Alaska Marijuana Control Board

Operating Plan Supplemental
Form MJ-05: Marijuana Product Manufacturing Facility

What is this form?

This operating plan supplemental form is required for all applicants seeking a marijuana product manufacturing facility license and must accompany **Form MJ-01: Marijuana Establishment Operating Plan**, per 3 AAC 306.020(b)(11). Applicants should review **Chapter 306: Article 5** of the **Alaska Administrative Code.** This form will be used to document how an applicant intends to meet the requirements of the statutes and regulations.

If your business has a formal operating plan, you may include a copy of that operating plan with your application, but all fields of this form must still be completed per 3 AAC 306.020 and 3 AAC 306.520(3).

What additional information is required for cultivation facilities?

Applicants must identify how the proposed establishment will comply with applicable regulations regarding the following:

- Equipment, compounds, and processes to be used
- Waste disposal
- Testing procedure and protocols
- Proposed marijuana concentrates and marijuana products
- Proposed product packaging and sample labels
- Prohibitions

This form must be completed and submitted to AMCO's main office before any new or transfer application for a marijuana product manufacturing facility or marijuana concentrate manufacturing facility license will be considered complete.

Section 1 – Establishment Information

Enter information for the business seeking to be licensed, as identified on the license application.

Licensee:	GUEST SERVICES, LLC.	**MJ License #:**	21022		
License Type:	Marijuana Concentrate Manufacturing Facility				
Doing Business As:	Choice Extracts				
Premises Address:	12668 W. Westen Drive				
City:	Houston	**State:**	Alaska	**ZIP:**	99694

AMCO Received 1/3/2020

Section 2 – Overview of Operations

2.1. Provide an overview of your proposed facility's operations. Include information regarding the intake, flow, and transfer of marijuana, marijuana concentrate, and marijuana product at and from your premises:

Licensees, employees, or agents receiving marijuana in our extraction facility will anticipate it's arrival based on transfer manifest and communication with driver. When transfer has arrived, transporter will have their handlers card checked and be signed into our sign in log prior to entering the restricted access area, and have a visitors tag assigned and displayed at all times while in the facility. All transfers of marijuana into the extraction facility will be conducted and received within the extraction facility. Immediately upon arrival of a transfer of marijuana, the weight of the marijuana will be be verified and, barring any discrepancies, the manifest will be signed and the date and time notated and the transfer will be accepted in METRC. After the mj has been checked in it will be moved to our storage area or taken to the work area for immediate use. Internal tracking systems, such as package tracking and production batch logs, will be utilized to record information about each production batch from bud or trim to final product. Additionally, METRC will be updated, and packages will be adjusted and created as product is extracted and produced. In house tracking data and METRC entries will be kept up to date and current. A closed loop passive extraction system will be utilized using ice or dry ice to move the gas (butane or butane/propane mixed gas) through the sleeve where the material is housed extracting the thc and other cannabinoids then using warm water to move the gas back through , beginning the purge of the concentrates then it goes to the vacume oven at a set temperature and pressure to reach the desired outcome. After the product has achieved final state, a sample from the production batch will be sent to the lab for testing. After testing it will be weighed again and a package will be produced within METRC. From that package, product may be repackaged in to bulk wholesale packages, or additional packages of prepackaged product may be produced within METRC. When an order is placed from a retailer or a product manufacturing facility, the appropriate quantity will be packaged into a separate package within METRC and a manifest created reflecting the outgoing transfer. The quantity and weight will be double checked by the receiving party or the delivering agent, and signed for on the manifest. Product will leave our facility in tamper evident, locked containers, with a manifest inside the shipping container and the driver being given an additional copies to have on hand during transport.

Section 3 – Equipment and Compounds to be Used

Review the requirements under 3 AAC 306.555.

3.1. Describe the equipment and solvents, gases, chemicals, and other compounds the marijuana product manufacturing facility will use to create marijuana concentrates:

Dabs (being marketed under product names: shatter, badder, crumble was, sauce, sugar wax, and diamonds) will be produced by use of a closed loop extraction system, wherein ice or dry ice will be used to move gas (butane, isobutane, or propane butane mix) through a sleeve housing marijuana, stripping the THC and other cannabinoids from the plant material. Hot water will be used to move the gas back through the system, beginning the purge process. The resulting material will be moved to a vacume oven where the product is held at a low to medium heat in a vacume chamber to continue to purge the remaining gasses from the product. The time the product remains in purge may vary and will be up to licensee to use skill and experience to determine when it is "done." Many variables can factor into the time required to purge or the end result/color and consistency of the final product. These factors include but are not limited to strain, cannabinoid profile, terpine profile, and technician handling. Once the product has finished purging, a technician can make a determination as to how to identify the dab and which product name to assign (i.e. badder, crumble, diamonds) based on the final color and consistency of the product.

Distillates will be produced through the use of a short path distillate system will be used for material that has be soaked in ethanol, called crude. Once distilled will be combined with Terpenes to become consumable product.

In producting Solventless products, Material (flower/trim) will go through an ice water bath before being filtered through a screen and turned into water hash. Then the product will be extracted mechanically through the use of heat and pressure (rosin press), and purged in a vacume oven until the desired consistency is obtained.

AMCO Received 1/3/2020

Section 4 – Waste Disposal

Review the requirements under 3 AAC 306.740.

