Subject: Comment on MCB Draft Regs
Date: Friday, January 13, 2017 3:34:19 PM

Hello,

I would like to offer a comment on the draft regulations for testing requirements. I am happy to see the proposal to add language about a visual foreign matter inspection. I believe this change will help protect public safety. However as a member of the quality control part of this industry, I would request some clarification. Currently the language is being added to 306.660(a). On our end it would be clearer to add the language to 306.645(b), and to include any further details or references the state may deem relevant. This is where the other testing requirements are spelled out. Since multiple testing facilities will be operating, this would also help prevent the possibility of a less stringent visual inspection being advantageous from a business competition point of view.

Thank you for your consideration,

Jonathan
