing facility to the receiving marijuana establishment, and will not make any unnecessary stops in between (except to deliver or pick up marijuana or a marijuana product at another licensed marijuana establishment).

Pursuant to 3 AAC 306.550, Red Run will provide a sample of each marijuana product manufactured at the facility to a licensed marijuana testing facility, and will not sell or transport a marijuana product until all laboratory testing required under 3 AAC 306.645 has been completed.

In order to comply with 3 AAC 306.550 (a) of this section, Red Run will: (1) collect a random sample for testing by selecting a product from each production lot in an amount required by the marijuana testing facility; (2) designate an individual responsible for collecting each sample; that individual shall (A) prepare a signed statement showing that each sample has been randomly selected for testing; (B) provide the signed statement to the marijuana testing facility; and (C) maintain a copy as a business record under 3 AAC 306.755; and (3) transport the sample to the marijuana testing facility in compliance with 3 AAC 306. 750. (c) After collecting and transporting a sample for testing, Red Run will segregate the entire production lot from which the testing sample was selected until the marijuana testing facility reports the results from its tests. During this period of segregation, Red Run shall maintain the production lot in a secure, cool, and dry location to prevent the marijuana product from becoming contaminated or losing its efficacy. Red Run will not sell or transport any marijuana product from the segregated lot until the marijuana testing facility has completed its testing and analysis and provided those results, in writing, to Red Run. Red Run will maintain the testing results as part of its business records.

Received by AMCO 1.25.19

Section 8 – Prohibitions

Review the requirements under 3 AAC 306.510.

8.1. I certify that the marijuana product manufacturing facility will not: Initials

a. **sell, deliver, distribute, or transfer any marijuana, marijuana concentrate, or marijuana product directly to a consumer, with or without compensation;** MT

b. **allow any person, including a licensee, employee, or agent, to consume marijuana, marijuana concentrate, or marijuana product on the licensed premises; or** MT

c. **manufacture or sell any product that is an adulterated food or drink, closely resembles a familiar food or drink item including candy, or is packaged to look like candy, or in bright colors or with cartoon characters or other pictures or images that would appeal to children.** MT

I declare under penalty of unsworn falsification that this form, including all accompanying schedules and statements, is true, correct, and complete.

Section 6 – Proposed Marijuana Concentrates and Marijuana Products

Review the requirements under 3 AAC 306.520, 3 AAC 306.525, and 3 AAC 306.560.
Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.

Product Name:	Canna Cart (Vape Cartridge)		
Product Type:	Concentrate		
Perishable: Yes/No	No	**Shelf Life:** If perishable.	

Product Description: Details must include the color, shape, and texture.	Product will be in liquid form, its color will range from a light yellow color to dark amber color and will take the shape of its cartridge.
Ingredients: This box is not applicable to marijuana concentrates.	1. Cannabis Oil 2. True Terpenes 3. MCT Oil (Medium Chain Triglycerides) 4. Glycerin
Standard Production Procedure and Detailed Manufacturing Process:	Cannabis oil is extracted from Cannabis flower/trim using a certified, closed Butane loop extraction system. The concentrated oil is then placed into a vacuum oven to purge residual solvents to below regulated ranges (3 AAC 306.645). If necessary, Cannabis oil will be dewaxed by placing the Cannabis oil into a freezer for approximately 36 hours to separate plant waxes from the concentrated Cannabis oil. Finally the Cannabis oil is mixed with True Terpenes, and/or MCT oil and Glycerin to an appropriate consistency. The final solution is then used to fill empty cartridges.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.	

Section 7 – Proposed Product Packaging and Sample Labels

Review the requirements under 3 AAC 306.520, 3 AAC 306.565, and 3 AAC 306.570.
Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.

Product Name:	Canna Carts (Vape Cartridge)
Product Type:	Concentrate

Packaging Description:
Details must include the color(s), size, packaging materials used, total amount of THC, individual serving sizes (if multiple), and other specifics showing compliance with 3 AAC 306.565. Please include photos, drawings, or graphic representations.

Packaging Materials: (Wrapper) Clear mylar bag (heat sealed) w/ appropriate Red Run branded label attached.
Size (Mylar 1/8oz): 4" x 6" x 2.2"

Packaging Materials (Container):
Clear Glass vape cartridge
Size: .5ml - 1ml

Additional Packaging Option:
Packaging Materials (Wrapper): Red Coin Envelope sealed w/ appropriate Red Run branded label.
Size: 2 1/4" x 3 1/2"

Total Amount of THC = 40%-85%
Individual Serving Size = 1 Cartridge (.5g)

Total Amount of THC = 40%-85%
Individual Serving Size = 1 Cartridge (1g)

Sample Labels:
Provide sample labels showing how the labeling requirements set forth in 3 AAC 306.570 will be met.

Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.

Product Name:	Rosin		
Product Type:	Concentrate		
Perishable: Yes/No	No	**Shelf Life:** If perishable.	

Product Description: Details must include the color, shape, and texture.	Rosin has a bright golden yellow to amber color and can have a gooey to brittle consistency. Rosin is sticky and oily in nature. Rosin is soft and pliable.
Ingredients: This box is not applicable to marijuana concentrates.	Not Applicable.
Standard Production Procedure and Detailed Manufacturing Process:	A Rosin Press is at the center of rosin production, a machine responsible for producing controlled amounts of heat and pressure over short periods of time. To produce rosin, three components are required: heat, pressure, and time. The technique in rosin production rests within the ability to balance these three components together to create a superior product in flavor and effect. Cannabis flowers are screened, broken down and packaged into a small bindle, which is then placed into the Rosin Press onto heated plates, pressure is then applied to the plates and the rosin is squeezed out and collected.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.	**Rosin**

Section 7 – Proposed Product Packaging and Sample Labels

Review the requirements under 3 AAC 306.520, 3 AAC 306.565, and 3 AAC 306.570.
Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.

Product Name:	Rosin
Product Type:	Concentrate

Packaging Description:
Details must include the color(s), size, packaging materials used, total amount of THC, individual serving sizes (if multiple), and other specifics showing compliance with 3 AAC 306.565. Please include photos, drawings, or graphic representations.

Packaging Materials: (Wrapper) Clear mylar bag (heat sealed) w/ appropriate Red Run branded label attached.
Size (Mylar 1/8oz): 4" x 6" x 2.2"

Packaging Materials (Container): Red Silicon Container w/ Red Run Branded Logo.
Size: 22mm x 15mm

Additional Packaging Option:
Packaging Materials (Wrapper): Red Coin Envelope sealed w/ appropriate Red Run branded label.
Size: 2 1/4" x 3 1/2"

Total Amount of THC = 40%-85%
Individual Serving Size = .5g

Total Amount of THC = 40%-85%
Individual Serving Size = 1g.

Sample Labels:
Provide sample labels showing how the labeling requirements set forth in 3 AAC 306.570 will be met.

Product Name:	Canna Caps		
Product Type:	Edible		
Perishable: Yes/No	Yes	**Shelf Life:** If perishable.	Up to 2 year.

Product Description: Details must include the color, shape, and texture.	Our Cannabis-infused capsules will contain an individual 5mg serving. Cannabis-oil, infused with Coconut-oil will be injected into vegetable-based gelatin capsules. The product's color will range from golden yellow to dark brown. The Cannabis-infused oil will take on the shape of the capsule and will have a soft, oily texture.
Ingredients: This box is not applicable to marijuana concentrates.	1. Decarboxylated Cannabis Oil 2. Coconut Oil 3. Lecithin
Standard Production Procedure and Detailed Manufacturing Process:	Heat will be applied to the Coconut oil to render it in liquid form. Lecithin is then added to the liquid Coconut oil. Decarboxylated Cannabis oil is heated and combined with Coconut oil and mixed together in a manner ensuring even distribution. The final product will be placed into individual gelatin capsules and packaged together.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.	**Cannabis-infused Capsules**

Product Name:	Hash Gummies		
Product Type:	Edible		
Perishable: Yes/No	Yes	**Shelf Life:** If perishable.	Up to 1 year.

Product Description: Details must include the color, shape, and texture.	The gummy will be RED in color. The product will be shaped into our Red Run brand "mark", which are the double "R"s. The product's texture will be elastic, soft and smooth.

Ingredients: This box is not applicable to marijuana concentrates.	1. Water 2. Fruit Juice (Cherry, Raspberry, Strawberry) 3. Gelatin 4. Glycerin 5. MCT Oil 6. Decarboxylated Cannabis Oil 7. Stevia 8. Salt

Standard Production Procedure and Detailed Manufacturing Process:	Decarboxylated Cannabis oil is mixed with Glycerin and MCT oil. Honey, water, fruit juice, salt and Stevia are mixed together separately. The decarboxylated Cannabis oil mixture is then combined with the sweetened fruit juice solution. Gelatin is then added to the final mixture to create a gelatin-like substrate which is then used to fill custom RR molds.

Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.	 *Center line denotes the Demarcation line embedded within the middle of each gummy. Each piece, the Left "R" and the Right "R" are an individual serving size of 5mg.
