NARRATIVE AND MATHEMATICAL CALCULATION OF POPULATION TOTALS

Petitioner visited approximately 91 residential units (door to door) within a 1 mile radius of the proposed licensed premises. Many of the residential units were in multi-family or apartment buildings. Out of the 91 residential units visited, petitioner obtained 75 signatures from permanent residents over the age of 21. Attached is a map reflecting the 1 mile radius where signatures were obtained.

Statistical Information from Census Bureau, Wikipedia and other online sources (attached):

Total Sq. Miles for Delta Junction: 13.88

Total Sq. Miles in a 1 mile radius: 3.14

Total Population over 21 in Delta Junction: Approximately 605

Mathematical Calculation:

13.88 total sq. miles in the City of Delta Junction

3.14 square miles in a 1 mile radius of the proposed license location

3.14 square miles is 22.6 percent of 13.88 square miles.

$605 \times 22.6\% = 136.73$ people over 21 within 1 mile radius

$136.73 \times 51\% = 69$ people total required signatures

History

For at least 10,000 years, Athabascan Indians have inhabited portions of the interior of Alaska. Early inhabitants survived by hunting and fishing.

The early history of non-native settlement in the area occurred at the river crossing at Big Delta and is found at the entry, Big Delta, Alaska. In 1904, the town first served as a telegraph station. In 1928, a herd of 23 bison were brought from the National Bison Range in Montana to an area south of Big Delta to provide an additional game species for hunters. Buffalo Center, a small community near the center of present-day Delta Junction, was named because of their presence, especially during the winter months. The huge animals were troublesome, and sometimes made landings dangerous at nearby Allen Army Airfield.

The herd is now kept at several hundred animals by the annual issuance of hunting permits. In the early 1980s, the 90,000-acre (360 km²) Delta Junction Bison Range, south of the Alaska Highway and between Ft. Greely and the Little Gerstle River was established; the range is now managed by the Alaska Department of Fish and Game to provide fall habitat for bison to reduce farm depredations and to provide habitat for other wildlife.

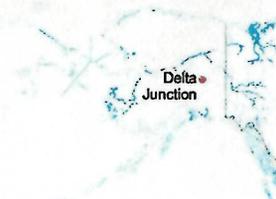

During World War II, the United States aided the Soviet Union against Germany by sending airplanes and supplies authorized by the Lend-lease Act to the Soviet Union through Alaska into the Russian Far East. The Alaska Highway was built to connect an existing road in Dawson Creek, British Columbia, Canada, with the Richardson Highway in Alaska, a distance of 2,290 km (1,420 mi).

The Alaska Highway met the Richardson Highway at a point 12 km (7.5 mi) south along the Delta River from Big Delta. The place where the highways met became known as Delta Junction. Allen Army Airfield was constructed 5 miles (8.0 km) south of Delta Junction for use in sending supplies to Russia. The Glenn Highway was built from Anchorage to what is now Glennallen, where it met the Richardson Highway. This connection created a motor route between Anchorage and Fairbanks, Alaska.

2013-2017 American Community Survey 5-Year Estimates

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units for states and counties.

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Technical Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Explanation of Symbols:

An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
 An 'N' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
 An 'L' entry in the estimate column indicates that the median falls in the lowest interval of an open-ended distribution.
 An 'U' following a median estimate means the median falls in the upper interval of an open-ended distribution.
 An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
 An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
 An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
 An '(X)' means that the estimate is not applicable or not available.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

The age dependency ratio is derived by dividing the combined under-18 and 65-and-over populations by the 18-to-64 population and multiplying by 100.

The old-age dependency ratio is derived by dividing the population 65 and over by the 18-to-64 population and multiplying by 100.

The child dependency ratio is derived by dividing the population under 18 by the 18-to-64 population and multiplying by 100.

When information is missing or inconsistent, the Census Bureau logically assigns an acceptable value using the response to a related question or questions. If a logical assignment is not possible, data are filled using a statistical process called allocation, which uses a similar individual or household to provide a donor value. The "Allocated" section is the number of respondents who received an allocated value for a particular subject.

While the 2013-2017 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.