You must be able to certify the statement below. Read the following and then sign your initials in the box to the right: Initials

4.1. The marijuana product manufacturing facility shall give the board at least three days written notice required under 3 AAC 306.740(c) before making marijuana waste unusable and disposing of it. JG

4.2. Describe how you will store, manage, and dispose of any solid or liquid marijuana waste, including expired or outdated marijuana or marijuana product, in compliance with any applicable laws. Include details about the material(s) you will mix with ground marijuana waste and the processes that you will use to make the marijuana waste unusable for any purpose for which it was grown or produced:

Marijuana and Marijuana product will be inspected visually for quality on a routine basis as well as expirations (if and where applicable) monitored routinely within the inventory tracking system. If expired, outdated, or compromised product is found, it will be quarantined from the other products until it can be disposed of or reprocessed. Liquid waste and solid wastes will be stored in waste bins. As waste is added to the bins it will be notated on our waste logs and within METRC. AMCO will be notified three days before final disposal of any marijuana or marijuana products. All products will be disposed of within DEC compliant methods. Marijuana waste will be ground and mixed in a 50/50 blend with newspaper, coffee grounds, or organic household waste.

AMCO Received 1/3/2020

Section 5 – Testing Procedure and Protocols

Review the requirements under 3 AAC 306.520 and 3 AAC 306.550.

You must be able to certify the statement below. Read the following and then sign your initials in the box to the right:	Initials
5.1. I will ensure that any individual responsible for collecting random samples for required laboratory testing under 3 AAC 306.550 will prepare the necessary accompanying signed statement, provide the signed statement to the marijuana testing facility, and maintain a copy as a business record under 3 AAC 306.755.	JG

Answer "Yes" or "No" to the following question:	Yes	No
5.2. Will the marijuana product manufacturing facility be performing in-house testing (as defined under 3 AAC 306.990(b)(20)?	☐	☑

If "Yes" to 5.2, you must be able to certify the statement below. Read the following and then sign your initials in the box:	Initials
5.3. The area where in-house testing will occur is clearly identified on the Form MJ-02: Premises Diagram that is submitted with this application.	

5.4. Describe the testing procedures and protocols the marijuana product manufacturing facility will follow:

After a production batch is produced a representative sample will be pulled, packaged, and sent to a licensed testing facility. The production batch will be segregated until such a time as the labs clear testing. A random sampling statement will accompany the product to the lab and a copy of the labs will be provided with each wholesale purchase and will be maintained in our records.

AMCO Received 1/3/2020

Section 6 – Proposed Marijuana Concentrates and Marijuana Products

Review the requirements under 3 AAC 306.520, 3 AAC 306.525, and 3 AAC 306.560.

Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.

Product Name:	Shatter		
Product Type: Choose one.	Marijuana Concentrate		
Perishable: Yes/No	Yes	**Shelf Life:** If perishable.	N/A
Intended Use: Smokable/ edible/topical/wholesale/etc.	smoke or vaporize; for inhalation		

Product Description: Details must include the color, shape, and texture.	translucent, stable glass like consistency that breaks or "shatters" color ranging from light yellow to dark amber
Ingredients:	
Standard Production Procedure and Detailed Manufacturing Process:	Shatter will be produced with a closed loop extraction system- ice or dry ice will be used to move gas through a sleeve housing marijuana, which will strip THC and other cannabinoids from the plant material. Hot water will be used to move the gas back through the system, beginning the purge process. The resulting material will be moved to a vacume oven where the product is held at a low to medium heat in a vacume chamber, continuing to purge remaining gasses from the product. The time the product remains in purge may vary and will be up to licensee or technician to use skill and experience to determine when it is "done." If the consistency of the final product is stable and solid, breaking or shattering like glass when snapped it shall be identified as shatter.
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.	
AMCO Received 1/3/2020

Section 7 – Proposed Product Packaging and Sample Labels

Review the requirements under 3 AAC 306.520, 3 AAC 306.565, and 3 AAC 306.570.
Attach a completed copy of this page for each proposed marijuana concentrate or marijuana product.

Product Name:	Shatter
Product Type:	Marijuana Concentrate

Packaging Description: Details must include the color(s), size, packaging materials used, total amount of THC, individual serving sizes (if multiple), and other specifics showing compliance with 3 AAC 306.565. Please include photos, drawings, or graphic representations.

Shatter will be packaged for retail sales in a 5mL glass, screw top opaque, container; wrapped in tissue paper; enclosed and sealed in a tamper evident, child resistant, box-approximately 1.75" x 1.75" in size; labeled in accordance with 3 AAC 306.565.

Sample Labels: Provide sample labels showing how the labeling requirements set forth in 3 AAC 306.570 will be met.

Marijuana has intoxicating effects and may be habit forming and addictive. Marijuana impairs concentration, coordination, and judgment. Do not operate a vehicle or machinery under its influence. There are health risks associated with consumption of marijuana. For use only by adults twenty-one and older. Keep out of the reach of children. Marijuana should not be used by women who are pregnant or breast feeding.

Product Description: Details must include the color, shape, and texture.	syringe of distilled cannabis oil. Translucent gold in color
Ingredients:	N/A-
Standard Production Procedure and Detailed Manufacturing Process:	Distillate will be produced with a closed loop extraction system- ice or dry ice will be used to move gas through a sleeve housing marijuana, which will strip THC and other cannabinoids from the plant material. Hot water will be used to move the gas back through the system, beginning the purge process. The resulting material will be moved to a vacume oven where the product is held at a low to medium heat in a vacume chamber, continuing to purge remaining gasses from the product. The time the product remains in purge may vary and will be up to licensee or technician to use skill and experience to determine when it is done. **Processed material will then go into an ethanol bath; material will be sifted/strained out of ethanol; after ethanol has evaporated a crude oil will remain; crude will be run through our filtration process; once filtered, the terpenes will be re-added and the final product will be transferred into containers for holding for future use or glass syringes for sale**
Depiction: Provide a photograph, drawing, or graphic representation of the expected appearance of the final product.
