NOTES TO USERS

The map is to be used in administering the National Flood Insurance Program. It does not, however, represent the official boundary or limits of a community. Individuals or businesses desiring to establish a corporate limit or boundary should consult local community officials for that information.

To obtain more detailed information in areas where Flood Insurance Studies (FIS) are ongoing, users are encouraged to contact the Federal Emergency Management Agency (FEMA), Regional Flood Insurance Study Office, 1000 North Nova Road, Suite 310, Raleigh, NC 27608, phone (919) 585-2411, or visit the FEMA website at http://www.fema.gov. In addition, the FIS report for this community can usually be obtained from the local community.

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of structures and development. Floodway areas are depicted on FIRM panels with a heavy black line for the channel and a heavy dotted line for the floodplain. Certain areas not in Special Flood Hazard Areas may be protected by flood control structures. For information on available products associated with this FIRM visit the FEMA website at http://www.fema.gov.

For information regarding conversion of flood profile baselines, please refer to the Flood Insurance Study Report (which contains authoritative hydraulic data) that accompanies this FIRM.

The hydraulic modeling baselines used to draw flood profiles on this FIRM were derived from multiple sources. Base Flood Elevations and other pertinent floodway data are provided in the Flood Insurance Study Report. Floodway widths and/or Summary of Stillwater Elevations tables contained in the Flood Insurance Study Report should not be used as the sole source of flood elevation information. Accordingly, the hydraulic modeling baselines used in this FIRM may differ from what is shown on the map. These differences do not affect the accuracy of this FIRM.

Base Flood Elevations depicted on this map represent the hydraulic modeling baselines. These differences do not affect the accuracy of this FIRM. The FIS report issued for this community contains a summary of the hydraulic data that was used to develop the Base Flood Elevations and floodway widths depicted on this map. The hydraulic modeling baselines used to draw flood profiles on this FIRM were derived from multiple sources. Base Flood Elevations and other pertinent floodway data are provided in the Flood Insurance Study Report. Floodway widths and/or Summary of Stillwater Elevations tables contained in the Flood Insurance Study Report should not be used as the sole source of flood elevation information. Accordingly, the hydraulic modeling baselines used in this FIRM may differ from what is shown on the map. These differences do not affect the accuracy of this FIRM.

Vertical Datum of 1988, visit the National Geodetic Survey website at http://www.ngs.noaa.gov. Differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

To obtain current elevation, description, and/or location information for an overview map of the community, visit the FEMA website at http://www.fema.gov.

Census center (FIRMS) products are now available for free on the FEMA website at http://www.fema.gov. Many of these products can be ordered as printed bound sets or for digital versions of this map. Many of these products can be ordered as printed bound sets or for digital versions of this map.

To obtain current elevation, description, and/or location information for Base Flood Elevations, please refer to the separately printed FEMA Flood Insurance Study Report, which contains authoritative hydraulic data and is located.

For information on available products associated with this FIRM visit the FEMA website at http://www.fema.gov. Available products may be ordered or downloaded in digital format by visit the FEMA website at http://www.fema.gov.
